Superfund Primer

- **What is Superfund?**
  - Law enacted by Congress as the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA).
  - Formed in response to large toxic sites discovered in the 1970s such as Love Canal and Valley of the Drums.
- **What is the National Priorities List (NPL)?**
  - EPA's list of all federal Superfund sites
  - 1,270 national Superfund sites
  - 118 located in New England
  - 31 located in Massachusetts
  - 3 located in the Mystic River Watershed

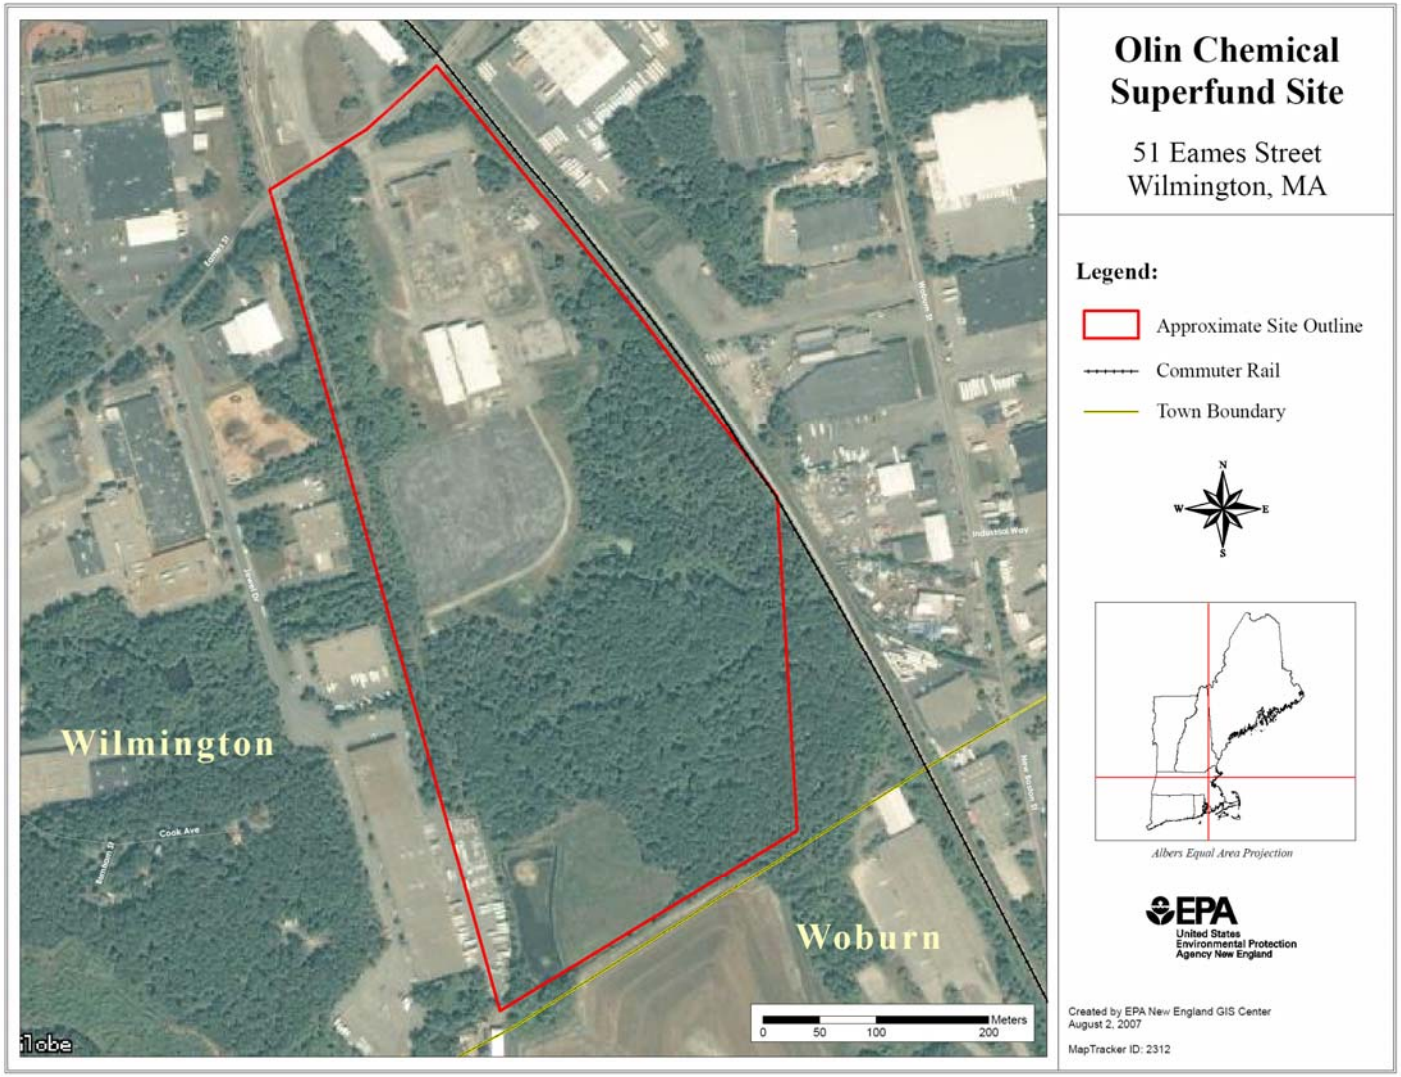
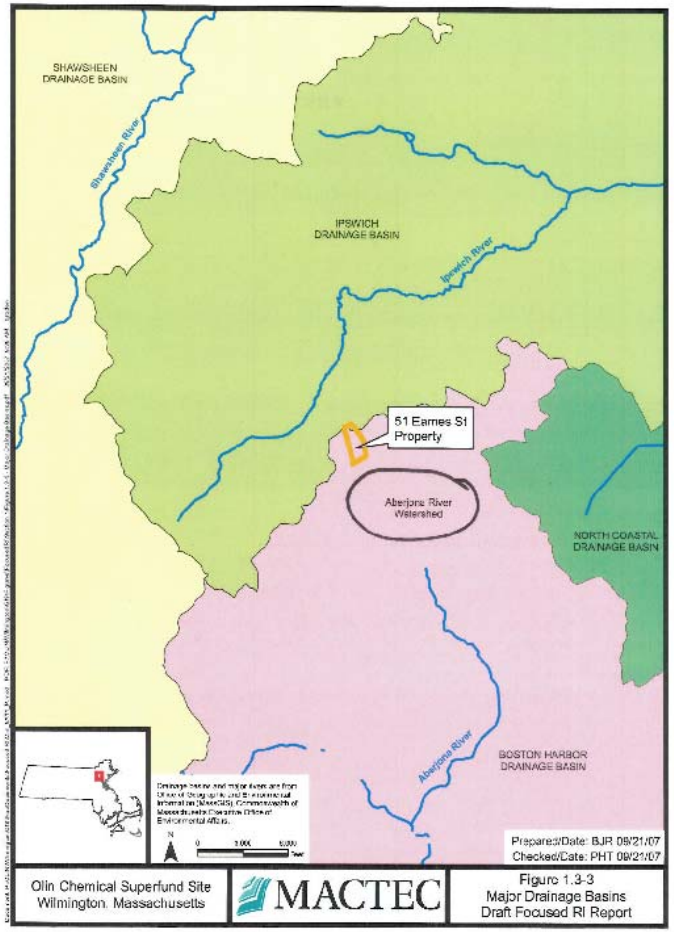
Olin Chemical Superfund Site



