

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Aluminum, Dissolved for location SJMH

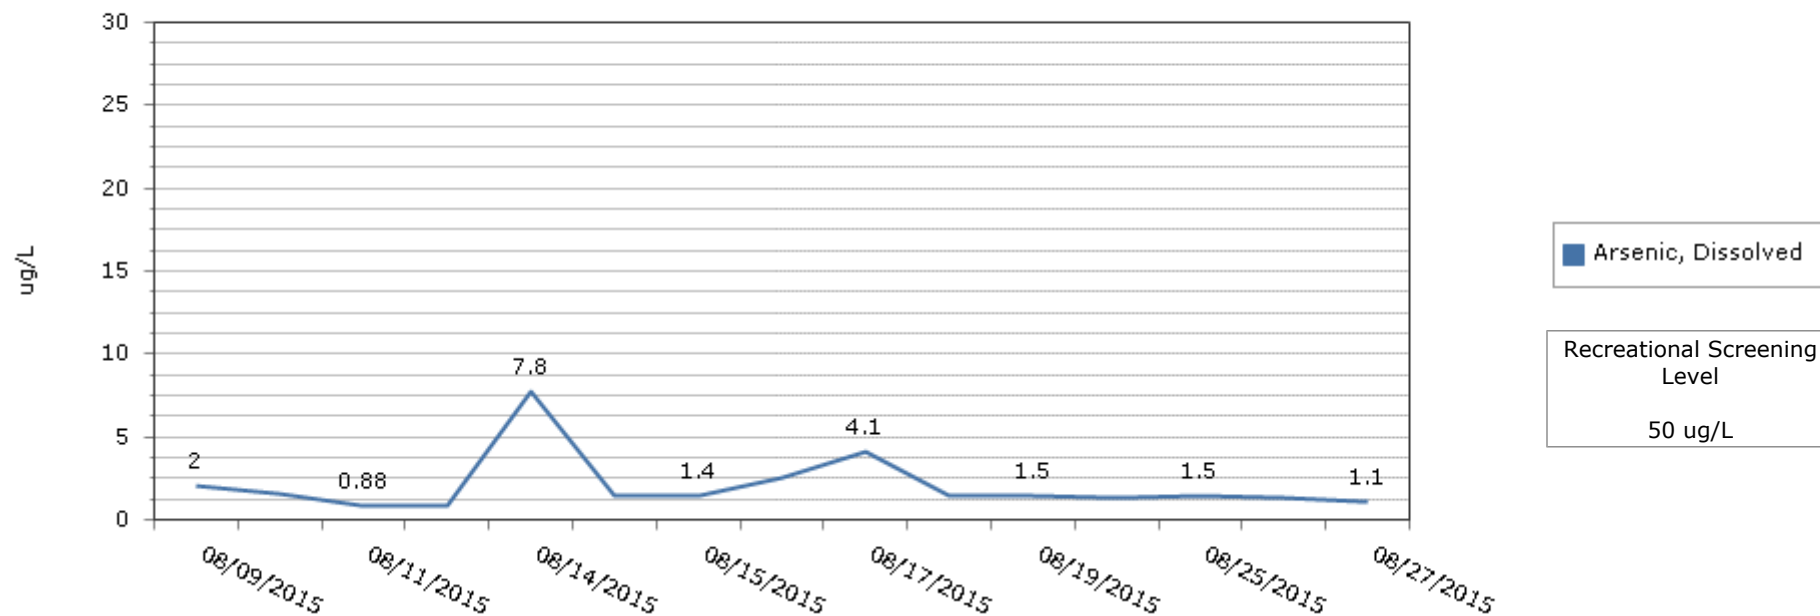

