Greenhouse Gas Reporting Rule

Subpart A: General Provisions

Subpart C: General Stationary Fuel

Combustion Sources

Subpart D: Electricity Generation

Agenda

- Background
- Rule Applicability
- Reporting, Monitoring, and Recordkeeping
- e-GGRT Registration
- Data Publication
- Subpart C, Stationary Fuel Combustion Sources
- Subpart D, Electricity Generation
- For more information
- Q&A

Disclaimer

This training is provided solely for informational purposes. It does not provide legal advice, have legally binding effect, or expressly or implicitly create, expand, or limit any legal rights, obligations, responsibilities, expectations, or benefits in regard to any person.

Overview: U.S. EPA GHG Reporting Program (GHGRP)

Goal of GHGRP is to collect accurate and timely data on GHG information to inform future policy decisions.

- Monitoring began in 2010 for most emission sources with first reports due by September 30, 2011.
- An additional 12 source categories began collecting data in 2011 and report by September 28, 2012.
- Rule covers 41 source categories for reporting, accounting for 85-90% of U.S. GHG emissions.
- Reporting only, no control or use requirements.

Source Categories for 2010

- Adipic Acid Production (Subpart E)
- Aluminum Production (Subpart F)
- Ammonia Manufacturing (Subpart G)
- Cement Production (Subpart H)
- Electricity Generation (Subpart D)
- Ferroalloy Production (Subpart K)
- General Stationary Fuel Combustion Sources (Subpart C)
- Glass Production (Subpart N)
- HCFC-22 Production HFC-23 Destruction (Subpart O)
- Hydrogen Production (Subpart P)
- Iron and Steel Production (Subpart Q)
- Lead Production (Subpart R)
- Lime Manufacturing (Subpart S)
- Manure Management Systems (Subpart JJ) [EPA will not be implementing subpart JJ due to a Congressional restriction prohibiting the expenditure of funds for this purpose.]
- Municipal Solid Waste Landfills (Subpart HH)

- Miscellaneous Uses of Carbonates (Subpart U)
- Nitric Acid Production (Subpart V)
- Petrochemical Production (Subpart X)
- Petroleum Refineries (Subpart Y)
- Phosphoric Acid Production (Subpart Z)
- Pulp and Paper Manufacturing (Subpart AA)
- Silicon Carbide Production (Subpart BB)
- Soda Ash Production (Subpart CC)
- Suppliers of Coal-based Liquid Fuels (Subpart LL)
- Suppliers of Petroleum Products (Subpart MM)
- Suppliers of Natural Gas and Natural Gas Liquids (Subpart NN)
- Suppliers of Industrial Greenhouse Gases (Subpart OO)
- Suppliers of Carbon Dioxide (Subpart PP)
- Titanium Dioxide Production (Subpart EE)
- Zinc Production (Subpart GG)

New Source Categories for 2011

The twelve new source categories for reporting year 2011 and beyond include:

- Electronics Manufacturing (Subpart I)
- Fluorinated Gas Production (Subpart L)
- Magnesium Production (Subpart T)
- Petroleum and Natural Gas Systems (Subpart W)
- Use of Electric Transmission and Distribution Equipment (Subpart DD)
- Underground Coal Mines (Subpart FF)
- Industrial Wastewater Treatment (Subpart II)
- Imports and Exports of Equipment Pre—charged with Fluorinated GHGs or Containing Fluorinated GHGs in Closed—cell Foams (Subpart QQ)
- Carbon dioxide injection and geologic sequestration (Subpart RR)
- Manufacture of electric transmission and distribution (Subpart SS)
- Industrial waste landfills (Subpart TT)
- Injection of carbon dioxide (Subpart UU)

Full Version of 40 CFR Part 98

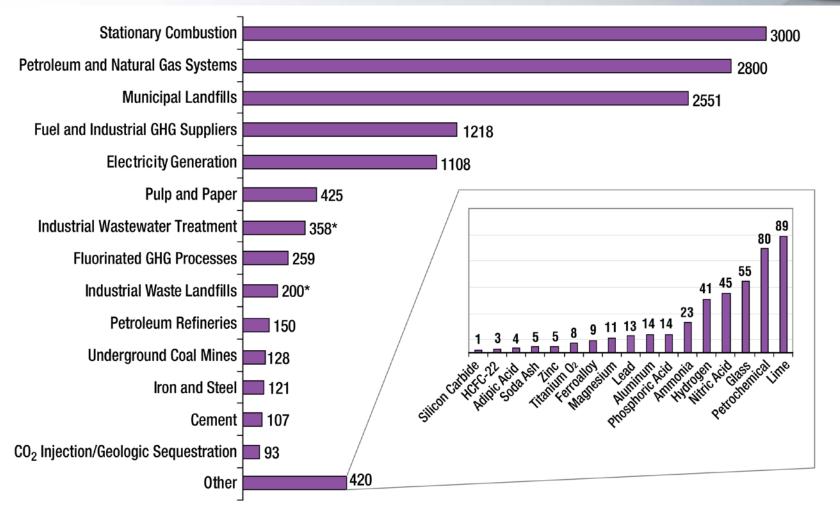

Available in the electronic Code of Federal Regulations (eCFR) at:

http://ecfr.gpoaccess.gov/cgi/t/text/textidx?c=ecfr&sid=6c812965b3fe4dfd2d7ef9e8cd1d4c2f&tpl=/ecf rbrowse/Title40/40cfr98_main_02.tpl

This version of the regulation contains all published rule updates.

