

Cover Sheet for

## Environmental Chemistry Method

***Pesticide Name:*** Iodosulfuron + Metsulfuron methyl

***MRID#:*** 451085-22

***Matrix:*** Water

***Analysis:*** LC/MS/MS

This method is provided to you by the Environmental Protection Agency's (EPA) Environmental Chemistry Laboratory (ECL). This method *is not* an EPA method but one which was submitted to EPA by the pesticide manufacturer to support product registration. EPA recognizes that the methods may be of some utility to state, tribal, and local authorities, but makes no claim of validity by posting these methods. Although the Agency reviews *all* Environmental Chemistry Methods submitted in support of pesticide registration, the ECL evaluates only about 30% of the currently available methods in the laboratory. Most methods perform satisfactorily but some, particularly the older methods, have deficiencies. Moreover, the print quality of the methods varies considerably because the methods originate from different sources. Therefore, the methods offered represent the best available copies.

If you have difficulties in downloading the method, or further questions concerning the methods, you may contact Elizabeth Flynt at 228-688-2410 or via e-mail at [flynt.elizabeth@epa.gov](mailto:flynt.elizabeth@epa.gov).

**SUMMARY****Enforcement Method of Iodosulfuron-methyl-sodium and its metabolite  
Metsulfuron-methyl in Surface Water by HPLC incl. Validation****Extension of the enforcement method EM F 01/98 - 0 for Iodosulfuron-methyl-  
sodium in Drinking Water to its metabolite Metsulfuron-methyl incl. Validation****Iodosulfuron-methyl-sodium (AE F115008)  
Metsulfuron-methyl (AE F075736)****Relevant residue**Iodosulfuron-methyl-sodium (AE F115008)  
Metsulfuron-methyl (AE F075736)**Test commodity**Drinking water  
Surface water**Principle of the method**

Metsulfuron-methyl in drinking water:

The water sample is adjusted to pH 2.5 with phosphoric acid (2 N) and sucked through an C18-cartridge (conditioned with 5 mL methanol and 5 mL water). AE F075736 is eluated with 5 mL methanol. Metsulfuron-methyl in the final solution in acetonitrile/water (1/1, v/v) is determined by HPLC/UV.

Metsulfuron-methyl and Iodosulfuron-methyl-sodium in surface water:

The water sample is adjusted to pH 2.5 with phosphoric acid (2 N) and filtered through a glass microfibre filter and a cellulose nitrate filter (0.45 µm). The sample is sucked through a NH<sub>2</sub> / C18-cartridge (conditioned with 5 mL methanol and 5 mL water). AE F115008 and AE F075736 are eluated with 15 mL methanol/water (60:40, v/v). After reducing to dryness, the residue is dissolved in 20 mL toluene and sucked through a Silicagel-cartridge (conditioned with 5 mL toluene). AE F115008 and AE F075736 are eluted with 30 mL toluene/methanol (95:5, v/v). Iodosulfuron-methyl-sodium and metsulfuron-methyl in the final solution in acetonitrile/water (1/1, v/v) are determined by HPLC/UV.

**Calibration**

A curve of the form  $y = a + bx + cx^2$  is applicable over the tested range of 0.1 to 2.0 µg metsulfuron-methyl/mL and 0.1 to 2.0 µg Iodosulfuron-methyl-sodium/mL.

**Recovery efficiency, relative standard deviation (RSD)**

Recovery experiments were conducted at 0.1 µg/L and 1.0 µg/L for AE F075736 in drinking water and at 0.1 µg/L and 1.0 µg/L for AE F075736 and AE F115008 in surface water.

The mean recoveries for AE F075736 in drinking water were found at 79 and 92 %, with an RSD of up to 9 %.

In surface water the mean recoveries for AE F075736 were found at 85 and 105 %, with an RSD of up to 10 %, the confirmation method gave mean recovery values of 92 and 106 %, with an RSD of up to 18 %.

In surface water the mean recoveries for AE F115008 were found at 92 and 103 %, with an RSD of up to 9 %, the confirmation method gave mean recovery values of 85 and 96 %, with an RSD of up to 20 %.

The results are summarized in the table below.