Antimony, Dissolved for location SJMH

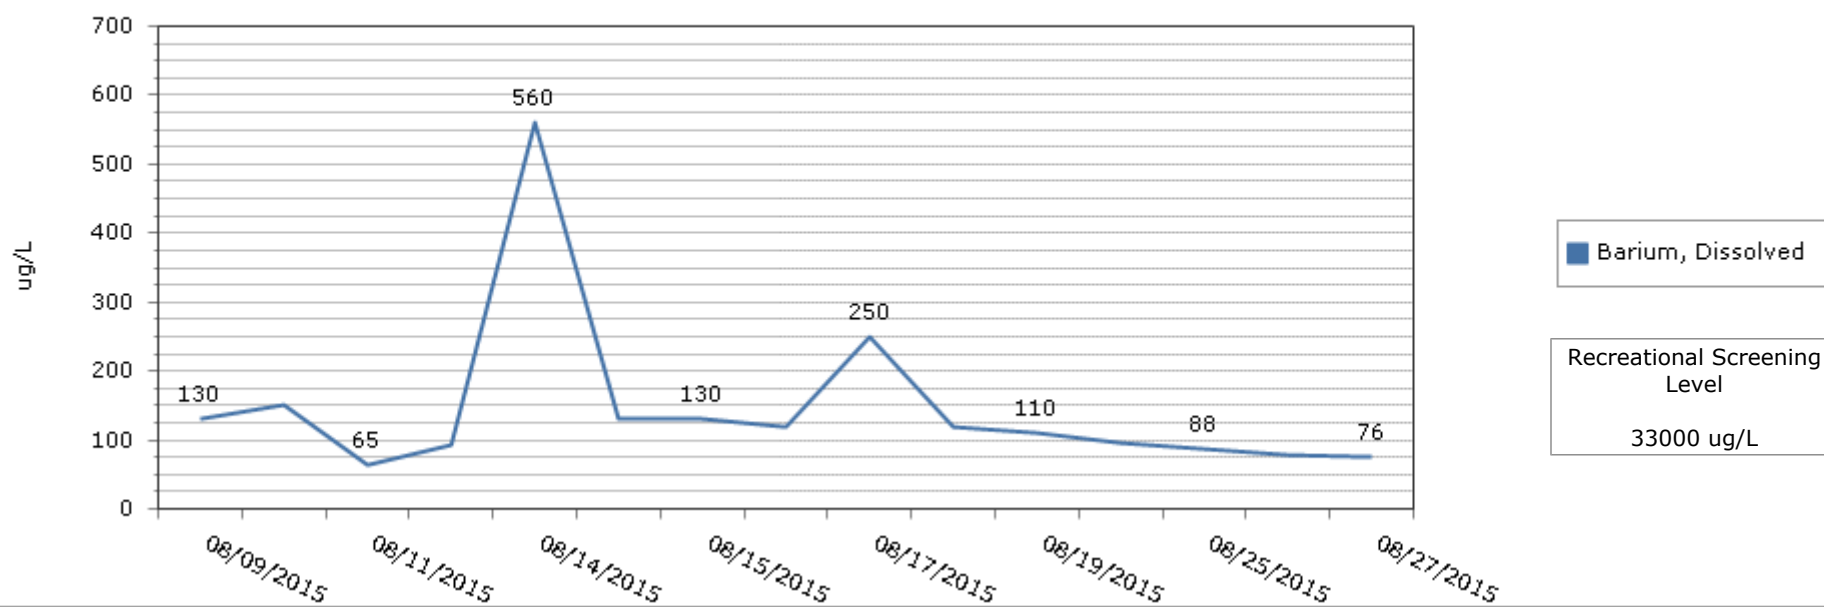

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Arsenic, Dissolved for location SJMH