More Than 10,000 U.S. Facilities Covered

Key Elements of the Rule

- Annual reporting of GHG by:
 - 41 source categories, which includes:
 - 33 types of direct emitters
 - 6 types of suppliers of fuel and industrial GHG
 - Facilities that inject CO₂ underground for geologic sequestration, enhanced oil recovery, or any other purpose.
- 25,000 metric tons CO₂e or more per year reporting threshold for most sources; capacity-based thresholds where feasible
- Direct reporting to EPA electronically
- EPA verification of emissions data

What GHGs Are Reported?

- \bullet CO₂
- CH₄ (methane)
- N₂O (nitrous oxide)
- Fluorinated GHGs
 - HFCs (hydrofluorocarbons)
 - PFCs (perfluorocarbons)
 - − NF₃ (nitrogen trifluoride)
 - SF₆ (sulfur hexafluoride)
 - Other fluorinated gases (except CFC and HCFC and gases <1 mm Hg @25°C)

What Is CO₂e?

- GHGs have varying heat-trapping ability and atmospheric lifetimes.
- Global warming potential (GWP) is a metric used to compare emissions among GHGs.
- The GWP of CO₂ is 1.0, and the GWP of other GHGs are expressed relative to CO₂
 - For example, CH_4 has a GWP of 21. Each metric ton of CH_4 emissions would have 21 times as much impact on global warming (over a 100-year time horizon) as a metric ton of CO_2 emissions.
- Mass emissions $x GWP = CO_2e$ (metric tons)

Table A-1 of Subpart A lists GWPs*

^{*}Fluorinated Greenhouse Gases source categories can use a default GWP of 2,000 for GWPs not listed in Table A–1.

Part 2. Applicability

Applicability for Direct Emitters Is Facility-Based

In most cases, a facility* is defined as...

- Physical property, plant, building, structure, source, or stationary equipment;
- on contiguous or adjacent properties;
- in actual physical contact or separated solely by public roadway or other public right of way; and
- under common ownership or common control

*Military installations may be classified as more than one facility.

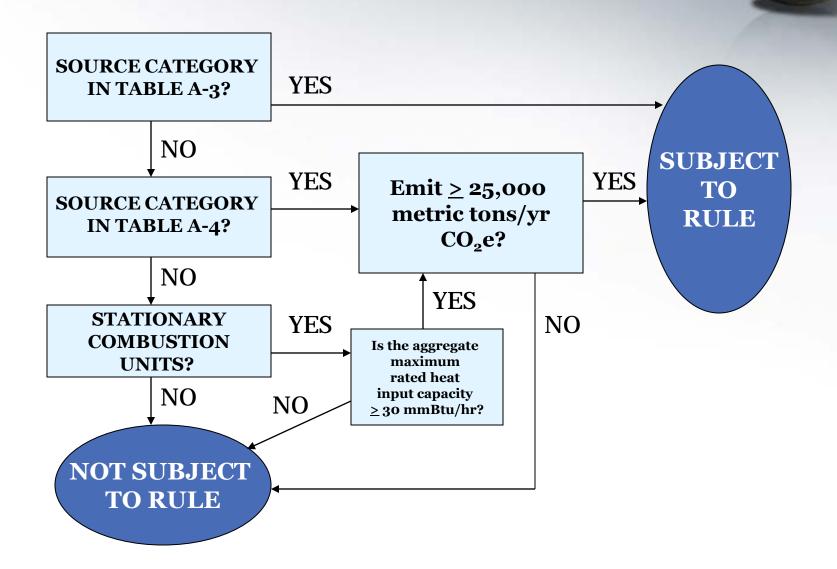

A different definition of "facility" applies to the Electric Transmission and Distribution Equipment source category (subpart DD) and some Petroleum and Natural Gas Systems (subpart W).

Assessing Applicability to the Rule

- A facility can have multiple source categories.
- You must evaluate each source category separately to assess applicability to the rule.
- If rule applies, report emissions for all source categories at your facility for which methods are provided in the rule.

Does the Rule Apply to My Facility?

Does the Rule Apply to My Facility?

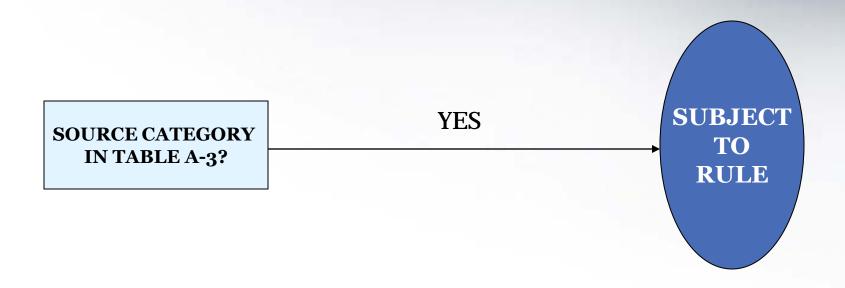

Table A-3: All-in Source Categories

Applies in 2010

Electricity Generation if report CO₂ year-round through Part 75

Adipic Acid Production

Aluminum Production

Ammonia Manufacturing

Cement Production

HCFC-22 Production/

HFC-23 Destruction Processes

Lime Manufacturing

Nitric Acid Production

Petrochemical Production

Petroleum Refineries

Phosphoric Acid Production

Manure Management Systems*

Silicon Carbide Production

Soda Ash Production

Titanium Dioxide Production

Municipal Solid Waste Landfills that generate $CH4 \ge 25,000$ metric tons CO_2 e per year

Applies in 2011

Carbon Dioxide Injection

Electrical Equipment Use

Electrical Equipment Manufacturing

Geologic Sequestration

Underground Coal Mines that liberate 36.5 million actual cubic feet CH4 per year

^{*}The rule for manure management systems will not be implemented due to a Congressional restriction prohibiting the expenditure of funds for this purpose.

