## WORK/QUALITY ASSURANCE PROJECT PLAN

### 1.0 GENERAL PROJECT INFORMATION

**Project Title:** USACE-NAE New Bedford Harbor LTM MDL Study  
**Project Number:** 100053747  
**Client:** USACE/NAE  
696 Virginia Road  
Concord, MA 01742  
USA  
**Client Contact Information:** Peter Hugh  
Engineering Technical Lead  
(978) 318-8452(V)  
NA  
NA  
**Effective Date of QAPP:** 10/9/2014  
**Version Number:** 100053747(S)-02  
**Project Manager:** Peven-McCarthy, Carole  
**Laboratory Task Manager:** Peven-McCarthy, Carole  
**Deliverable Due Date:** 11/3/2014

### 2.0 SCOPE OF WORK

**Overview:** A project-specific MDL study is required for this project.  
**Matrix:** Soil/Sediment

### 2.1 TECHNICAL APPROACH

#### 2.1.1 Sample Receipt, Storage, and Handling

The list of samples for this project plan are presented in Attachment 1.

**Storage Directions:** Store frozen.  
**Sub\_Sampling:** None  
**Procedures:** NA  
**Contact:** NA  
**Comment:** NA  
**Archiving:** NA  
**Disposal:** NA

## WORK/QUALITY ASSURANCE PROJECT PLAN

### 2.1.2 Sample Preparation

NA

| Samples Expected: | Samples Per Batch: | Batches Expected: |
|-------------------|--------------------|-------------------|
|                   | 20                 |                   |

Batch quality control samples are defined in Table 1.

Target samples are presented in Attachment 1.

**Table 1: Quality Control Samples**

| Type: | Description:                      | Count:      | Rgt: | Reference:  | Comment: |
|-------|-----------------------------------|-------------|------|---|----------|
| PB    | Laboratory control reagent blank. | 1 per batch | --   | NA  |          |
| LCS   | Laboratory Control Sample         | 1 per batch | No   | NA  |          |
| MDL   | Method Detection Limits           | 8 per batch | Yes  | 140304-02: Mud Dump<br>Reference N4415<br>Lot:N4415 |          |

### 2.1.3 Extraction/Preparation

#### 2.1.3.1 Extraction

|                           |  |
|---------------------------|--|
| SOP No.-Rev:              | <b>5-192-14</b>  |
| SOP Title:                | <i>Soil/Sediment Extraction for Trace Level Semi-Volatile Organic Contaminant Analysis</i> |
| Sample Size:              | 10 g   |
| SIS and LCS/MS Compounds: | Defined in Table 2.  |
| Deviations:               | NA   |
| Comments:                 | NA   |

**Table 2: SIS and LCS/MS Spiking Level**

| Standard Type       | Standard Contents | Spike Amount (ng) | Volume (uL) | Comment     |
|---------------------|-------------------|-------------------|-------------|-------------|
| PCB Surrogate       | ID59 SIS          | ~ 100 ng          | 100 uL      | NA          |
| ECD LCS/MS Solution | HX10 LCS/MS       | ~ 38 - 150 ng     | 75 uL       | LCS         |
| PDL spike ECD       | ID73 LCS/MS       | ~ 7.5 - 30.0 ng   | 150 uL      | MDL samples |

#### 2.1.3.2 Cleanup

## WORK/QUALITY ASSURANCE PROJECT PLAN

- |    |              |   |
|----|--------------|---|
| 1) | SOP No.-Rev: | <b>5-328-04</b>   |
|    | SOP Title:   | <i>Removal (cleanup) of Sulfur from Environmental Sample Extracts</i> |
|    | Deviations:  | NA  |
|    | Comments:    | NA  |
| 2) | SOP No.-Rev: | <b>5-327-04</b>   |
|    | SOP Title:   | <i>Florisil Cleanup of Environmental Sample Extracts</i>              |
|    | Deviations:  | Elute with Hexane only  |
|    | Comments:    | NA  |

RIS spiking levels are presented in Table 3.

Extract PIV (uL): 1000

**Table 3: RIS Spiking Level**

| Standard Type | Standard Contents | Spike Amount (ng) | Volume (uL) | Comment |
|---------------|-------------------|-------------------|-------------|---------|
| PCB IS        | IE11 RIS          | ~ 100 ng          | 100 uL      | NA      |

### 2.1.4 Instrumental Analysis

The list of analytes along with data quality criteria are presented in Attachment 2.

- |    |             |   |
|----|-------------|---|
| 1) | SOP_No-Rev: | <b>5-128-13</b>   |
|    | SOP_Title:  | <i>Identification and Quantification of Polychlorinated Biphenyls (By Congener and Aroclor) and Chlorinated Pesticides by Gas Chromatography/Electron Capture Detection</i> |
|    | Deviations: | NA  |
|    | Comments:   | Report SIS corrected data   |

### 2.2. DELIVERABLES

|                          |           |
|--------------------------|-----------|
| <b>Deliverables Due:</b> | 11/3/2014 |
| <b>LIMS Reports:</b>     | Yes       |
| <b>Histograms:</b>       | No        |
| <b>Excel Tables:</b>     | Yes       |
| <b>EICs:</b>             | No        |
| <b>Chromatograms:</b>    | No        |

## WORK/QUALITY ASSURANCE PROJECT PLAN

**EDDs:** *Yes*

**Comments:**

Required 30 day TAT.

EDD required.

Full data package (pdf) required for external validation.

Detailed quant reports are not required.

### 3.0 QUALITY

The Method Quality Objectives are defined in Attachment 3.

### 4.0 ORGANIZATION AND COMMUNICATION

#### 4.1 ORGANIZATION

The project team is defined in Table 4. Supervisors may make substitutions with Project Manager concurrence.

