1998 National PM 2.5 Emissions 2 million tons

(excludes fugitive dust/ agricultural/ forestry emissions and natural sources)

Trends in PM Emissions from Nonroad Engines, 1970 - 1998

Trends in PM Emissions from Nonroad Engine Sources 1970-98 (tons)

1998 National NOx Emissions 24.4 million tons

Growth in NOx Emissions from Nonroad Engines, 1970 - 1998

Growth in NOx Emissions from Nonroad Engine Sources, 1970-98 (tons)

NO_x Health & Environmental Impacts

- NOx is a key ingredient in smog formation
- Transforms into harmful fine particles breathed deep into the lungs
- Acid deposition
- Haze in urban areas and national parks
- Eutrophication of coastal estuaries