**Limit of quantification**

The limit of quantification (LOQ) for metsulfuron-methyl in drinking water was established and validated at 0.1 µg/L.

The limit of quantification (LOQ) for idosulfuron-methyl-sodium and metsulfuron-methyl in surface water was established and validated at 0.1 µg/L.

**Specificity**

Control samples of drinking water were analysed for AE F075736 and control samples of surface water were analysed for AE F115008 and AE F075736. In none of the samples apparent residues were determined.

The specificity of the method was demonstrated by a confirmatory technique using a HPLC column with a different stationary phase.

**Summary table of recoveries:**

Analyte	Matrix	Fortification level [µg/L]	Recovery [%]	Mean recovery [%]	RSD (a) [%]	n
AE F075736	Drinking water (Vittel)	0.10	82, 75, 87, 83, 70	79	9	5

HPLC

**Iodosulfuron-methyl-sodium and metsulfuron-methyl in surface water**

*Extraction  
AE F115008 and  
AE F075736 and  
NH2 / C18-cartridge  
clean-up*

1000 mL water  
is adjust to pH 2.5 with phosphoric acid (2 N),  
filtered through a glass microfibre filter and a cellulose nitrate filter (0.45 µm)  
the sample is sucked through a Chromabond 500 mg NH2 / 500 mg C18-cartridge  
(conditioned with 5 mL methanol and 5 mL water)  
with a flow rate of ca. 10 – 20 mL/min

Wash used glassware with 200 mL Millipore water  
and suck the washing water through the cartridge.

Suck the NH2 / C18-cartridge to dryness within ca. 5 min.

Wash the NH2 / C18-cartridge with 10 mL methanol/water (30:70, v/v).

Eluate AE F115008 and AE F075736 with 15 mL methanol/water (60:40, v/v)

Reduce the eluate to dryness using a vacuum rotary evaporator  
(bath temperature ca. 50 °C).

*Silicagel-cartridge  
clean-up*

Dissolve the residue in 20 mL toluene (if necessary use an ultrasonic bath)  
suck through a Silicagel-cartridge (conditioned with 5 mL toluene)

Discard the eluate, suck the Silicagel-cartridge to dryness

Wash the round-bottom flask with 30 mL toluene/methanol (95:5, v/v)  
and elute AE F115008 and AE F075736 with this solution  
Reduce the eluate to dryness using a vacuum rotary evaporator  
(bath temperature ca. 40 °C).

*HPLC*

Dissolve the residue in 1.0 mL water/acetonitrile (1/1, v/v) for quantification with  
UV/HPLC

Start of analysis: 22 Nov 1999  
End of analysis: 25 Jan 2000

## 2 Objectives

The objective of this study was the development and validation of an analytical method for the determination of residues of metsulfuron-methyl (AE F 075736) in drinking water and metsulfuron-methyl (AE F075736) and iodosulfuron-methyl-sodium (AE F115008) in surface water by HPLC using UV-detection.

The validation for AE F115008 in drinking water is given in the analytical method EM F 01/98 – 0 (ref. 1).

## 3 Test commodities

The drinking water used for the validation was Vittel.

The samples of surface water used for the validation were taken from the small lake at building F821 (Industriepark Höchst).

The characteristics <sup>1</sup> of the surface water are:

pH	7.90 ± 0.02
DOC [mg/L] <sup>1</sup>	7.3 ± 0.3
total hardness [° dH] <sup>2</sup>	10.1

<sup>1</sup> dissolved organic content

<sup>2</sup> degree german hardness [mg CaO+MgO / 100 mL water]

## 4 Relevant residue and reference substances

### 4.1 Relevant residue

The relevant residue consists of the metabolite metsulfuron-methyl (AE F075736) and the parent compound iodosulfuron-methyl-sodium (AE F115008).

<sup>1</sup> Determination of the characteristics of the surface water was not done under GLP.