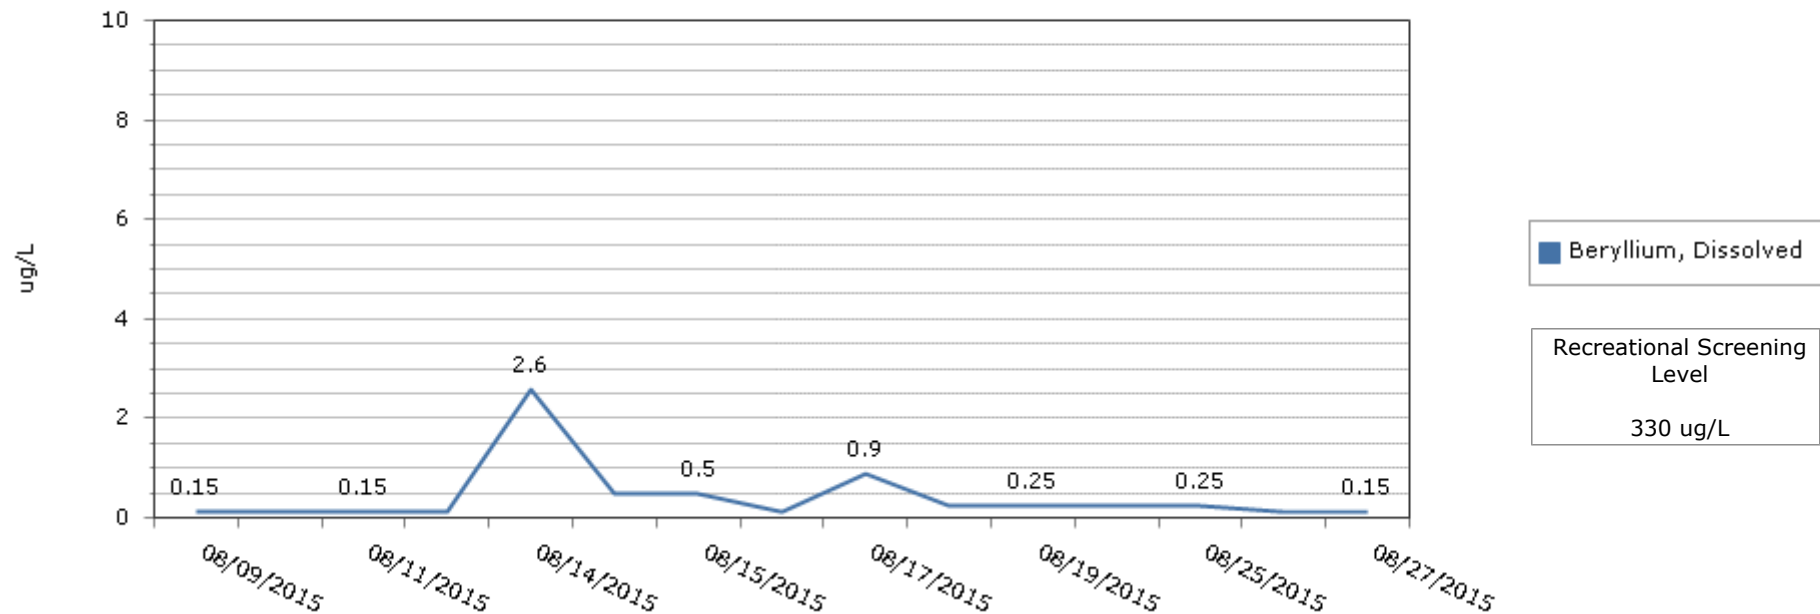

Barium, Dissolved for location SJMH

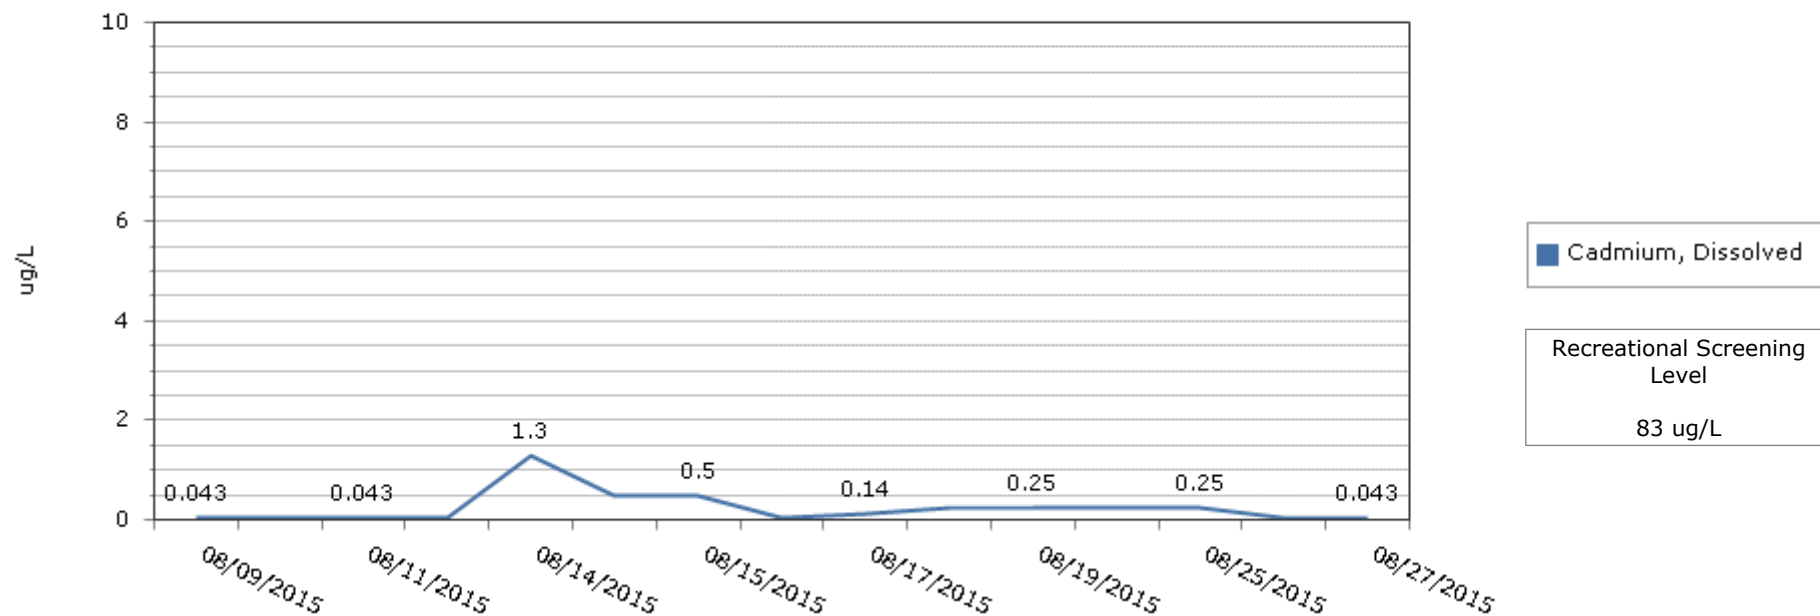

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Beryllium, Dissolved for location SJMH