**Table 4: Project Team and Roles**

| Staff Member             | Role                    | Comment |
|--------------------------|-------------------------|---------|
| Carole S. Peven-McCarthy | Project Manager         | NA      |
| Samuel A. Guimaraes      | Sample Preparation      | NA      |
| Richard P. Restucci Jr   | GC/ECD Analysis         | NA      |
| Matt D. Schumitz         | Sample Custody          | NA      |
| Carla R. Devine          | Quality Control Officer | NA      |

#### 4.2 COMMUNICATION

A kick-off meeting will be held to discuss project scope and goals.

### 5.0 SCHEDULE

The project schedule is presented in Table 5.

**Table 5. Schedule of Laboratory Activities**

| Activity:           | Start Date: | End Date:  | TAT (days): | Comment: |
|---------------------|-------------|------------|-------------|----------|
| Sample Receipt      | 10/03/2014  | NA         | 0           | NA       |
| Sample Preparation  | 10/06/2014  | 10/09/2014 | 3           | NA       |
| Instrument Analysis | 10/09/2014  | 10/24/2014 | 15          | NA       |

## WORK/QUALITY ASSURANCE PROJECT PLAN

| Activity:              | Start Date: | End Date:  | TAT<br>(days): | Comment: |
|------------------------|-------------|------------|----------------|----------|
| Quality Control Review | 10/27/2014  | 10/29/2014 | 2              | NA       |
| Final Data Reporting   | 10/29/2014  | 10/31/2014 | 2              | NA       |

### 6.0 BUDGET

The labor budget for the analytical task is presented in Table 6.

**Table 6. Labor Budget (Laboratory Analytical Task)**

| Labor Activity:        | Hours/<br>Batch: | Batches: | Total<br>Hours: | Comment: |
|------------------------|------------------|----------|-----------------|----------|
| Sample Receipt         | 1                | 1        | 1               | NA       |
| Sample Preparation     | 24               | 1        | 24              | NA       |
| <i>Extraction</i>      | 20               |          |                 |          |
| <i>glassware</i>       | 4                |          |                 |          |
| Instrument Analysis    | 16               | 1        | 16              | NA       |
| <i>GC/ECD</i>          | 16               |          |                 |          |
| Quality Control Review | 3                | 1        | 3               | NA       |
| Final Data Reporting   | 1                | 1        | 1               | NA       |

# Sample Receipt Form

Approved:  Authorized

Project Number: 100043429 Client: USACE  
Received by: Schumitz, Matt Date/Time Received: Wednesday, October 01, 2014 12:00 AM  
No. of Shipping Containers: 1

## SHIPMENT

Method of Delivery: Hand Delivered Tracking Number: NA  
COC Forms:  Shipped with samples  No Forms

## Cooler(s)/Box(es)

| Cntr   | Type   | Tracking No. | Seal          | Seal Condition | Container Condition | Temp C | Smps |
|--------|--------|--------------|---------------|----------------|---------------------|--------|------|
| 1 of 1 | Cooler | NA           | Custody Seals | Intact         | Intact              | 1.2    | 60   |

## Samples

Sample Labels:  Sample labels agree with COC forms  
 Discrepancies (see Sample Custody Corrective Action Form)

Container Seals:  Tape  Custody Seals  Other Seals (See sample Log)  
 Seals intact for each shipping container  
 Seals broken (See sample log for impacted samples)

Condition of Samples:  Sample containers intact  
 Sample containers broken/leaking (See Custody Corrective Action Form)

Temperature upon receipt (°C): 1.2 Temperature Blank used  Yes  No  
*(Note: If temperature upon receipt differs from required conditions, see sample log comment field)*

Samples Acidified:  Yes  No  Unknown

Initial pH 5-9?:  Yes  No  NA  
*If no, individual sample adjustments on the Auxiliary Sample Receipt Form*

Total Residual Chlorine Present?:  Yes  No  NA  
*If yes, individual sample adjustments on the Auxiliary Sample Receipt Form*

Head Space <1% in samples for water VOC analysis:  Yes  No  NA  
*Individual sample deviations noted on sample log*

Samples Containers:  
Samples returned in PC-grade jars:  Yes  No  Unknown /Lot No.: UnKnown

Storage Location: Custody: Freezer - F0113 (NA) BDO IDs Assigned: M8347 - M8406

## Glossary of Data Qualifiers

**Flag: Application:**

---

- B Analyte concentration found in the sample at a concentration <5x the level found in the procedural blank.
- D Dilution Run. Initial run outside linear range of instrument.
- E Estimate, result is greater than the highest concentration level in the calibration.
- H Surrogate diluted out. Used when surrogate recovery is affected by excessive dilution of the sample extract.
- J Analyte detected below the sample-specific Reporting Limit (RL).
- m Confirmation column manually over-ridden by analyst, dual column quantitative analysis only.
- ME Significant Matrix Interference - Estimated value.
- MI Significant Matrix Interference - value could not be determined or estimated.
- n Quality Control (QC) value is outside the accuracy or precision Data Quality Objective (DQO), but meets the contingency criteria.
- N Quality Control (QC) value is outside the accuracy or precision Data Quality Objective (DQO)
- NA Not applicable
- p Dual column value exceeds RPD criteria, dual column quantitative analysis only.
- T Holding Time (HT) exceeded.
- U Analyte not detected at 3:1 signal:noise ratio.