**4.2 Test and reference substances**
**Iodosulfuron-methyl-sodium (AE F115008)**

Chemical name (IUPAC): methyl 4-iodo-2-[3-(4-methoxy-6-methyl-1,3,5-triazin-2-yl)ureido-sulfonyl]benzoate, sodium salt

Empirical formula:  $C_{14}H_{13}IN_5NaO_6S$

Molecular weight: 529.3

Solubility (20 °C):

Solvent	Solubility	Source
acetone	> 380 g/L	ref. 2
dichloromethane	> 500 g/L	ref. 2
ethyl acetate	23 g/L	ref. 2
n-hexane	$1.2 \cdot 10^{-3}$ g/L	ref. 2
methanol	12 g/L	ref. 2
n-heptane	$1.1 \cdot 10^{-3}$ g/L	ref. 2
2-propanol	4.4 g/L	ref. 2
toluene	2.1 g/L	ref. 2
acetonitrile	52 g/L	ref. 2
DMSO	> 500 g/L	ref. 2
PEG	87 g/L	ref. 2

Structural formula:

Certificate of analysis: AZ 07931

## 5 Procedures

### 5.1 Principle of analytical method

The method flow sheets are presented in Appendix I.

**Metsulfuron-methyl in drinking water:**

The water sample is adjusted to pH 2.5 with phosphoric acid (2 N) and sucked through an C18-cartridge (conditioned with 5 mL methanol and 5 mL water). AE F075736 is eluted with 5 mL methanol. AE F075736 in the final solution in acetonitrile/water (1/1, v/v) is determined by HPLC/UV.

**Metsulfuron-methyl and iodosulfuron-methyl-sodium in surface water:**

The water sample is adjusted to pH 2.5 with phosphoric acid (2 N) and filtered through a glass microfibre filter and a cellulose nitrate filter (0.45 µm). The sample is sucked through a NH<sub>2</sub> / C18-cartridge (conditioned with 5 mL methanol and 5 mL water). AE F115008 and AEF075736 are eluted with 15 mL methanol/water (60:40, v/v). After reducing to dryness, the residue is dissolved in 20 mL toluene and sucked through a Silicagel-cartridge (conditioned with 5 mL toluene). AE F115008 and AE F075736 are eluted with 30 mL toluene/methanol (95:5, v/v). AE F115008 and AE F075736 in the final solution in acetonitrile/water (1/1, v/v) are determined by HPLC/UV.

### 5.2 Reagents

- methanol Chromasolv, cat. No. 34860 (Riedel-de Haën, Germany)
- acetonitrile Chromasolv p.A., cat. No. 34851 (Riedel-de Haën, Germany)
- deionized water
- water (e.g. prepared with Milli-Q-Plus, Millipore)
- phosphoric acid 2 N, cat. No. 30417 (Riedel-de Haën, Germany)
- toluene Pestanal, cat. No. 34494 (Riedel-de Haën, Germany)
- AE F075736, analytical standard (AgrEvo GmbH, Germany)
- AE F115008, analytical standard (AgrEvo GmbH, Germany)
- C18 – cartridge, 500 mg, cat. No. 730013 (Chromabond)
- Glass microfibre filter, cat. No. 1827070 (Whatman)
- Cellulose nitrate filter (0.45 µm), cat. No. 11306-50-N (Satorius)
- NH<sub>2</sub>/C18 – cartridge, 500mg NH<sub>2</sub>, 500mg C18, cat. No. 730618 (Chromabond)
- Silicagel-cartridge, 500 mg, ISOLUTE, cat. No. 460-0050-H (ICT)

Stock solutions of the analytical standards were prepared by dissolving about 50 mg of analytical standard of AE F075736 and 50 mg of the analytical standard of AE F115008 in ca. 50 mL acetonitrile / triethylamine (0.02 mol/L), 4:1, v/v. Concentration of the stock solutions was 1.0 mg/mL. Working solutions were prepared from the stock solution by further dilution with acetonitrile / water, 1:1, v/v.

### **5.3 Apparatus**

The following list contains the apparatus used in the laboratory of the author for validation. Suitable alternatives can be taken.

- standard laboratory glassware
- rotary vacuum evaporator with water bath
- HPLC system with UV-detector
- chromatography column, Prodigy ODS, 150 mm x 4.6 mm, 5  $\mu$ m
- chromatography column, Nucleosil C18, 5  $\mu$ m, 250 mm x 4 mm (confirmation method)

### **5.4 Preparation of samples and storage**

The samples of drinking water (Vittel) were bought November 1999.