Does the Rule Apply to My Facility?

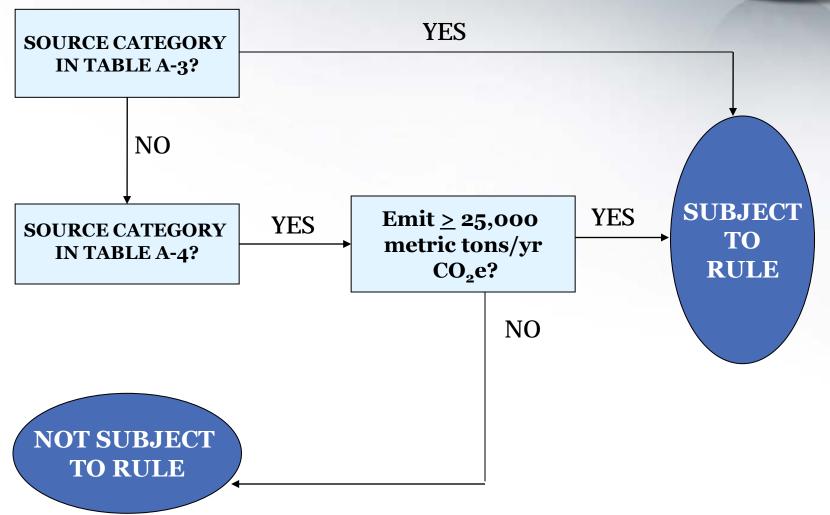

Table A-4: Threshold Source Categories*

Applies in 2010

Ferroalloy Production

Glass Production

Hydrogen Production

Iron and Steel Production

Lead Production

Pulp and Paper Manufacturing

Zinc Production

Applies in 2011

Electronics Production

Fluorinated GHG Production

Industrial Wastewater

Treatment

Industrial Waste Landfills

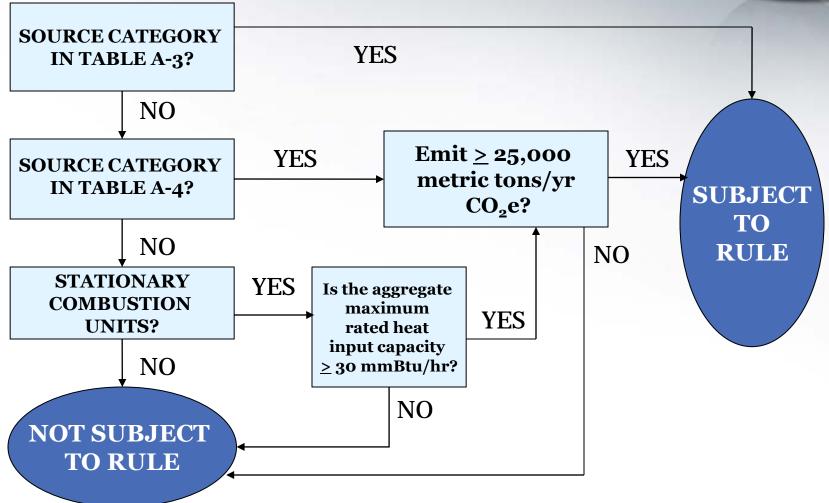

Magnesium Production

Petroleum and Natural Gas Systems

^{* &}gt;25,000 metric tons CO_2 e per year from all source categories, combustion units, and miscellaneous use of carbonates.

Does the Rule Apply to My Facility?

What Combustion Units Will Emit 25,000 MT CO2e per Year?

Fuel	Design Capacity* (mmBtu/hr)	Annual Fuel Use
Coal	30	10,800 tons
Fuel Oil	35	2.3 million gallons
Natural Gas	50	460 million ft ³

^{*}Assuming full utilization and 8,760 hours/yr.

25,000 MT CO2e per year is equivalent to using 131 rail cars of coal

Applicability Tool

To help determine if facilities must report...

- Indicate reporting year
- Check-off list of source categories
- Combustion calculator
- Municipal landfill calculator
- Electronics Manufacturing calculator
- Petroleum and Natural Gas Production calculators

http://www.epa.gov/ghgreporting/help/tool/index.html

* Calculators provide conservatively high emission estimates

How Do I Estimate Emissions for Applicability Purposes?

- Estimate actual emissions
- Use applicable equations in the rule
- Monitoring data not required—use available company records
- Simplified methods allowed for combustion sources
- Include CO₂ transferred off-site
- Exclude CO₂ emissions from biomass combustion, but include CH4 and N2O emissions
- Exclude research and development activities, unless otherwise specified in an applicable subpart (e.g. subpart RR)
- Include an F-GHG only if listed in Table A-1 of rule

If you are close to 25,000 MT CO_2 e/yr based on available records, it may be prudent to monitor.

What Suppliers Are Covered?

- All producers of:
 - Petroleum products
 - Coal-based liquids
 - Industrial GHGs (F-GHG and N₂O)
 - $-CO_2$
- Exporters of 25,000 metric tons CO₂e per year or more
- Importers of 25,000 metric tons CO₂e per year or more
- Natural gas and natural gas liquids
 - All fractionators
 - Local gas distribution companies that deliver 460 million ft³
- Importers and exporters of fluorinated GHGs in pre-charged equipment or closed—cell foams equivalent to 25,000 metric tons CO2e per year (starting in 2011 reporting year)

Facility Description	Required to Report?	Explanation
A petrochemical plant emits 22,000 metric tons/yr CO ₂ e.	Yes	Because petrochemical manufacturing is a source category that is listed in Table A-3, the facility must submit a report regardless of the amount of GHGs emitted.