**QA/QC Summary  
Batch 14-0496**

|                   |   |
|-------------------|---|
| Project:          | USACE/NAE – New Bedford Harbor Long Term Monitoring |
| Parameters:       | PCB Congeners (NOAA 18)                             |
| Laboratory:       | Battelle, Norwell, MA                               |
| Matrix:           | Sediment  |
| Data Set:         | DP-14-0678  |
| Analytical SOP:   | 5-128   |
| Method Reference: | EPA Method 8081B and 8082A (modified)               |

**Sample Custody**

| Collection Date | Receipt Date    | Temp (°C) |
|-----------------|-----------------|-----------|
| 9/22-30/2014    | 9/26, 10/1/2014 | 1.0, 1.2  |

|                    |   |
|--------------------|---|
| Corrective Actions | NA  |
| Sample Storage     | The sediment samples were stored frozen until extraction. |
| Related samples    | NA  |

**METHOD SUMMARIES**

|                    |  |
|--------------------|--|
| Sample Preparation | Prior to sediment extraction, an aliquot of approximately 30 g of wet sediment was placed on clean, labeled aluminum foil, covered and placed in a laboratory laminar flow hood to dry the sample to <50% moisture. Aliquots of these dried samples were weighed into sample extraction vessels for sample extraction. Approximately 2.5 to 10 g sediment was weighed out for extraction (sample weight based on historical analysis results). The sediments were spiked with surrogates, extracted three times with methylene chloride, and the extracts combined, dried over anhydrous sodium sulfate, and concentrated. The concentrated extracts were processed through Florisil to isolate the PCBs, followed by activated copper treatment to remove sulfur. The cleaned extract was concentrated and fortified with internal standard (IS) compounds prior to analysis by GC/ECD. |
| Prep Comments      | During Florisil columns, sample M8171 did not elute into the 40 mL vial. Per order of project manager, the sample will added to batch 14-0497 and caught up with the rest of the batch.  |

|                   |   |
|-------------------|---|
| Analysis          | PCBs were analyzed by gas chromatography electron capture detection (GC/ECD). An initial calibration consisting of target analytes was analyzed prior to sample analysis to demonstrate the linear range. Calibration verification was performed at the beginning and end of each 24-hr period in which samples were analyzed. Concentrations of target compounds were calculated versus internal standards using the average response factors (RF) generated from the initial calibration. |
| Analysis Comments | <ul style="list-style-type: none"> <li>Some congener concentrations were anomalous with surrounding analyte concentrations, or obvious chromatographic interferences were present, likely non-target congeners. In cases where an inflection point was detected in the affected peak, a vertical integration was performed</li> </ul>   |

**QA/QC Summary  
Batch 14-0496**

|  |   |
|--|---|
|  | <p>inside the peak to better represent the detected congener. Specific peaks where these interferences present themselves are PCBs 96, 28, 66, and 101. As these interferences are not matrix derived, but stem from additional, non-target congeners, the analytes are not ME qualified. A graphical representation of PCB 66 in sample M8402-P-D(5) is located in the unused data section for reference.</p> <ul style="list-style-type: none"> <li>• In cases where a congener exhibits dilution level concentrations on one column, but not the other, both columns are reported from dilution for consistency.</li> <li>• In cases where p qualifiers are present, integrations and data were reviewed.</li> <li>• Method MM0417C is a 6pt quadratic method used to quant all samples. After this batch was quantified, the analyst noticed that PCB 101 was identified incorrectly on the secondary (confirmation) column. A new method was created for PCB 101 only, and the samples re-quantified with the correctly identified peak. Method MM0417F is a 6pt quadratic method used to quant all undiluted samples and relevant dilutions for PCB 101.</li> </ul> |
|--|---|

| Holding Times | Extraction Date(s) | Analysis Date(s) |
|---------------|--------------------|------------------|
|               | 10/31/2014         | 11/7-9/2014      |

|                       |  |
|-----------------------|--|
| Procedural Blank (PB) | A PB was prepared with this analytical batch to ensure the sample extraction and analysis methods are free of contamination. |
| Blank value <5x ssMDL | No exceedances noted.  |
| Samples >5X PB        | No comments.   |

|                          |   |
|--------------------------|---|
| Laboratory Control Spike | A LCS was prepared with this analytical batch. The percent recoveries of target analytes were calculated to measure accuracy. |
| 70-130% recovery         | No exceedances noted.   |
|                          | No comments.  |

|  |   |
|--|---|
| Matrix Spike (MS)/Matrix Spike Duplicate (MSD) | A MS/MSD pair was prepared with this analytical batch. The percent recoveries of target analytes were calculated to measure accuracy. The relative percent difference (RPD) was calculated to measure data quality in terms of precision. |
| 70-130% recovery                               | No exceedances noted  |
| <30% RPD                                       | No comments.  |
| Spike must be >5x bkgd conc.                   |   |

**QA/QC Summary  
Batch 14-0496**

|                                   |   |
|-----------------------------------|---|
| Sample Duplicate (DUP)            | A laboratory duplicate of one sediment was prepared with the analytical batch. The relative percent difference (RPD) was calculated to measure data quality in terms of precision. <b>NOTE: This QC sample was inadvertently included in the sample batch instead of the requested SRM.</b> |
| <30% RPD<br>Conc must be >10X MDL | No exceedances noted.<br>No comments.   |

|                    |   |
|--------------------|---|
| Surrogate Recovery | Surrogate compounds were added prior to extraction. The surrogate recoveries are calculated to measure extraction efficiency. |
| 40-120% recovery   | No exceedances noted.<br>No comments.   |

|                            |  |
|----------------------------|--|
| Initial Calibration (ICAL) | The GC/ECD was calibrated with six-level quadratic calibration curve for all compounds using an instrument response factor (RF). |
| $R^2 \geq 0.995$           | No exceedances noted.<br>No comments.  |

|  |   |
|--|---|
| Independent Calibration Check (ICC)        | The independent check was run after each initial calibration to verify the calibration. This standard is from a different source than the ICAL. |
| $\leq 20\%$ difference individual and mean | No exceedances noted.<br>No comments.   |

|  |   |
|--|---|
| Continuing Calibration Verification (CCV)                      | Continuing calibration standards were run every 24 hours to ensure that initial calibration is still valid. |
| $\leq 20\%$ difference individual; $\leq 15\%$ difference mean | No exceedances noted.<br>No comments.   |