The samples of surface water were taken from the small lake at building F821 (Industriepark Höchst) on 14 Jan 2000.

Samples were stored at room temperature.

### **5.5 Laboratory steps**

#### **5.5.1 Metsulfuron-methyl in drinking water**

##### **5.5.1.1 Extraction and C18-cartridge clean up**

1000 mL of the water sample is adjust to pH 2.5 with phosphoric acid (2 N) and sucked through a Chromabond 500 mg C18-cartridge (conditioned with 5 mL methanol and 5 mL water) with a flow rate of ca. 10 – 20 mL/min. Wash used glassware with 200 mL Millipore water and suck the washing water through the cartridge. Suck the C18-cartridge to dryness within ca. 5 min. Eluate AE F075736 with 5 mL methanol into a test tube. Reduce the eluate to dryness using a vacuum rotary evaporator (bath temperature ca. 50 °C).

##### **5.5.1.2 Preparation of the final solution**

Dissolve the residue in 1.0 mL acetonitrile/water (1/1, v/v).

### 5.5.1.3 Determination of residues

The following conditions have been used successfully during validation of this analytical method. If different equipment and columns are used, modifications of the given conditions may be necessary.

#### HPLC-conditions

Instrument:	Beckmann
System:	IBM-PC System 2 8570 Model 70386
Pump:	226 Beckmann
Detector:	Diode Array Detector 168 Beckmann
Injector:	Autosampler 507 Beckmann
Injection volume:	100 µL
Column temperature:	30 °C
Column:	Prodigy ODS, 5 µm, 150 mm x 4,6 mm
Wavelength:	233 nm
Flow rate:	1.0 mL/min
Mobile phase:	
Eluent A	Acetonitrile Chromasolv
Eluent B	Phosphoric acid $\text{C}_3\text{H}_3\text{PO}_4 = 0.01\text{mol/L}$

#### Gradient program for the determination of AE F075736

Time [min]	Total flow pump A + B [mL/min]	Pump A (eluent A) Acetonitrile Chromasolv [%]	Pump B (eluent B) phosphoric acid $\text{C}_3\text{H}_3\text{PO}_4 = 0.01\text{mol/L}$ [%]
0	1.0	20	80
10	1.0	50	50
20	1.0	50	50
30	1.0	80	20
35	1.0	80	20
45	1.0	20	80
47	1.0	20	80
55	1.0		

Under these conditions the retention time for AE F075736 is about 21.0 min.

The chromatography data were recorded and evaluated with TURBOCHROM® Client/Server system, PERKIN ELMER.

### 5.5.2 Iodosulfuron-methyl-sodium and metsulfuron-methyl in surface water

#### 5.5.2.1 Extraction and NH<sub>2</sub>/C18-cartridge clean up

1000 mL of the water sample is adjusted to pH 2.5 with phosphoric acid (2 N) and filtered through a glass microfibre filter and a cellulose nitrate filter (0.45 µm). The sample is sucked through a Chromabond 500 mg NH<sub>2</sub> / 500 mg C18-cartridge (conditioned with 5 mL methanol and 5 mL water) with a flow rate of ca. 10 – 20 mL/min. Wash used glassware with 200 mL Millipore water and suck the washing water through the cartridge. Suck the NH<sub>2</sub> / C18-cartridge to dryness within ca. 5 min. and wash the NH<sub>2</sub> / C18-cartridge with 10 mL methanol/water (30:70, v/v). Eluate AE F115008 and AE F075736 with 15 mL methanol/water (60:40, v/v) into a round-bottom flask. Reduce the eluate to dryness using a vacuum rotary evaporator (bath temperature ca. 50 °C).

#### 5.5.2.2 Silicagel-cartridge clean up

Dissolve the residue in 20 mL toluene (if necessary use an ultrasonic bath) and suck through a Silicagel-cartridge (conditioned with 5 mL toluene). Discard the eluate, suck the Silicagel-cartridge to dryness. Wash the round-bottom flask with 30 mL toluene/methanol (95:5, v/v), if necessary use an ultrasonic bath, and elute AE F115008 and AE F075736 with this solution. Reduce the eluate to dryness using a vacuum rotary evaporator (bath temperature ca. 40 °C).

