January 15, 2015

I, (b) (6), my husband (b) (6) and our two businesses (b) (6) and (b) (6) ask for a safer alternative than open burning, especially of hazardous waste - anywhere! Camp Minden is a case in point.

C'mon now! The toxic emissions in addition to the particulates found in 'regular' smoke are hazardous to the health of not just humans, but other innocent flora and fauna victims.

Just stop it until you figure out a safer disposal method for disposing of hazardous waste.

Thank you for your consideration.

Sincerely,

(b) (6)

Kirkland WA 98033