## BATTELLE - DUXBURY OPERATIONS MISCELLANEOUS DOCUMENTATION FORM

**Project Title:** USACE/NAE - New Bedford Harbor LTM      **Data Set Number:** DP-14-0678  
**Project Number:** 100053747      **Prep Batch Number:** 14-0496  
**Entered By:** Richard Restucci Jr      **Entered On:** 11/24/2014  
**Test Code (Matrix Type):** Master\_128(S)

Integrations by Rich Restucci.  
RR 11/24/14

Method MM0417C is a 6pt quadratic method used to quant all samples. After this batch was quantified, the analyst noticed that PCB 101 was identified incorrectly on the secondary (confirmation) column. A new method was created for PCB 101 only, and the samples re-quantified with the correctly identified peak.

Method MM0417F is a 6pt quadratic method used to quant all undiluted samples and relevant dilutions for PCB 101.  
RR 12/8/14

Method MM0417C utilizes the quant sheets from MM0417B.  
RR 11/24/14

Some congener concentrations were anomalous with surrounding analyte concentrations, or obvious chromatographic interferences were present, likely non-target congeners. In cases where an inflection point was detected in the affected peak, a vertical integration was performed inside the peak to better represent the detected congener. Specific peaks where these interferences present themselves are PCBs 96,161, 28, 66, and 101. As these interferences are not matrix derived, but stem from additional, non-target congeners, the analytes are not ME qualified. A graphical representation of PCB 66 in sample M8402-P-D(5) is located in the unused data section for reference.  
RR 11/24/14

In cases where a congener exhibits dilution level concentrations on one column, but not the other, both columns are reported from dilution for consistency.  
RR 11/24/14

In cases where p qualifiers are present, integrations and data were reviewed.  
RR 11/24/14

## WORK/QUALITY ASSURANCE PROJECT PLAN

### 1.0 GENERAL PROJECT INFORMATION

**Project Title:** USACE-NAE New Bedford Harbor LTM MDL Study  
**Project Number:** 100053747  
**Client:** USACE/NAE  
696 Virginia Road  
Concord, MA 01742  
USA  
**Client Contact Information:** Peter Hugh  
Engineering Technical Lead  
(978) 318-8452(V)  
NA  
NA  
**Effective Date of QAPP:** 10/9/2014  
**Version Number:** 100053747(S)-02  
**Project Manager:** Peven-McCarthy, Carole  
**Laboratory Task Manager:** Peven-McCarthy, Carole  
**Deliverable Due Date:** 11/3/2014

### 2.0 SCOPE OF WORK

**Overview:** A project-specific MDL study is required for this project.  
**Matrix:** Soil/Sediment

### 2.1 TECHNICAL APPROACH

#### 2.1.1 Sample Receipt, Storage, and Handling

The list of samples for this project plan are presented in Attachment 1.

**Storage Directions:** Store frozen.  
**Sub\_Sampling:** None  
**Procedures:** NA  
**Contact:** NA  
**Comment:** NA  
**Archiving:** NA  
**Disposal:** NA

## WORK/QUALITY ASSURANCE PROJECT PLAN

### 2.1.2 Sample Preparation

NA

| Samples Expected: | Samples Per Batch: | Batches Expected: |
|-------------------|--------------------|-------------------|
|                   | 20                 |                   |

Batch quality control samples are defined in Table 1.

Target samples are presented in Attachment 1.

**Table 1: Quality Control Samples**

| Type: | Description:                      | Count:      | Rgt: | Reference:  | Comment: |
|-------|-----------------------------------|-------------|------|---|----------|
| PB    | Laboratory control reagent blank. | 1 per batch | --   | NA  |          |
| LCS   | Laboratory Control Sample         | 1 per batch | No   | NA  |          |
| MDL   | Method Detection Limits           | 8 per batch | Yes  | 140304-02: Mud Dump<br>Reference N4415<br>Lot:N4415 |          |

### 2.1.3 Extraction/Preparation

#### 2.1.3.1 Extraction

|                           |  |
|---------------------------|--|
| SOP No.-Rev:              | <b>5-192-14</b>  |
| SOP Title:                | <i>Soil/Sediment Extraction for Trace Level Semi-Volatile Organic Contaminant Analysis</i> |
| Sample Size:              | 10 g   |
| SIS and LCS/MS Compounds: | Defined in Table 2.  |
| Deviations:               | NA   |
| Comments:                 | NA   |

**Table 2: SIS and LCS/MS Spiking Level**

| Standard Type       | Standard Contents | Spike Amount (ng) | Volume (uL) | Comment     |
|---------------------|-------------------|-------------------|-------------|-------------|
| PCB Surrogate       | ID59 SIS          | ~ 100 ng          | 100 uL      | NA          |
| ECD LCS/MS Solution | HX10 LCS/MS       | ~ 38 - 150 ng     | 75 uL       | LCS         |
| PDL spike ECD       | ID73 LCS/MS       | ~ 7.5 - 30.0 ng   | 150 uL      | MDL samples |

#### 2.1.3.2 Cleanup

## WORK/QUALITY ASSURANCE PROJECT PLAN

- |    |              |   |
|----|--------------|---|
| 1) | SOP No.-Rev: | <b>5-328-04</b>   |
|    | SOP Title:   | <i>Removal (cleanup) of Sulfur from Environmental Sample Extracts</i> |
|    | Deviations:  | NA  |
|    | Comments:    | NA  |
| 2) | SOP No.-Rev: | <b>5-327-04</b>   |
|    | SOP Title:   | <i>Florisil Cleanup of Environmental Sample Extracts</i>              |
|    | Deviations:  | Elute with Hexane only  |
|    | Comments:    | NA  |

RIS spiking levels are presented in Table 3.

