Instructions for Downloading Files

With respect to the request for EPA to provide a copy of all models utilized by EPA's consultant TetraTech, and a copy of all data that was used in the models to produce the results of the model, EPA is making such files available on our website for downloading. EPA has grouped the modeling files into three categories (EFDC Executable Model and Input Files, LSPC Executable Model and Input Files, and Weather_files). In order for the executable model files to run properly, EPA recommends that the grouped files on the website be downloaded and saved into folders organized in the manner presented below.

The manuals for the Loading Simulation Program in C++ (LSPC) and the Environmental Fluid Dynamics Code (EFDC) models are publically available on EPA's website at http://www.epa.gov/athens/wwqtsc/html/lspc.html and http://www.epa.gov/athens/wwqtsc/html/efdc.html, respectively. These manuals are not subject to the solicitation for public comment.