Facility Description	Required to Report?	Explanation
A university emits 24,000 metric tons/yr CO ₂ e from a cogeneration unit and 2,000 metric tons/yr CO2e from coal storage.	No	Because the rule does not prescribe a method for calculating GHG emissions from coal storage, coal storage emissions are not counted in determining applicability.

Facility Description	Required to Report?	Explanation
 A cheese manufacturing plant contains: A gas-fired boiler that emits 15,000 metric tons/yr CO₂e, A biogas-fired boiler that emits 10,000 metric tons/yr CO₂, and 200 metric tons/yr of CH4 and N2O A wastewater treatment operation that emits 9,000 metric tons/yr CO₂e. 	No	Because wastewater treatment at food processing plants is a source category listed in Table A-4, the facility must report only if emissions from wastewater treatment and stationary fuel combustion are 25,000 metric tpy CO2e or more. Because CO2 emissions from combustion of biogenic fuels is excluded from the applicability computation, nonbiogenic GHG emissions for the facility are 24,200 metric tpy CO2e, and the facility is not required to report.

For more examples:

http://www.epa.gov/ghgreporting/documents/pdf/archived/GeneralProvisions.pdf

Facility Description	Required to Report?	Explanation
An offshore petroleum and natural gas production	2010 •No for subpart W	The facility must report combustion emissions in 2011
platform has stationary combustion emissions	•Yes for subpart C	because emissions from stationary combustion are 25,000 metric
exceeding 25,000 metric tons of CO ₂ e/year	2011	tons/yr CO ₂ e or more. Emissions from both combustion and
~ ~	•Yes for subpart W	production would be reported in 2012 because the facility emits
	•Yes for subpart C	25,000 metric tons/yr $ m CO_2e$

Part 3. Reporting, Monitoring, and Recordkeeping Requirements

What Are the Reporting Requirements?

- Subpart A: General Provisions
 - Applicability provisions
 - Schedule
 - Reporting and recordkeeping requirements common to all reporters
 - Definitions
 - Report submission procedures
 - Other (e.g., calibration procedures, monitoring plan)
- Subparts C-UU: Source-Specific Requirements
 - Definition of source category
 - GHG to report
 - Calculation methods
 - Monitoring and QA/QC
 - Missing data procedures
 - Reporting and recordkeeping elements unique to each subpart

General Monitoring Approaches

- Continuous emission monitoring systems (CEMS)
 - Required if already used (e.g., NSPS, Acid Rain Program) and meet specified criteria
 - Optional for other sources
- Source category-specific GHG calculation methods
 - Monitor process parameters, fuel use
 - Calculate GHG using equations in applicable subparts
 - Example approaches (varies by source category)
 - Mass balance calculation
 - Site-specific emission factors
 - Default emission factors

- Best available monitoring methods may be used during part of the first year for some source categories:
 - Use emission estimation equations provided in the rule
 - Obtain equation inputs using best available monitoring method (e.g., current monitoring methods, engineering calculations, company data)
- Must begin following all applicable monitoring and QA/QC requirements when the BAMM period expires, unless an extension is approved by EPA

Best Available Monitoring Methods: **2010 Source Categories**

- The use of best available monitoring methods has ended for all except three 2010 source categories.
- Hydrogen Production (Subpart P), Petrochemical Production (Subpart X), Petroleum Refineries (Subpart Y) source categories can extend use if installing monitors would require a process or unit shutdown or hot tap and:
 - An initial notice of intent was submitted by January 1, 2011 (or by the end of the approved BAMM extension in 2010, whichever was earlier.)
 - A full extension request not to extend beyond December 31, 2013 is submitted by February 15, 2011, and approved by EPA.
 - June 1, 2013 for one additional extension beyond December 21, 2013. Extensions will not be approved beyond December 2015.

Best Available Monitoring Methods: 2011 Source Categories

- In general, BAMM is allowed as follows:
 - For subparts I and W, BAMM is automatically allowed for all of 2011.
 - For subparts T, II, FF and TT, approval by EPA is required to use BAMM at any time in 2011.
 - For the other new 2011 subparts, BAMM is automatically allowed for part of 2011, and approval by EPA is required to use BAMM beyond the specified dates.
 - For three new 2011 subparts only (subparts I, L, and W), the use of BAMM is allowed beyond December 31, 2011, if approved by EPA.
- For more information on this process for use of BAMM, please refer to 40 CFR 98.3(j).

Schedule for Monitoring and Reporting – Reporting Year 2010

1/1/10	Start collecting data using required methods in each subpart or best available monitoring methods
12/31/10	Complete 2010 data collection
8/1/11	Submit certificate of representation
9/30/11	Submit GHG report for reporting year* 2010
Ongoing	Submit corrected report 45 days after each discovery (unless extension is requested)
Ongoing	Submit annual reports on 3/31 each year

^{*} Reporting year is the year in which the data are collected (e.g., reporting year 2010 data are contained in the report submitted on September 30, 2011).

