<Site Number>

Dear <Name>:

The health of Florida's communities and livability of our neighborhoods depend on a clean environment. Safeguarding the health of Florida's residents and the environment is a priority for the Florida Department of Environmental Protection (DEP).

To protect public health, the DEP notifies property owners of pollution found on their property or in their neighborhood. In a previous letter, the DEP notified you of pollutants on or near your property. This letter is to inform you that the DEP has received additional information that pollutants were found in the ground water at properties in your area. This letter adds information to the one previously sent to you and does not replace it. The enclosed table lists the specific pollutants found during an assessment of the following site:

<PAWSRWIPTTC – Including Site ID#>

Florida's water quality standards are among the most protective in the nation. There is little or no risk of exposure for residences and businesses connected to a public water supply system. While this notification does not necessarily mean that pollutants are on your property, residences and businesses using a private drinking water well that has not been tested within the past three years, should have the water sampled by your County Health Department or a private laboratory. Irrigation wells should not be used for drinking water.

Notification Letter

<Date>

To assist you in understanding this information and to answer any questions, the DEP and DOH have established two toll-free information lines where you may leave a recorded message and receive a call back within one business day. To post your health-related questions, please call the DOH toll-free number at **1-877-798-2772**. If you have questions concerning the cleanup of this site, please call the DEP toll-free number at **1-866-282-0787**. **Please refer to this letter and the above site information in your recorded message.**

If this letter has reached you in error, please notify us at the DEP toll-free number above so that we may contact the correct owner. If tenants are residing at this property, please share this information with them.

This notification process is one of many steps that DEP is taking to address pollution, protect natural systems and safeguard public health. If you have any questions about this notice, the pollutants detected or your health, please contact us at one of the above exclusive information lines.

Sincerely,

A handwritten signature in red ink, appearing to read "Mary Jean Yon". The signature is fluid and cursive, with the first name "Mary" and last name "Yon" clearly distinguishable.

Re: <Property Address>

<City, State Zip>

<Site Number>

Dear <Name>:

The health of Florida's communities and livability of our neighborhoods depend on a clean environment. Safeguarding the health of Florida's residents and the environment is a priority for the Florida Department of Environmental Protection (DEP).

To protect public health, the DEP notifies property owners of pollution found on their property or in their neighborhood. In a previous letter, the DEP notified you of pollutants on or near your property. This letter is to inform you that the DEP has received additional information that certain pollutants were found in the ground water and soil at your property and other pollutants were found in the soil in your area. This letter adds information to the one previously sent to you and does not replace it. The enclosed tables list the specific pollutants found during an assessment of the following site:

<PAWSRWIPTTC – Including Site ID#>

The first table represents samples taken on your property and includes the location and the levels of the specific pollutants found. Applicable cleanup target levels, which the DEP uses as a guide for cleaning up chemicals at waste sites, are also listed for each detected pollutant. These levels are based on health risks or taste and odor concerns in the water. The second table lists other pollutants found in the area but not in samples taken from your property.

Notification Letter

<Date>

Page Two

Florida's water quality standards are among the most protective in the nation. There is little or no risk of exposure for residences and businesses connected to a public water supply system.

Residences and businesses using a private drinking water well that has not been tested within the past three years, should have the water sampled by your County Health Department or a private laboratory. Irrigation wells should not be used for drinking water.

You can reduce the risk of exposure to soil pollutants by thoroughly washing your hands after gardening, playing or working in the yard. Covering an impacted area with clean soil or a layer of mulch such as pine straw or leaves provides an additional safeguard.

To assist you in understanding this information and to answer any questions, the DEP and DOH have established two toll-free information lines where you may leave a recorded message and receive a call back within one business day. To post your health-related questions, please call the DOH toll-free number at **1-877-798-2772**. If you have questions concerning the cleanup of this site, please call the DEP toll-free number at **1-866-282-0787**. **Please refer to this letter and the above site information in your recorded message.**

If this letter has reached you in error, please notify us at the DEP toll-free number above so that we may contact the correct owner. If tenants are residing at this property, please share this information with them.

This notification process is one of many steps that DEP is taking to address pollution, protect natural systems and safeguard public health. If you have any questions about this notice, the pollutants detected or your health, please contact us at one of the above exclusive information lines.

Sincerely,

A handwritten signature in dark ink, appearing to read "Mary Jean Yon". The signature is fluid and cursive, with a large initial "M" and "J".

Mary Jean Yon, Director
Division of Waste Management