Extract PIV (uL): 1000

**Table 3: RIS Spiking Level**

| Standard Type | Standard Contents | Spike Amount (ng) | Volume (uL) | Comment |
|---------------|-------------------|-------------------|-------------|---------|
| PCB IS        | IE11 RIS          | ~ 100 ng          | 100 uL      | NA      |

### 2.1.4 Instrumental Analysis

The list of analytes along with data quality criteria are presented in Attachment 2.

- |    |             |   |
|----|-------------|---|
| 1) | SOP_No-Rev: | <b>5-128-13</b>   |
|    | SOP_Title:  | <i>Identification and Quantification of Polychlorinated Biphenyls (By Congener and Aroclor) and Chlorinated Pesticides by Gas Chromatography/Electron Capture Detection</i> |
|    | Deviations: | NA  |
|    | Comments:   | Report SIS corrected data   |

### 2.2. DELIVERABLES

|                          |            |
|--------------------------|------------|
| <b>Deliverables Due:</b> | 11/3/2014  |
| <b>LIMS Reports:</b>     | <i>Yes</i> |
| <b>Histograms:</b>       | <i>No</i>  |
| <b>Excel Tables:</b>     | <i>Yes</i> |
| <b>EICs:</b>             | <i>No</i>  |
| <b>Chromatograms:</b>    | <i>No</i>  |

## WORK/QUALITY ASSURANCE PROJECT PLAN

**EDDs:** *Yes*

**Comments:**

Required 30 day TAT.

EDD required.

Full data package (pdf) required for external validation.

Detailed quant reports are not required.

### 3.0 QUALITY

The Method Quality Objectives are defined in Attachment 3.

### 4.0 ORGANIZATION AND COMMUNICATION

#### 4.1 ORGANIZATION

The project team is defined in Table 4. Supervisors may make substitutions with Project Manager concurrence.

**Table 4: Project Team and Roles**

| Staff Member             | Role                    | Comment |
|--------------------------|-------------------------|---------|
| Carole S. Peven-McCarthy | Project Manager         | NA      |
| Samuel A. Guimaraes      | Sample Preparation      | NA      |
| Richard P. Restucci Jr   | GC/ECD Analysis         | NA      |
| Matt D. Schumitz         | Sample Custody          | NA      |
| Carla R. Devine          | Quality Control Officer | NA      |

#### 4.2 COMMUNICATION

A kick-off meeting will be held to discuss project scope and goals.

### 5.0 SCHEDULE

The project schedule is presented in Table 5.

**Table 5. Schedule of Laboratory Activities**

| Activity:           | Start Date: | End Date:  | TAT (days): | Comment: |
|---------------------|-------------|------------|-------------|----------|
| Sample Receipt      | 10/03/2014  | NA         | 0           | NA       |
| Sample Preparation  | 10/06/2014  | 10/09/2014 | 3           | NA       |

# Sample Receipt Form

Approved:  Authorized

Project Number: 100043429 Client: USACE  
Received by: Schumitz, Matt Date/Time Received: Wednesday, October 01, 2014 12:00 AM  
No. of Shipping Containers: 1

## SHIPMENT

Method of Delivery: Hand Delivered Tracking Number: NA  
COC Forms:  Shipped with samples  No Forms

## Cooler(s)/Box(es)

| Cntr   | Type   | Tracking No. | Seal          | Seal Condition | Container Condition | Temp C | Smps |
|--------|--------|--------------|---------------|----------------|---------------------|--------|------|
| 1 of 1 | Cooler | NA           | Custody Seals | Intact         | Intact              | 1.2    | 60   |

## Samples

Sample Labels:  Sample labels agree with COC forms  
 Discrepancies (see Sample Custody Corrective Action Form)

Container Seals:  Tape  Custody Seals  Other Seals (See sample Log)  
 Seals intact for each shipping container  
 Seals broken (See sample log for impacted samples)

Condition of Samples:  Sample containers intact  
 Sample containers broken/leaking (See Custody Corrective Action Form)

Temperature upon receipt (°C): 1.2 Temperature Blank used  Yes  No  
*(Note: If temperature upon receipt differs from required conditions, see sample log comment field)*

Samples Acidified:  Yes  No  Unknown

Initial pH 5-9?:  Yes  No  NA  
*If no, individual sample adjustments on the Auxiliary Sample Receipt Form*

Total Residual Chlorine Present?:  Yes  No  NA  
*If yes, individual sample adjustments on the Auxiliary Sample Receipt Form*

Head Space <1% in samples for water VOC analysis:  Yes  No  NA  
*Individual sample deviations noted on sample log*

Samples Containers:  
Samples returned in PC-grade jars:  Yes  No  Unknown /Lot No.: UnKnown

Storage Location: Custody: Freezer - F0113 (NA) BDO IDs Assigned: M8347 - M8406

## Glossary of Data Qualifiers

**Flag: Application:**

---

- B Analyte concentration found in the sample at a concentration <5x the level found in the procedural blank.
- D Dilution Run. Initial run outside linear range of instrument.
- E Estimate, result is greater than the highest concentration level in the calibration.
- H Surrogate diluted out. Used when surrogate recovery is affected by excessive dilution of the sample extract.
- J Analyte detected below the sample-specific Reporting Limit (RL).
- m Confirmation column manually over-ridden by analyst, dual column quantitative analysis only.
- ME Significant Matrix Interference - Estimated value.
- MI Significant Matrix Interference - value could not be determined or estimated.
- n Quality Control (QC) value is outside the accuracy or precision Data Quality Objective (DQO), but meets the contingency criteria.
- N Quality Control (QC) value is outside the accuracy or precision Data Quality Objective (DQO)
- NA Not applicable
- p Dual column value exceeds RPD criteria, dual column quantitative analysis only.
- T Holding Time (HT) exceeded.
- U Analyte not detected at 3:1 signal:noise ratio.

