This wood-burning appliance meets 2020 U.S. Environmental Protection Agency clean air standards.

 Heating Area

 Heats Up To 2500 sq. ft.

 Efficiency

 83%

 Smoke Emissions

 EPA Maximum Allowed
 2.0 g/hr

 This model xx g/hr

 MANUFACTURER
 Wood Stove Inc.

 MODEL NO.
 1850M

 FUEL TESTED

 - Pellets: ground wood or biomass that is compressed into a pellet.
 - Crib wood: cut 2”x4” or 4”x 4” lumber that is stapled together.
 - Cord wood: typical firewood, and a better measure of how a heater will perform in homes.

 For more information, refer to the Owner’s Manual and www.epa.gov/burnwise.

 Efficiency and emissions are provided by an EPA-approved third party lab. Heating area is estimated by the manufacturer.
Have your heating appliance professionally installed and inspected annually by a certified technician.

Refer to your owner’s manual for start-up and operating guidelines.

Burn split, seasoned, dry firewood to save money and help protect your family’s health.

A smoldering fire, dirty glass doors, and chimney smoke are signs that the fire needs more air or your wood is not seasoned.

If you smell smoke indoors, it could be a health risk for you and your family. Call a certified chimney sweep or stove installer to correct the problem.

Store wood and pellets off the ground in a dry, covered place.

Perform weekly and monthly maintenance throughout the heating season or as recommended by the manufacturer.

For pellets: Use certified pellets as directed by your owner’s manual.

Non-certified pellets may be high in ash content, low in energy output, and have impurities that could harm your family’s health.