Schedule for Monitoring and Reporting – Reporting Year 2011

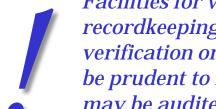

1/1/11	Start collecting data using required methods in each subpart or best available monitoring methods
12/31/11	Complete 2011 data collection
3/31/12	Submit annual GHG report (if facility has none of the new 2011 source categories*)
7/30/12	Submit certificate of representation (only if you did not submit report in 2011)
9/28/12	Submit GHG report (if facility has any of the new 2011 source categories**)
Ongoing	Submit corrected report 45 days after each discovery (unless extension is requested)
Ongoing	Submit annual reports on 3/31 each year

^{*} Subparts I, L, T, W, DD, FF, II, QQ, RR, SS, TT, and UU.

^{**} Notify EPA by March 31, 2012 if submitting your second annual report and you are reporting on 9/28/12.

What Do Facilities Report?

- Identifying information, parent companies, NAICS code(s)
- Annual GHG emissions excluding biomass CO₂, metric tons CO₂e
- Annual CO₂ emissions from biomass combustion, metric tons
- Annual emissions of each GHG for each source category, metric tons each gas
- Other emissions data required by an applicable subpart (e.g., by unit or process line)
- Verification data required by each subpart
- Data elements for which a missing data procedure was used
- Certification by the "designated representative"

Facilities for which the rule does not apply are not subject to any reporting or recordkeeping requirements. Further, facilities are not required to submit verification or notify EPA that they are not subject to the rule. However, it may be prudent to retain a record of your emission computations in the event that you may be audited.

What Do Suppliers Report?

- Identifying information, parent company, NAICS code(s)
- Annual quantity from all supply categories, metric tons CO₂e
- Annual quantity from each supply category, metric tons of each gas
- Other data required by an applicable subpart
- Verification data required by each subpart
- Description of best available monitoring methods used
- Data elements for which a missing data procedure was used
- Certification by the "designated representative"

What Is Not Reported?

- Indirect emissions (e.g., electricity use)
- Mobile source emissions* (e.g., fleet emissions, off-road equipment)
- Emission offsets

^{*} Except for portable non-self-propelled equipment on a well pad or associated with a well pad for onshore petroleum and natural gas production under subpart W.

Retain These Records for 3 Years:

- List of all units, operations, processes, and activities for which GHG emission were calculated
- All data used to calculate the GHG emissions for each unit, operation, process, and activity, categorized by fuel or material type
- The annual GHG reports
- Missing data computations
- Written GHG Monitoring Plan
- Certification and QA tests
- Maintenance records for measurement equipment
- Other data required by applicable subparts

Monitoring Plan

- Identifies responsibilities (i.e., job titles) for data collection
- Explains processes and methods used for data collection
- Describes QA/QC procedures for monitors
- May rely on references to existing corporate documents (e.g., existing QA plans, standard operating procedures)
- Monitoring Plans must be prepared by the following dates:

For 2010 Reporters: 4/1/2010

For 2011 Source Categories:

1/1/2011 for magnesium production, underground coal mines, industrial wastewater treatment, and industrial waste landfills

4/1/2011 *for all other 2011 reporters*

General Monitor Calibration Requirements [40 CFR 98.3(i)]

- Calibrate flow meters and other required measurement devices (e.g. weighing devices) by April 1, 2010 (unless previous calibration still active) or by date specified in each subpart.
 - May postpone until next maintenance outage if calibration requires a process or unit shutdown
 - For 2011 source categories, calibrate by date the measurement device must be installed, unless the subpart provides a different date
- Calibrate using manufacturer's specifications, industry consensus standard, or method in rule subpart. Describe in monitoring plan.
- Recalibrate at frequency specified in subpart. If not specified, use manufacturer's recommendations or industry consensus practice.

General Monitor Calibration Requirements [40 CFR 98.3(i)] (cont.)

- Flow meters measuring liquid or gaseous fuel feed rates, process stream flow rates, or feedstock flow rates must meet accuracy specifications in 98.3(i) if specified by the subpart
 - No more than 5% calibration error for most flow meters
 - Other values specified for orifice, nozzle, and venturi flow meters
- Calibration and accuracy requirement do not apply to:
 - Company records
 - Best available information
 - Part 75 methodologies
 - Fuel billing meters (unless company combusting fuel owns meters)
 - Flow meters used exclusively for unit startup

When Can I Stop Annual Reporting?

- Notify EPA by March 31 of the year after you meet one of the following conditions:
 - If annual reports demonstrate CO_2e <25,000 metric tons/yr for 5 consecutive years.
 - If annual reports demonstrate CO_2e <15,000 metric tons/yr for 3 consecutive years.
 - If you shut down all processes/units/supply operations covered by the rule. (Does not apply to landfills)
- You must resume reporting in future year if conditions are no longer met

How Will Emissions Be Verified?

Self certification

- Designated representative certifies report
- Rule requires one designated representative (DR) and allows one alternate designated representative (ADR) for each facility and supplier

EPA verification

- Reports submitted through an electronic system
- Built-in calculation and completeness checks for reporters
- Electronic QA and consistency checks
- EPA data review and follow-up with reporters
- On-site audits