**QA/QC Summary  
Batch 14-0497**

|                   |   |
|-------------------|---|
| Project:          | USACE/NAE – New Bedford Harbor Long Term Monitoring |
| Parameters:       | PCB Congeners (NOAA 18)                             |
| Laboratory:       | Battelle, Norwell, MA                               |
| Matrix:           | Sediment  |
| Data Set:         | DP-14-0679  |
| Analytical SOP:   | 5-128   |
| Method Reference: | EPA Method 8081B and 8082A (modified)               |

**Sample Custody**

| Collection Date | Receipt Date    | Temp (°C) |
|-----------------|-----------------|-----------|
| 9/22-30/2014    | 9/26, 10/1/2014 | 1.0, 1.2  |

|                    |   |
|--------------------|---|
| Corrective Actions | NA  |
| Sample Storage     | The sediment samples were stored frozen until extraction. |
| Related samples    | NA  |

**METHOD SUMMARIES**

|                    |  |
|--------------------|--|
| Sample Preparation | Prior to sediment extraction, an aliquot of approximately 30 g of wet sediment was placed on clean, labeled aluminum foil, covered and placed in a laboratory laminar flow hood to dry the sample to <50% moisture. Aliquots of these dried samples were weighed into sample extraction vessels for sample extraction. Approximately 5 to 10 g sediment was weighed out for extraction (sample weight based on historical analysis results). The sediments were spiked with surrogates, extracted three times with methylene chloride, and the extracts combined, dried over anhydrous sodium sulfate, and concentrated. The concentrated extracts were processed through Florisil to isolate the PCBs, followed by activated copper treatment to remove sulfur. The cleaned extract was concentrated and fortified with internal standard (IS) compounds prior to analysis by GC/ECD. <b>NOTE: This batch includes the project-specific MDL study as well as field samples.</b> |
| Prep Comments      | CD809PB and CD810LCS: Additional QC samples added to batch on 11/3/2014 because project manager was consulted and decided that another PB and LCS were needed for authentic samples due to different spike amounts.  |

|                   |   |
|-------------------|---|
| Analysis          | PCBs were analyzed by gas chromatography electron capture detection (GC/ECD). An initial calibration consisting of target analytes was analyzed prior to sample analysis to demonstrate the linear range. Calibration verification was performed at the beginning and end of each 24-hr period in which samples were analyzed. Concentrations of target compounds were calculated versus internal standards using the average response factors (RF) generated from the initial calibration. |
| Analysis Comments | <ul style="list-style-type: none"> <li>Some congener concentrations were anomalous with surrounding analyte concentrations, or obvious chromatographic interferences were present, likely non-target congeners. In cases where an inflection point was detected in the affected peak, a vertical integration was performed</li> </ul>   |

**QA/QC Summary  
Batch 14-0497**

|  |   |
|--|---|
|  | <p>inside the peak to better represent the detected congener. Specific peaks where these interferences present themselves are PCBs 96, 28, 66, and 101. As these interferences are not matrix derived, but stem from additional, non-target congeners, the analytes are not ME qualified. A graphical representation of PCB 66 in sample M8402-P-D(5) is located in the unused data section for reference.</p> <ul style="list-style-type: none"> <li>• In cases where a congener exhibits dilution level concentrations on one column, but not the other, both columns are reported from dilution for consistency.</li> <li>• In cases where p qualifiers are present, integrations and data were reviewed.</li> <li>• Method MM0417C is a 6pt quadratic method used to quant all samples. After this batch was quantified, the analyst noticed that PCB 101 was identified incorrectly on the secondary (confirmation) column. A new method was created for PCB 101 only, and the samples re-quantified with the correctly identified peak. Method MM0417F is a 6pt quadratic method used to quant all undiluted samples and relevant dilutions for PCB 101.</li> </ul> |
|--|---|

| Holding Times | Extraction Date(s) | Analysis Date(s) |
|---------------|--------------------|------------------|
|               | 11/3-4/2014        | 11/14-15/2014    |

|                       |  |
|-----------------------|--|
| Procedural Blank (PB) | A PB was prepared with this analytical batch to ensure the sample extraction and analysis methods are free of contamination. |
| Blank value <5x ssMDL | No exceedances noted.  |
| Samples >5X PB        | No comments.   |

|                          |   |
|--------------------------|---|
| Laboratory Control Spike | A LCS was prepared with this analytical batch. The percent recoveries of target analytes were calculated to measure accuracy. |
| 70-130% recovery         | No exceedances noted.   |
|                          | No comments.  |

|  |   |
|--|---|
| Matrix Spike (MS)/Matrix Spike Duplicate (MSD) | A MS/MSD pair was prepared with this analytical batch. The percent recoveries of target analytes were calculated to measure accuracy. The relative percent difference (RPD) was calculated to measure data quality in terms of precision. |
| 70-130% recovery                               | No exceedances noted  |
| <30% RPD                                       | No comments.  |
| Spike must be >5x bkgd conc.                   |   |