#### 5.5.2.3 Preparation of the final solution

Dissolve the residue in 1.0 mL acetonitrile/water (1/1, v/v).

#### 5.5.2.4 Determination of residues

The following conditions have been used successfully during validation of this analytical method. If different equipment and columns are used, modifications of the given conditions may be necessary.

#### HPLC-conditions

Instrument:	Beckmann
System	IBM-PC System 2 8570 Model 70386
Pump:	226 Beckmann

Column	Nucleosil C18, 5 µm, 250 mm x 4 mm (confirmation method)
Wavelength:	233 nm
Flow rate:	1.0 mL/min
Mobile phase:	
Eluent A	Acetonitrile Chromasolv
Eluent B	Phosphoric acid C <sub>H3</sub> PO <sub>4</sub> = 0.01 mol/L

**Gradient program for the determination of AE F075736**

Time [min]	Total flow pump A + B [mL/min]	Pump A (eluent A)		Pump B (eluent B)	
		Acetonitrile	Chromasolv	phosphoric acid $\text{C}_3\text{H}_3\text{PO}_4$	0.01mol/L
		[%]		[%]	
0	1.0	20		80	
10	1.0	50		50	
20	1.0	50		50	
30	1.0	80		20	
35	1.0	80		20	
45	1.0	20		80	
47	1.0	20		80	
55	1.0				

Under these conditions the retention time for AE F075736 is about 21.0 min and for AE F115008 about 25.4 min.

The chromatography data were recorded and evaluated with TURBOCHROM® Client/Server system, PERKIN ELMER.

**Confirmatory method**

For confirmatory purposes a different stationary phase was used:

HPLC-Column: Nucleosil C18, 5  $\mu\text{m}$ , 250 mm x 4 mm

Under these conditions the retention time for AE F075736 is about 21.5 min and for AE F115008 about 25.5 min.

**5.6 Calibration**

The concentration of AE F075736 and AE F115008 were calculated using external standards at 4 different concentrations over a range from 0.1 ng/ $\mu\text{L}$  up to 1 or 2 ng/ $\mu\text{L}$ . The lowest concentration was 0.1 ng/ $\mu\text{L}$ . The highest concentration was 2 ng/ $\mu\text{L}$ .

The recommended order of samples / test solutions for setting up a sequence for HPLC-determination is 'test solution - sample - test solution - sample'. If different equipment is used and /or more or less samples are worked up, modifications of this order may be necessary.

## 5.7 Calculations

### Determination of concentration of the analytical target in the final solution

The concentrations of the analytes in control samples, fortified samples and treated samples were calculated using external standard procedures with multi level or single level calibration.

#### Single level calibration (one point calibration):

$$C_S = \frac{P_S}{P_R} \cdot C_R \cdot \frac{I_R}{T_4} \quad \left[ \text{pg}/\mu\text{L} = \frac{\text{counts}}{\text{counts}} \cdot \text{pg}/\mu\text{L} \cdot \frac{\mu\text{L}}{\mu\text{L}} \right] \quad (1)$$

$C_S$	Concentration in final sample solution $V_{end}$ (identical with conc. in $T_4$ ) (treated, untreated and recovery)	[pg/ $\mu$ L] = [ng/mL]
$C_R$	Concentration in reference solution	[pg/ $\mu$ L] = [ng/mL]
$P_S$	Peak area or peak height of the sample solution	[counts]
$P_R$	Peak area or peak height of the reference solution	[counts]
$T_4$	Injection volume of the sample solution	[ $\mu$ L]
$I_R$	Injection volume of the reference solutions	[ $\mu$ L]

#### Multi level calibration (calibration curve):

For the calibration peak areas (heights) of the standards were plotted versus the corresponding concentrations. An optimized calibration curve of the following form

$$f(C_S) = P = a + bC_S + cC_S^2 \quad (2)$$

is calculated, where  $f(C_S)$  is the peak area (height),  $C_S$  the concentration of the analyte in the final sample extract and  $a$ ,  $b$ ,  $c$  are constants.