Electronic Reporting System

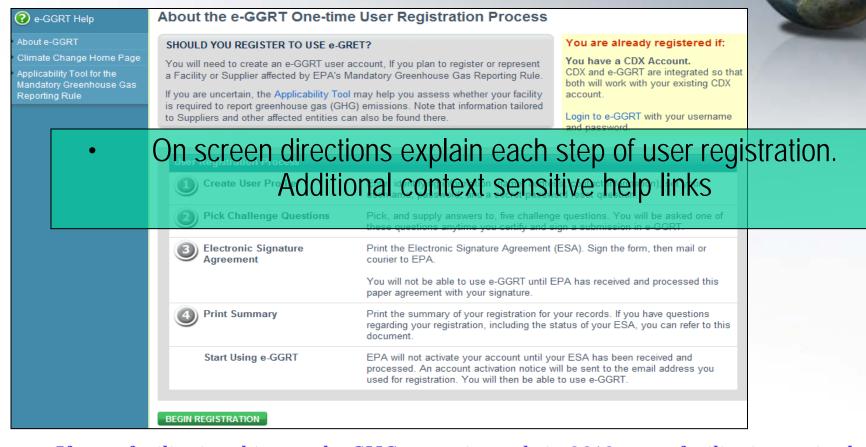

- All reporting under the GHG Reporting Program will be electronic.
- Web-based system for facility/supplier to EPA reporting
 - Web-forms will guide reporters through data entry and submission.
 - Include a mechanism to submit file directly using Extensible Markup Language (XML) format.
 - XML schema is available on the EPA website.
- For updates on the data system, training schedule, and to view the XML schema:

http://www.epa.gov/ghgreporting/reporters/datasystem/index.html

Note: Subparts LL and MM must report using the Office of Transportation and Air Quality Fuels Registration (OTAQREG) system.

e-GGRT User and Facility Registration

If your facility is subject to the GHG reporting rule in 2010, your facility is required to register with the e-GGRT system by August 1, 2011. If your facility triggers the rule during 2011, you would be required to register your facility 60 days before submission of your initial report (i.e., July 30, 2012).

GHG Data Publication

- EPA plans to publish collected through the GHG RP on the web
- EPA will only publish non-CBI data
 - CBI data will be aggregated to shield sensitive information
- EPA is developing a publication tool for the GHG RP data
 - Display facilities on a map
 - Create charts, graphs, and lists
 - Download data
 - Leverage social media

Goals for Data Publication

- Increase understanding of the sources of GHG emissions in the U.S. among the public
- Encourage voluntary reductions of emissions
- Improve quality of reported data
- Support regional, state, and local programs
- Information to be displayed in a simple, transparent manner

Confidential Business Information (CBI)

- EPA will protect any information claimed as CBI in accordance with regulations in 40 CFR Part 2, subpart B
- In general, emissions data collected under CAA sections 114 and 208 cannot be considered CBI.
- EPA published a determination on which data elements reported for 2010 source categories are CBI in 5/26/11 FR and intends to publish determinations for 2011 source categories.
- EPA has deferred the reporting of data elements that are inputs to emission equations to better assess implications of its collection and public release. See 8/25/11 Federal Register notice for list of these data elements.

Part 4. Subpart C: Stationary Fuel Combustion Sources

What Units Are Covered?

- Devices that combust solid, liquid, or gaseous fuel for:
 - producing electricity, generating steam, or providing useful heat or energy for industrial, commercial, or institutional use, or
 - reducing the volume of waste by removing combustible matter
- Examples:
 - Boilers
 - Stationary Internal Combustion Engines
 - Process Heaters
 - Combustion Turbines
 - Incinerators
 - Other Stationary Fuel Combustion Equipment (e.g. control devices)
- Covers any fuel combustion device, unless specifically exempted

Subpart C Does Not Apply to These:

- Portable equipment
- Emergency generators and emergency equipment
- Agricultural irrigation devices
- Flares, unless otherwise required by another subpart
- Electricity Generating Units subject to subpart D
- Hazardous waste combustion (exemption does not apply to co-fired fuels listed in Table C-1 or units using CEMS to quantify CO2 mass emissions)
- Pilot lights

Applicability

Three ways for subpart C to apply:

- Facility contains a source category in Table A-3, or
- Facility contains a source category in Table A-4 and emits 25,000 metric tons CO2e/year from stationary fuel combustion, miscellaneous use of carbonates, and all applicable source categories,* or
- Facility emits 25,000 metric tons CO2e/year from all stationary fuel combustion units (facilities with maximum aggregate heat input capacity of less than 30 mmBtu/hr will emit less than 25,000 metric tons CO2e/year)

^{*}Exception: Onshore petroleum and natural gas production facilities and natural gas distribution facilities report emissions from stationary combustion sources under Subpart W.

What GHGs Are Reported?

- CO2 from fossil fuel and biomass
 - Four different methods (Tiers) for calculating CO2 emissions
 - Different Tiers are used based on unit size, fuel type, other factors
 - Separately estimate CO2 from sorbent used for acid gas control (unless CO2 is measured with CEMS)
 - A fifth alternative is provided for estimating CO2 from certain units reporting heat input to EPA year-round under part 75 [98.33(a)(5)]
- CH4 and N2O
 - Emission factors

CO2 Emission Calculation Tiers

Tier	For this fuel	Measure these parameters	And use a default factor for
1	60 fuels ¹	Annual fuel use	HHV
			CO2 emission factor
	60 fuels ¹	Annual fuel use	CO2 emission factor
2		HHV	
	MSW	Steam generation	CO2 emission factor
3	Solid/liquid	Annual fuel use	
		Carbon content	
	Gas	Annual fuel use	
		Carbon content	
		Molecular weight	
4	All	CO2	

¹Any of the fuels listed in Table C-1 of subpart C, except MSW units that generate steam.