**QA/QC Summary  
Batch 14-0497**

|                        |   |
|------------------------|---|
| Sample Duplicate (DUP) | A laboratory duplicate of one sediment was prepared with the analytical batch. The relative percent difference (RPD) was calculated to measure data quality in terms of precision. <b>NOTE: This QC sample was inadvertently included in the sample batch instead of the requested SRM.</b> |
| <30% RPD               | No exceedances noted.   |
| Conc must be >10X MDL  | No comments.  |

|                    |   |
|--------------------|---|
| Surrogate Recovery | Surrogate compounds were added prior to extraction. The surrogate recoveries are calculated to measure extraction efficiency. |
| 40-120% recovery   | No exceedances noted.<br>No comments.   |

|                            |  |
|----------------------------|--|
| Initial Calibration (ICAL) | The GC/ECD was calibrated with six-level quadratic calibration curve for all compounds using an instrument response factor (RF). |
| $R^2 \geq 0.995$           | No exceedances noted.<br>No comments.  |

|  |   |
|--|---|
| Independent Calibration Check (ICC)        | The independent check was run after each initial calibration to verify the calibration. This standard is from a different source than the ICAL. |
| $\leq 20\%$ difference individual and mean | No exceedances noted.<br>No comments.   |

|  |   |
|--|---|
| Continuing Calibration Verification (CCV)                      | Continuing calibration standards were run every 24 hours to ensure that initial calibration is still valid. |
| $\leq 20\%$ difference individual; $\leq 15\%$ difference mean | No exceedances noted.<br>No comments.   |

## BATTELLE - DUXBURY OPERATIONS MISCELLANEOUS DOCUMENTATION FORM

**Project Title:** USACE/NAE - New Bedford Harbor LTM      **Data Set Number:** DP-14-0679  
**Project Number:** 100053747      **Prep Batch Number:** 14-0497  
**Entered By:** Richard Restucci Jr      **Entered On:** 11/25/2014  
**Test Code (Matrix Type):** Master\_128(S)

Integrations by Rich Restucci.  
RR 11/25/14

Method MM0417C is a 6pt quadratic method used to quant all samples. After this batch was quantified, the analyst noticed that PCB 101 was identified incorrectly on the secondary (confirmation) column. A new method was created for PCB 101 only, and the samples re-quantified with the correctly identified peak.

Method MM0417F is a 6pt quadratic method used to quant all undiluted samples and relevant dilutions for PCB 101.  
RR 12/8/14

Method MM0417C utilizes the quant sheets from MM0417B.  
RR 11/25/14

Some congener concentrations were anomalous with surrounding analyte concentrations, or obvious chromatographic interferences were present, likely non-target congeners. In cases where an inflection point was detected in the affected peak, a vertical integration was performed inside the peak to better represent the detected congener. Specific peaks where these interferences present themselves are PCBs 96,161, 28, 66, and 101. As these interferences are not matrix derived, but stem from additional, non-target congeners, the analytes are not ME qualified. A graphical representation of PCB 66 in sample M8402-P-D(5) is located in the unused data section for reference.  
RR 11/25/14

In cases where a congener exhibits dilution level concentrations on one column, but not the other, both columns are reported from dilution for consistency.  
RR 11/25/14

In cases where p qualifiers are present, integrations and data were reviewed.  
RR 11/25/14

Percent Dry Wt (%) = [(Sample Dry Wt. (g) - Tare Wt. (g))/(Aliquot Wet Wt. (g) - Tare Wt. (g))] \* 100

Sample Dry Wt. (%) = [(Sample Wet Wt. (g) \* (Percent Dry Wt./100)]

\* "C" = Sample Container Is Consumed

**Appendix F**  
Benthic Infauna Laboratory Data Report

## QUALITY ASSURANCE STATEMENT

*Client/Project:* Battelle

*Work Assignment Title:* New Bedford Harbor

*Description of Data Set or Deliverable:* 158 Benthic macroinvertebrate samples collected in September 2014; Modified Van Veen grabs.

*Description of audit and review activities:* Judged accuracy rates were well above standard levels for taxonomy. Laboratory QC reports were completed.

Copies of QC results follow (see attachment.) All taxonomic data were entered into the computer and printed. This list was checked for accuracy against original taxonomic data sheets.

*Description of outstanding issues or deficiencies, which may affect data quality:* None

Subject: NBH Data Validation

Dear Ms. Dahlen,

Enclosed are the final validation reports for the sample delivery groups (SDGs) listed below.

| <b><u>SDG #</u></b> | <b><u>Fraction</u></b> | <b><u>Date Received for Validation</u></b> |
|---------------------|------------------------|--|
| GTX302366           | Grain Size and TOC     | 1/6/15                                     |

The data validation was performed at Tier I+ level using the following guidelines, as applicable to each method:

- EPA New England Environmental Data Review Supplement for Regional Data Review Elements and Superfund Specific Guidance/Procedures, April 2013

Please feel free to contact me if you have any questions.

Sincerely,

Elizabeth Cutié  
Battelle Columbus Operations

## Data Validation Report

**Project Name:** New Bedford Harbor  
**Collection Date:** September 24-30, 2014  
**Report Date:** February 23, 2015  
**Matrix:** Sediment  
**Parameters:** Grain Size  
**Validation Level:** Tier I+  
**Laboratory:** Battelle  
**Sample Delivery Group (SDG):** GTX302366  
**Sample Identification:**

NBH14-0001 through NBH14-0329

## Introduction

This data review covers the sediment samples listed on the cover sheet. The samples were analyzed for grain size analyses by GeoTesting Express according to ASTM D422.

The laboratory selected 16 samples to analyze in duplicate. The following samples were analyzed in duplicate by the lab: NBH14-0010, 0028, 0050, 0066, 0086, 0110, 0125, 0149, 0173, 0188, 0200, 0242, 0262, 0282, 0311, and 0324.