Brief Overview/History of Olin

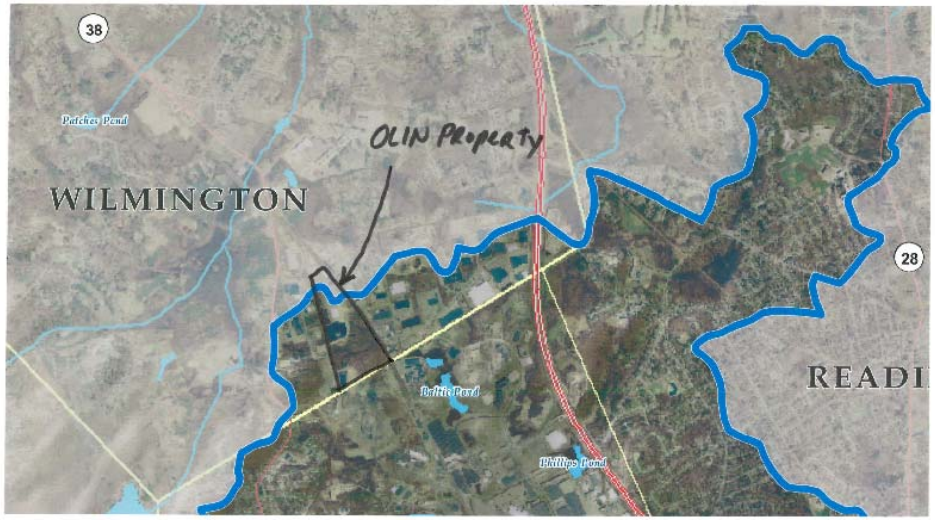
- 53-acre property on the Wilmington/Woburn border.
- Operated from 1953 to 1986. Manufactured specialty chemicals for the rubber/plastics industry.
- Liquid wastes were discharged to unlined pits and lagoons, which were hydraulically connected to the East Ditch.
- One of EPA Region 1’s newest Superfund Sites listed in April 2006.