### Determination of residues

Calculation of residues was carried out by a data handling software according to the following procedure

$$Res = \frac{C_s \cdot V_{end} \cdot f}{W} \quad \left[ \mu\text{g/L} = \frac{(\text{ng/mL}) \cdot \text{mL} \cdot 1}{\text{mL}} \right] \quad (3)$$

$$f = \frac{V_1 \cdot V_2 \cdot V_n}{T_1 \cdot T_2 \cdot T_n} \quad \left[ 1 = \frac{\text{mL} \cdot \text{mL} \cdot \text{mL}}{\text{mL} \cdot \text{mL} \cdot \text{mL}} \right] \quad (4)$$

<b>Res</b>	Residue	[μg/L]
<b>C<sub>s</sub></b>	Concentration in final sample solution <i>V<sub>end</sub></i> (treated, untreated and recovery)	[ng/mL]
<b>W</b>	Sample weight	[mL]
<b>f</b>	Dilution factor	without dimension
<b>V<sub>1</sub></b>	Volume for primary extraction	[mL]
<b>V<sub>2</sub></b>	Volume after making up of aliquot <i>T<sub>1</sub></i>	[mL]
<b>V<sub>n</sub></b>	Volume after making up of aliquot <i>T<sub>n-1</sub></i> ( <i>n</i> = 3, 4 and so on)	[mL]
<b>V<sub>end</sub></b>	Final sample solution (identical with <i>V<sub>2</sub></i> or <i>V<sub>3</sub></i> or <i>V<sub>n</sub></i> depending on the method)	[mL]
<b>T<sub>1</sub></b>	Aliquot of <i>V<sub>1</sub></i>	[mL]
<b>T<sub>2</sub></b>	Aliquot of <i>V<sub>2</sub></i>	[mL]
<b>T<sub>n</sub></b>	Aliquot of <i>V<sub>n</sub></i> ( <i>n</i> = 3, 4 and so on)	[mL]

### Determination of recovery rates

Calculation of recovery rates were carried out by a data handling software according to the following procedure

$$Res_d = Res_{(Rec)} - Res_{(Unt)} \quad \left[ \frac{\mu\text{g}}{\text{L}} = \frac{\mu\text{g}}{\text{L}} - \frac{\mu\text{g}}{\text{L}} \right] \quad (5)$$

$$Rec = \frac{Res_d}{Res_f} \cdot 100 \quad \left[ \% = \frac{\mu\text{g/L}}{\mu\text{g/L}} \cdot \% \right] \quad (6)$$

<b>Res<sub>(Rec)</sub></b>	Residue in the sample solution of the recovery test calculated with equation (3) and (4)	[μg/L]
<b>Res<sub>(Unt)</sub></b>	Residue in the sample solution of the corresponding untreated control sample calculated with equation (3) and (4)	[μg/L]
<b>Rec</b>	Recovery rate	[%]
<b>Res<sub>f</sub></b>	Concentration spiked for fortification	[μg/L]
<b>Res<sub>d</sub></b>	Concentration detected by analytical method	[μg/L]

## 6 Results

Calculation sheets and calibration curves for all laboratory analyses are given in Annex II and III with examples of chromatograms given in Annex VI.

### 6.1 Recoveries

Recovery experiments for method validation were conducted at 0.1 and 1.0 µg/L. At each level for drinking water or surface water a min. of 5 recovery values were determined. Recoveries are calculated with calibration curve according to the procedure described in section 5.8 with correction for any apparent residues.

The mean recoveries for AE F075736 in **drinking water** were found at 79 and 92 %, with an RSD of up to 9 %.

In **surface water** the mean recoveries for AE F075736 were found at 85 and 105 %, with an RSD of up to 10 %, the confirmation method gave mean recovery values of 92 and 106 %, with an RSD of up to 18 %.

In **surface water** the mean recoveries for AE F115008 were found at 92 and 103 %, with an RSD of up to 9 %, the confirmation method gave mean recovery values of 85 and 96 %, with an RSD of up to 20 %.

A summary of all recoveries for AE F075736 and AE F115008 are given in the following tables.