The following grain size fractions were reported:

| <b>PARAM_CODE</b> | <b>DESCRIPTION</b>              |
|-------------------|---------------------------------|
| GRAVEL            | Gravel (>2.00 mm)               |
| SAND_VCO          | Very Course Sand (1.00-2.00 mm) |
| SAND_CO           | Course Sand (0.50-1.00 mm)      |
| SAND_MED          | Medium Sand (0.25-0.50 mm)      |
| SAND_FI           | Fine Sand (0.125-0.25 mm)       |
| SAND_VFI          | Very Fine Sand (0.063-0.125 mm) |
| SILT              | Silt (0.0039-0.0625 mm)         |
| CLAY              | Clay (<0.00391 mm)              |

A qualification summary is provided at the end of this report which details any data validation qualifiers that were assigned.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## New Bedford Harbor

### Grain Size - Data Qualification Summary - SDG GTX302366

| SDG       | Sample IDs          | Compound  | Flag      | Reason   |

## Data Validation Report

**Project Name:** New Bedford Harbor

**Collection Date:** September 22 - 30, 2014

**Report Date:** February 23, 2015

**Matrix:** Sediment

**Parameters:** Total Organic Carbon

**Validation Level:** Tier I+

**Laboratory:** Battelle

**Sample Delivery Group (SDG):** L14422692, L1423076, L1423331

**Sample Identification:**  
NBH14-0001 through NBH14-0329

## Introduction

This data review covers the sediment samples listed on the cover sheet. The samples were analyzed by Alpha Analytical for total organic carbon (TOC). The TOC reports are contained within GeoTesting Express report # GTX 302366 (Grain Size).

A qualification summary is provided at the end of this report which details any data validation qualifiers that were assigned.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

February 13, 2015

Ms. Deirdre Dahlen  
Battelle  
141 Longwater Drive  
Suite 202  
Norwell, MA 02061

Subject: NBH Data Validation

Dear Ms. Dahlen,

Enclosed are the final validation reports for the sample delivery groups (SDGs) listed below. These SDGs have been validated against the criteria in the long term monitoring (LTM) QAPP.

| <u>SDG #</u> | <u>Fraction</u>  | <u>Date Received for Validation</u> |
|--------------|------------------|-------------------------------------|
| 14-0493      | PCBs – Congeners | 1/6/15                              |
| 14-0494      | PCBs – Congeners | 1/6/15                              |
| 14-0495      | PCBs – Congeners | 1/6/15                              |
| 14-0595      | PCBs – Congeners | 1/6/15                              |

The data validation was performed at Tier I+ level using the following guidelines, as applicable to each method:

- EPA New England Environmental Data Review Supplement for Regional Data Review Elements and Superfund Specific Guidance/Procedures, April 2013
- EPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, June 2008
- EPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review, January 2010

Please feel free to contact me if you have any questions.

Sincerely,

Elizabeth Cutié  
Battelle Columbus Operations

## Introduction

This data review covers 20 sediment samples listed on the cover sheet. The analyses of PCB Congeners (18 congeners) were performed according to Battelle SOP 5-128 (GC/ECD).

The Duplicate Pair is NBH14-0232 and NBH14-0169.

A qualification summary is provided at the end of this report which details any data validation qualifiers that were assigned.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

**New Bedford Harbor  
PCB Congeners - Data Qualification Summary - SDG 14-0493**

| SDG     | Sample IDs | Compound          | Flag                                  | Reason  |
|---------|------------|-------------------|---------------------------------------|---|
| 14-0493 | NBH14-0161 | All reported PCBs | J/UJ<br>(detects<br>/non-<br>detects) | No/ Surrogates were diluted out of sample NBH14-0161. Dilutions were required because PCB congeners responded above the upper limit of the linear calibration. PCB results will be flagged J (detects) or UJ (non-detects) for the sample without surrogate recoveries. |

## Introduction

This data review covers 20 sediment samples listed on the cover sheet. The analyses of PCB Congeners (18 congeners) were performed according to Battelle SOP 5-128 (GC/ECD).

Duplicate Pair 1 is NBH14-0215 and NBH14-0219

Duplicate Pair 2 is NBH14-0121 (reported in dataset 14-0495) and NBH14-0234

A qualification summary is provided at the end of this report which details any data validation qualifiers that were assigned.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

## Introduction

This data review covers 20 sediment samples listed on the cover sheet. The analyses of PCB Congeners (18 congeners) were performed according to Battelle SOP 5-128 (GC/ECD).

Duplicate Pair 1 is NBH14-0181 and NBH14-0233

Duplicate Pair 2 is NBH14-0121 and NBH14-0234 (reported in dataset 14-0494)

A qualification summary is provided at the end of this report which details any data validation qualifiers that were assigned.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

Subject: NBH Data Validation

Dear Ms. Dahlen,

Enclosed is the final validation report for the sample delivery group (SDG) listed below.

| <u>SDG #</u> | <u>Fraction</u> | <u>Date Received</u> |
|--------------|-----------------|----------------------|
| 14-0497      | PCBs – Total    | 3/5/15               |

The data validation was performed at the Tier I+ level using the following guidelines, as applicable to each method:

- EPA New England Environmental Data Review Supplement for Regional Data Review Elements and Superfund Specific Guidance/Procedures, April 2013
- EPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review, June 2008

Please feel free to contact me if you have any questions.

Sincerely,

Elizabeth Cutié  
Battelle Columbus Operations

## Introduction

This data review covers 4 sediment samples listed on the cover sheet. The analyses of PCB Congeners (18 congeners) were performed according to Battelle SOP 5-128 (GC/ECD).

There was no Duplicate Pair in this dataset.

A qualification summary is provided at the end of this report which details any data validation qualifiers that were assigned.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.