Olin Drainage Basins

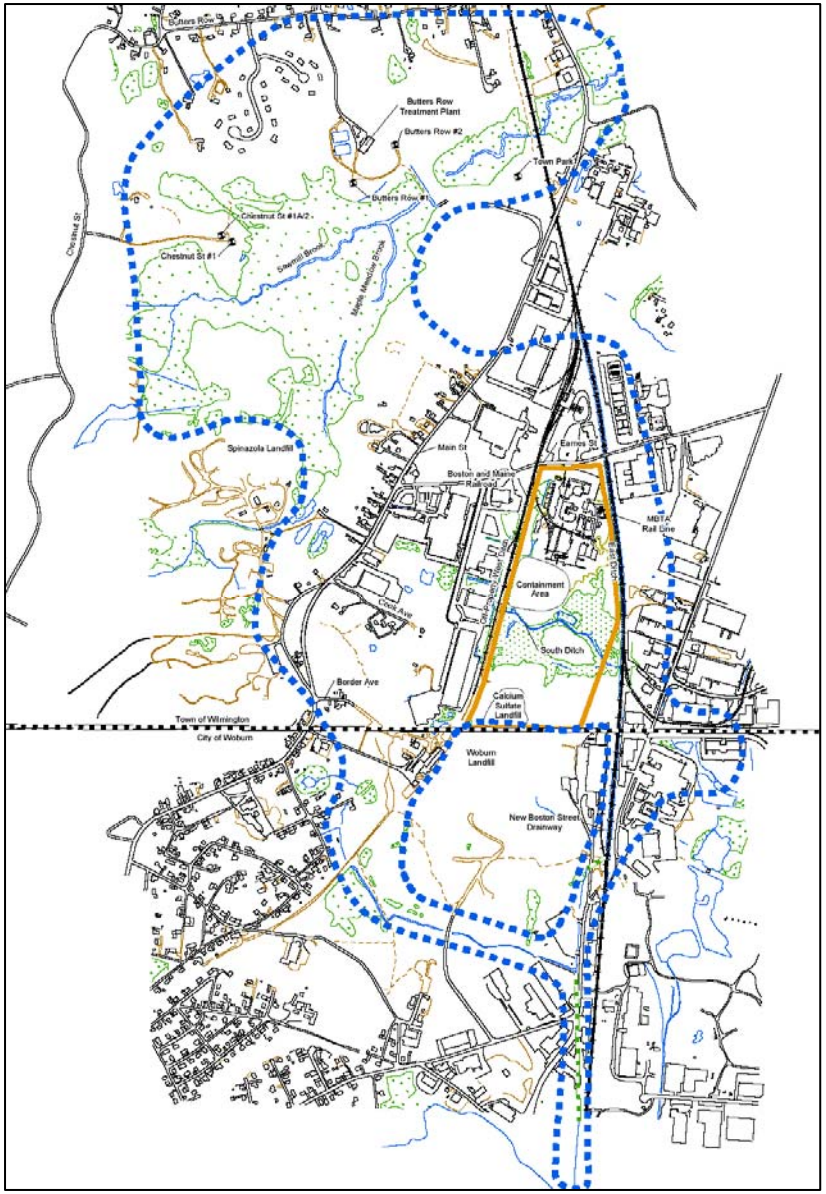


A groundwater flow divide exists on the Olin property which splits flow between the Ipswich River and Mystic/Aberjona River watersheds.

Impacts to both watersheds.



Olin Site Current Study Area



Potential Mystic River WS Impacts

Contaminants identified to date with the most frequency by media include;

- Soil: chromium, trimethylpentenes, Opex, Kempore, BEHP, NDPA, calcium, sulfate, sodium and ammonia
- Sediment: chromium and BEHP
- Surface Water: chromium, aluminum, sulfate, ammonia and NDMA
- Groundwater: chromium, aluminum, sulfate, trimethylpentenes, BEHP, NDPA and NDMA

Groundwater Samples

- Private wells
- Gaps – Plume edges and analytical
- 207 existing monitoring wells
- 15 – 20 new wells to be installed
- Two sampling events planned
- 189 samples in the 1st event
- Up to 242 analysis/sample