**Summary table of recoveries:**
**Analyte: AE F075736**

Matrix	Fortification level [µg/L]	Recovery [%]	Mean recovery [%]	RSD (a) [%]	n
Drinking water (Vittel)	0.10	82	79	9	5
		75			
		87			
		83			
		70			
	1.0	96	92	4	5
		91			
		87			
		93			
		93			
Surface water	0.10	90	85	10	5
		78			
		91			
		92			
		74			
	1.0	98	105	5	5
		102			
		105			
		109			
		109			
Surface water Confirmation method	0.10	74	92	18	7
		110			
		92			
		106			
		108			
		90			
		67			
	35 (b)				
	1.0	102	106	3	5
		106			
106					

The calculation was done with calibration function of peak areas.

a)  $RSD = S.D. / \text{Mean Recovery} \cdot 100 \%$

$$S.D. = \left[ \frac{\sum (R_i - R_m)^2}{n - 1} \right]^{1/2}$$

R<sub>i</sub>: recovery  
 R<sub>m</sub>: mean recovery  
 n: number of recoveries

- b) Outliner Injection problems, HPLC system used to much solution for washing, so the injection volume was too small

**Summary table of recoveries:**
**Analyte: AE F115008**

Matrix	Fortification level [µg/L]	Recovery [%]	Mean recovery [%]	RSD (a) [%]	n
Surface water	0.10	108 92 94 106 113	103	9	5
	1.0	89 90 90 94 95	92	3	5
Surface water Confirmation method	0.10	75 78 74 114 138 (b) 98 73 36 (c)	85	20	6
	1.0	92 97 97 97 98	96	2	5

The calculation was done with calibration function of peak areas.

a) 
$$RSD = \frac{S.D.}{\text{Mean Recovery}} \cdot 100 \%$$

$$S.D. = \left[ \frac{\sum (R_i - R_m)^2}{n - 1} \right]^{1/2}$$

R<sub>i</sub>: recovery  
 R<sub>m</sub>: mean recovery  
 n: number of recoveries

- b) Outliner Unexpected high value (results including this value: mean recovery = 93 %, RSD = 27 %, n = 7)  
 c) Outliner Injection problems, HPLC system used to much solution for washing, so the injection volume was too small

**6.2 Limit of quantification (LOQ)**
**Drinking water:**

The lowest level at which metsulfuron-methyl has been quantified in this study is 0.1 µg/L. This level is therefore considered to be an appropriate limit of quantification for AE F075736 in drinking water.

The LOQ (0.1 µg/L) for AE F115008 in drinking water is given in the analytical method EM F 01/98 – 0 (ref. 1).

**Surface water**

The lowest level at which iodosulfuron-methyl-sodium and metsulfuron-methyl have been quantified in this study is 0.1 µg/L. This level is therefore considered to be an appropriate limit of quantification for AE F115008 and AE F075736 in surface water.

### 6.3 Blank values

#### Drinking water:

Analysis of control samples has shown that apparent residues of AE F075736 observed were n.d. (not detectable,  $< 0.3 \times \text{LOQ}$ ). This demonstrates that  $0.1 \mu\text{g/L}$  is a feasible level for recognition of residues with reasonable certainty.

#### Surface water:

Analysis of control samples has shown that apparent residues of AE F115008 and AE F075736 observed were n.d. (not detectable,  $< 0.3 \times \text{LOQ}$ ). This demonstrates that  $0.1 \mu\text{g/L}$  is a feasible level for recognition of residues with reasonable certainty.

### 6.4 Critical steps of the method

There are no critical steps of the method.

### 6.5 Time for analysis

From extraction of the samples to preparation of the final solutions for HPLC/UV determination, it is normally possible to analyse a batch of 14 samples in three day.

**Annex I: Analytical method flow sheet****Metsulfuron-methyl in drinking water**

*Extraction AE F075736 and  
C18-cartridge clean-up*

1000 mL water  
is adjust to pH 2.5 with phosphoric acid (2 N)  
and sucked through an Chromabond 500 mg C18-cartridge  
(conditioned with 5 mL methanol and 5 mL water)  
with a flow rate of ca. 10 – 20 mL/min

Wash used glassware with 200 mL Millipore water  
and suck the washing water through the cartridge.

Suck the C18-cartridge to dryness within ca. 5 min.

Eluate AE F075736 with 5 mL methanol  
into a test tube

Reduce the eluate to dryness using a vacuum rotary evaporator  
(bath temperature ca. 50 °C).