Tier 1 Monitoring: Fuel Use

Use "company records"

- Direct measurements of fuel consumption by gravimetric or volumetric means
- Tank drop measurements
- Engineering calculations (e.g., using generation or unit operating hours)
- Fuel billing records
- Other

Must maintain records of methods used

Tier 2 Monitoring: HHV

- Fuel use
 - Company records
- High heating value of fuel. Minimum sampling frequency:
 - Natural gas: Semiannual
 - Coal and fuel oil, and other solid and liquid fuels delivered in lots:
 Each fuel lot (shipment or delivery)
 - Other liquid fuels, fossil fuel-derived gas fuels, and biogas: Quarterly
 - Other solid fuels (except MSW): Weekly sample and monthly analysis

Tier 3 Monitoring: Fuel Carbon Content

- Fuel use
 - Solid fuel: Company records
 - Liquid fuel: Flow meter, billing meter, or tank drop measurements
 - Gaseous fuel: Flow meter or billing meter
- Minimum fuel sampling frequency (carbon):
 - Same as for Tier 2, except
 - Other gaseous fuels: Daily (if equipment in place) or weekly

Tier 4 Monitoring (CEMS)

Install CO2 and volumetric flow rate monitor

- O2 monitor may be used in some situations
- Calculate hourly mass emission rates
- Sum to quarterly and annual emissions

Use of Tier 1 (measure fuel use only)

Tier 1 may be used in these situations:

- Unit ≤250 mmBtu/hour & fuel listed in Table C-1*
- Units of any size:
 - Municipal solid waste (MSW) unit that does not produce steam
 - MSW unit burning ≤ 1,000 tons MSW per year
 - MSW and/or tires provides ≤10% annual heat input
 - Natural gas if consumption is obtained from billing records that are expressed in therms or mmBtu
 - Biomass fuels listed in Table C-1 *

*If HHV data are available at the minimum required frequency, Tier 2 must be used.

Use of Tier 2 (measure fuel use & HHV)

Tier 2 may be used in 2 situations:

- Unit ≤ 250 mmBtu/hour and fuel listed in Table C-1 (60 fuels)
- Natural gas, distillate fuel oil, or biomass fuels in unit of any size

Tier 2 must be used if HHV data are available at the minimum required frequency

MSW unit that produces steam must use Tier 2

Use of Tier 3 (measure fuel use & carbon content)

Tier 3 must be used in 2 situations:

- Unit > 250 mmBtu/hour for any fuel listed in Table C-1, except:
 - Natural gas, distillate fuel oil, and biomass fuels
 - MSW
 - If Tier 4 is required
- Unit > 250 mmBtu/hour and a fuel not listed in Table C-1, only if:
 - The fuel provides 10% or more of annual heat input to the unit, and
 - Tier 4 is not required

Use of Tier 4 (CEMS) (large units)

For large units, required if ALL six requirements are met:

- 1. Unit has CEMS that is required by regulation or permit.
- 2. Unit >250 mmBtu/hr, or >600 tons per day of MSW.
- 3. Solid fossil fuel or MSW is primary fuel.
- 4. Unit operated >1,000 hours in any calendar year since 2005.
- 5. CEMS has a gas monitor of any kind <u>or</u> a stack gas volumetric flow rate monitor
- 6. Monitors undergo periodic QA testing under part 75, NSPS, or State program.

Use of Tier 4 (CEMS) (small units)

For small units, required if ALL six requirements are met:

- 1. Unit has CEMS that is required by regulation or permit.
- 2. Unit ≤ 250 mmBtu/hr, or ≤ 600 tons per day of MSW.
- 3. Solid fossil fuel or MSW is primary fuel.
- 4. Unit operated >1,000 hours in any calendar year since 2005.
- 5. CEMS has a CO₂ monitor <u>and</u> a stack gas volumetric flow rate monitor
- 6. Monitors undergo periodic QA testing under part 75, NSPS, or State program.

Pollution Control Units

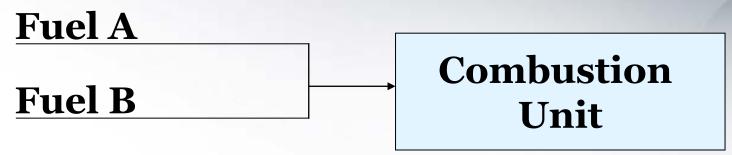

- Hazardous Waste combustors
 - Use CO2 CEMS if already present
 - Otherwise, report only fuels listed in Table C-1
- Pollution control units <250 MMBtu/hour
 - Report only fuels listed in Table C-1
- Pollution control units >250 MMBtu/hour
 - Report fuels listed in Table C-1, and
 - Any other fuel that provides ≥10% annual heat input to the unit

Blended Fuels (1)

Fuels blended onsite at reporting facility

- 1. Measure the quantity of each fuel separately
- 2. Apply the appropriate tier to each fuel
- 3. The fact that fuels are blended prior to combustion is of no consequence (i.e., report emissions from each fuel separately)

Blended Fuels (2)

Fuels received at facility as blend

Combustion Unit

Tier 1

- 1. Estimate relative portion of each fuel using best available information
- 2. Calculate a heat-weighted average CO2 emission factor
- 3. Calculate a fuel-weighted default HHV of the blend
- 4. Apply Tier equation

Tier 2

Same as Tier 1 except use a measured HHV of the blend in Step 3

Tier 3

Measure the carbon content (and molecular weight for gases) of the mixed fuel (treat the blend as the "fuel type")

What Must Be Reported?