HPLC

dissolve the residue in 1.0 mL water/acetonitrile (1/1, v/v) for quantification  
with UV/HPLC

**Iodosulfuron-methyl-sodium and metsulfuron-methyl in surface water**

*Extraction  
AE F115008 and  
AE F075736 and  
NH2 / C18-cartridge  
clean-up*

1000 mL water  
is adjust to pH 2.5 with phosphoric acid (2 N),  
filtered through a glass microfibre filter and a cellulose nitrate filter (0.45 µm)  
the sample is sucked through a Chromabond 500 mg NH<sub>2</sub> / 500 mg C18-cartridge  
(conditioned with 5 mL methanol and 5 mL water)  
with a flow rate of ca. 10 – 20 mL/min

Wash used glassware with 200 mL Millipore water  
and suck the washing water through the cartridge.

Suck the NH<sub>2</sub> / C18-cartridge to dryness within ca. 5 min.

Wash the NH<sub>2</sub> / C18-cartridge with 10 mL methanol/water (30:70, v/v).

Eluate AE F115008 and AE F075736 with 15 mL methanol/water (60:40, v/v)

Reduce the eluate to dryness using a vacuum rotary evaporator  
(bath temperature ca. 50 °C).

*Silicagel-cartridge  
clean-up*

Dissolve the residue in 20 mL toluene (if necessary use an ultrasonic bath)  
suck through a Silicagel-cartridge (conditioned with 5 mL toluene)

Discard the eluate, suck the Silicagel-cartridge to dryness

Wash the round-bottom flask with 30 mL toluene/methanol (95:5, v/v)  
and elute AE F115008 and AE F075736 with this solution  
Reduce the eluate to dryness using a vacuum rotary evaporator  
(bath temperature ca. 40 °C).

*HPLC*

dissolve the residue in 1.0 mL water/acetonitile (1/1, v/v) for quantification with  
UV/HPLC

The calculation was done with calibration function of peak areas.

a) RSD = S.D. / Mean Recovery • 100 %

$$S.D. = \left[ \frac{\sum (R_i - R_m)^2}{n - 1} \right]^{1/2}$$

R<sub>i</sub>: recovery  
R<sub>m</sub>: mean recovery  
n: number of recoveries

b) Outliner Injection problems, HPLC system used to much solution for washing, so the injection volume was too small

**Annex VI: Typical chromatograms**

The following chromatograms are given as examples of characteristic recorder plots.

The retention time of the target signal varied to a certain extent as the chromatographic system had to be fitted to the particular situation.

The computer plot offers the possibility of presenting only the important cut of the chromatogram with additional stretching of time or height. The electronic plots show the peak height in counts plotted vs. the retention time in minutes.

## GLP-Bescheinigung

### Bescheinigung

Hiermit wird bestätigt, daß die Prüfeinrichtung  
Rückstände und Verbrauchersicherheit  
in 65929 Frankfurt am Main

Brüningstraße 50

(Ort, Anschrift)

der Hoechst Schering AgrEvo GmbH, Werk Höchst

(Firma)

am 06.06.1997 und 10.09.1997

(Datum)

von der für die Überwachung zuständigen Behörden über  
die Einhaltung der Grundsätze der Guten Laborpraxis  
inspiziert worden ist.

Es wird hiermit bestätigt, daß folgende Prüfungen in  
dieser Prüfeinrichtung nach den Grundsätzen der Guten  
Laborpraxis durchgeführt werden:

Prüfungen zur Bestimmung von Rückständen

### Certificate

It is hereby certified that the test facility  
Rückstände und Verbrauchersicherheit  
in Frankfurt am Main

Brüningstraße 50

(location, address)

of Hoechst Schering AgrEvo GmbH, Werk Höchst

(company name)

on 06.06.1997 und 10.09.1997

(date)

was inspected by the competent authority  
regarding compliance with the Principles of  
Good Laboratory Practice.

It is hereby certified that studies in this  
test facility are conducted in compliance with  
the Principles of Good Laboratory Practice:

Residues

Im Auftrag

*Dr. Hecker*

(Dr. Hecker) Wiesbaden, den 11. Februar 1998