- Biogenic CO2, non-biogenic CO2, N2O, and CH4
- Reporting is at unit level (each fuel) with some exceptions (see §98.36(c)):
 - Aggregate units ≤250 mmBtu/hr by fuel
 - Units served by common fuel pipe
 - Units sharing common stacks using CEMS
 - Attribute all emissions to large units when they use at least 95% of a commonly metered liquid or gas fuel.
- Verification data specified at §98.36(e)

Requirements for Biomass

- Biomass CO2 emissions are not considered in determining applicability, but are reported separately if a facility is subject to the rule
- CH4 and N2O emissions from biomass combustion are considered in applicability determinations and are reported
- Estimate biogenic GHG emissions for fuels listed in Table C-1, and for non-Table C-1 fuels if the unlisted fuel contributes >10% of annual heat input in a unit >250 mmBtu/hr
 - Wood and Wood Residuals
 - Agricultural Byproducts (non-food parts of crops)
 - Peat
 - Solid byproducts (other plant matter, animal materials/waste, etc.)
 - Biogas (captured methane)
 - Ethanol
 - Biodiesel
 - Rendered Animal Fat
 - Vegetable Oil
- MSW and tires are considered partially biogenic

Calculating Biogenic CO2 from Mixed Biomass and Fossil Fuels

- If no CEMS
 - Part 98 equation for applicable Tier for each biomass fuel and company records for amount of biomass combusted
- If use CEMS
 - Part 98 equation for applicable Tier (as above) or
 - Equations using F-factors, or
 - ASTM D7459-08 and D6866-06a (quarterly)
- If you are monitoring heat input year round under part 75 (optional method)
 - Estimate heat input from the biomass fuels using part
 75 data reports or best available information, and use
 Table C-1 emission factors to calculate biogenic CO2.

Calculating Biogenic CO2 from Tires

If burning tires, reporting biomass is optional

- Use Tier 1, 2, 3, or 4 (as applicable) for total CO2 and ASTM D7459-08 and D6866-06a (quarterly), or
- Tier 1 and default value of 20% for biogenic fraction if
 MSW and tires (combined) ≤10% annual heat input

Calculating Biogenic CO2 from MSW

If burning MSW

- Tier 1, 2, or 4 (CEMS), as applicable, for total CO2 and ASTM D7459-08 and D6866-06a (quarterly)

or

 Tier 1 and default value of 60% for biogenic fraction if ≤1,000 tpy MSW, or MSW and tires (combined) ≤10% annual heat input

CH₄ and N₂O Calculation Methods

If you use this Tier for CO2	Measure these parameters ¹	And use a default factor for
Tier 1 or Tier 3	Annual fuel use	HHV CH_4 emission factor N_2O emission factor
Tier 2 Fuel Option (Eq. C-9a)	Annual fuel use HHV	$\mathrm{CH_4}$ emission factor $\mathrm{N_2O}$ emission factor
Tier 2 Steam Option (Eq.C-9b)	Annual steam generation (converted to annual heat input)	$\mathrm{CH_4}$ emission factor $\mathrm{N_2O}$ emission factor
Tier 4	Annual heat input	$\mathrm{CH_4}$ emission factor $\mathrm{N_2O}$ emission factor

¹Use same values as used for CO₂ calculations

What Is Reported for Each Unit?

- Unit identification number
- Type of unit (code)
- Rated capacity
- Each fuel type burned
- Tier methodology used for CO2
- <u>For Tier 1-3</u>
 - CO2 emissions in metric tons for each fuel
 - CH4 and N2O emissions for each fuel (metric tons and CO2e)
 - Biogenic CO2 for all fuels combined
- For Tier 4
 - Total CO2 emissions measured by the CEMS
 - Biogenic CO2 emissions
 - Non-biogenic CO2 emissions
 - CH4 and N2O emissions for each fuel (metric tons and CO2e)
- CO2 sorbent emissions (if not using CEMS)
- Verification data
- Different reporting requirements may apply to units reporting under the alternative reporting options provided in 98.36

Part 5. Subpart D: Electricity Generation

Applicability

- Electric Generating Units (EGUs) that are required to monitor and report CO2 mass emissions year-round to EPA according to 40 CFR Part 75
 - Acid Rain Program
 - Other units reporting CO2 emissions under Part 75 (e.g. RGGI)
- EGUs not meeting the criteria specified above must report emissions under subpart C as applicable

How Does the GHGRP Affect Your Part 75 Reporting?

Not at all!!

- Same monitoring
- Same QA requirements
- Same reporting
- Same schedule

What Is Reported under GHGRP?

Annual CO2, CH4, and N2O emissions (metric tons/year) from:

- Part 75 EGUs
- EGUs that do not report under part 75
- All other stationary combustion units at the facility
- Any other applicable source category in part 98

How Do I Calculate GHG Emissions?

- Part 75 units
 - Convert annual part 75 CO2 emissions to metric tons/year
 - Use Eq. C-10 in subpart C for CH4 and N2O emissions (uses cumulative heat input monitored under part 75)
- EGUs not under Part 75
 - Use appropriate Tier method in subpart C
- Other stationary combustion units
 - Use appropriate Tier method in subpart C

Missing Data Requirements

- ARP units and units that report through part 75 must follow part 75
- All other combustion units must follow subpart C

Report Content for Part 75 Units

- Unit or stack identification
- For each monitoring location:
 - Annual CO2 for all fuels combined
 - Annual CO2 for all biomass fuels (starting in reporting year 2011)
 - Part 75 methodology used for CO2
 - Annual CH4 and N2O for each fuel (metric tons CO2e)
- For the source category:
 - -Annual Non-biogenic CO2 and biogenic CO2
 - -Annual CH4 and N2O in tons