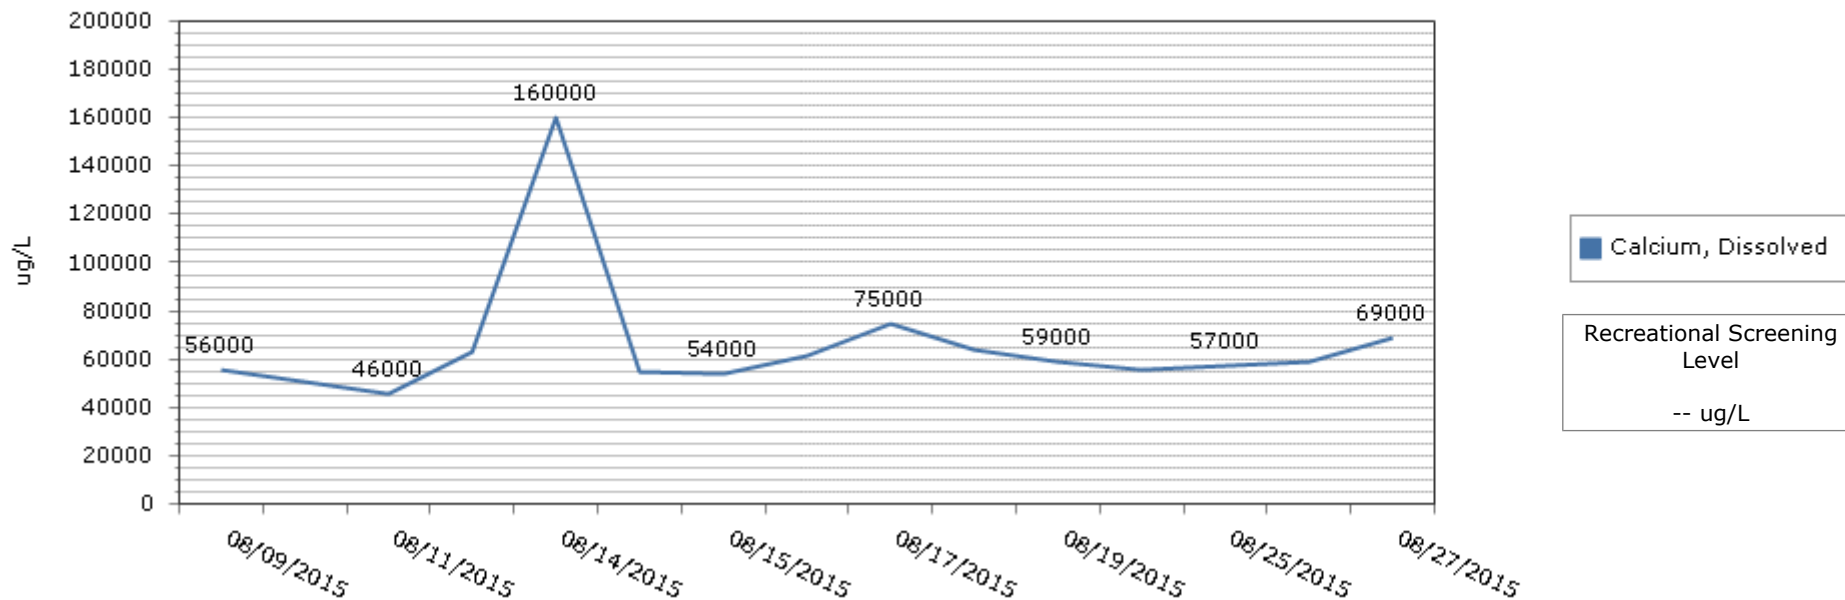

Cadmium, Dissolved for location SJMH

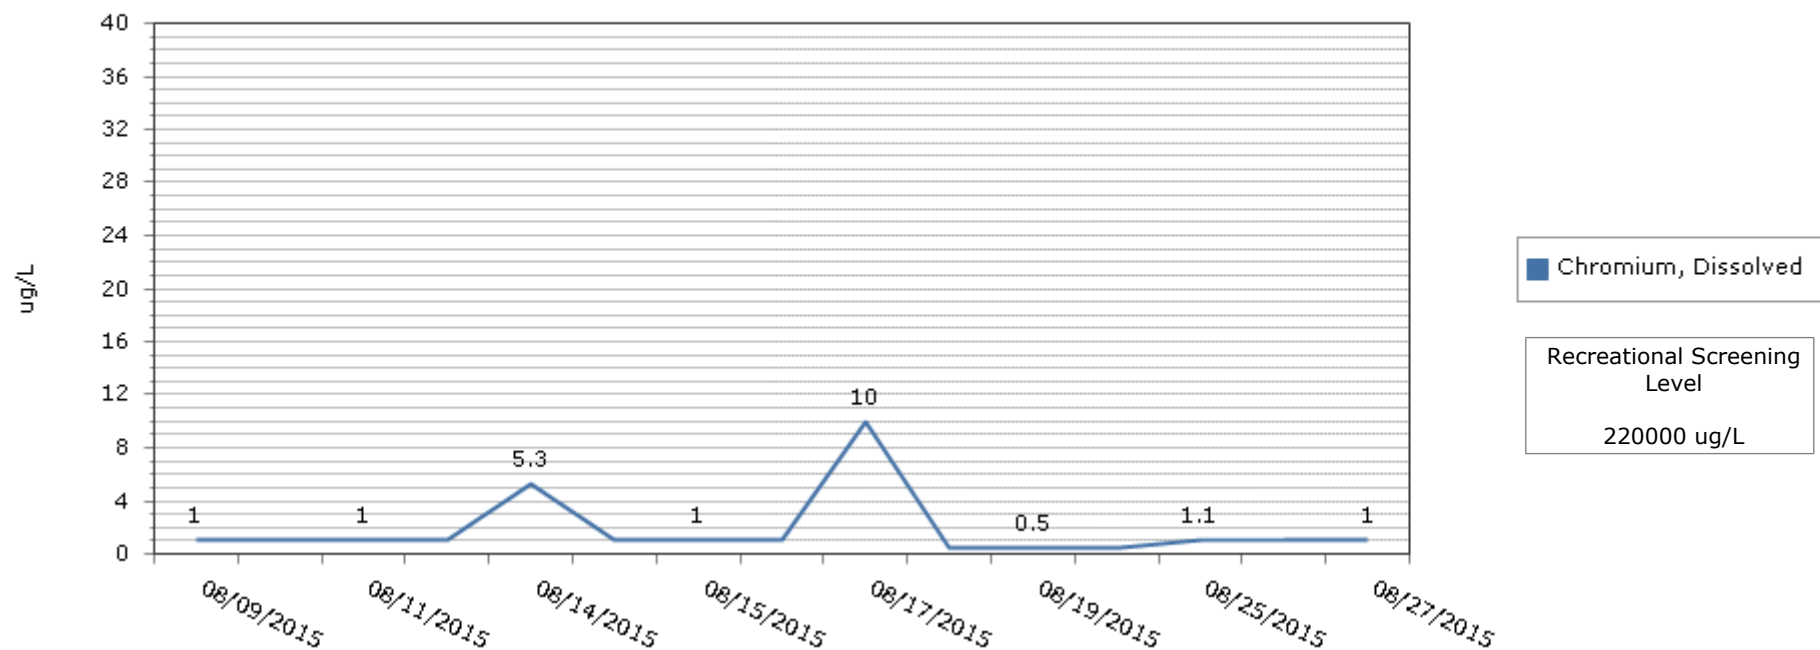

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Calcium, Dissolved for location SJMH

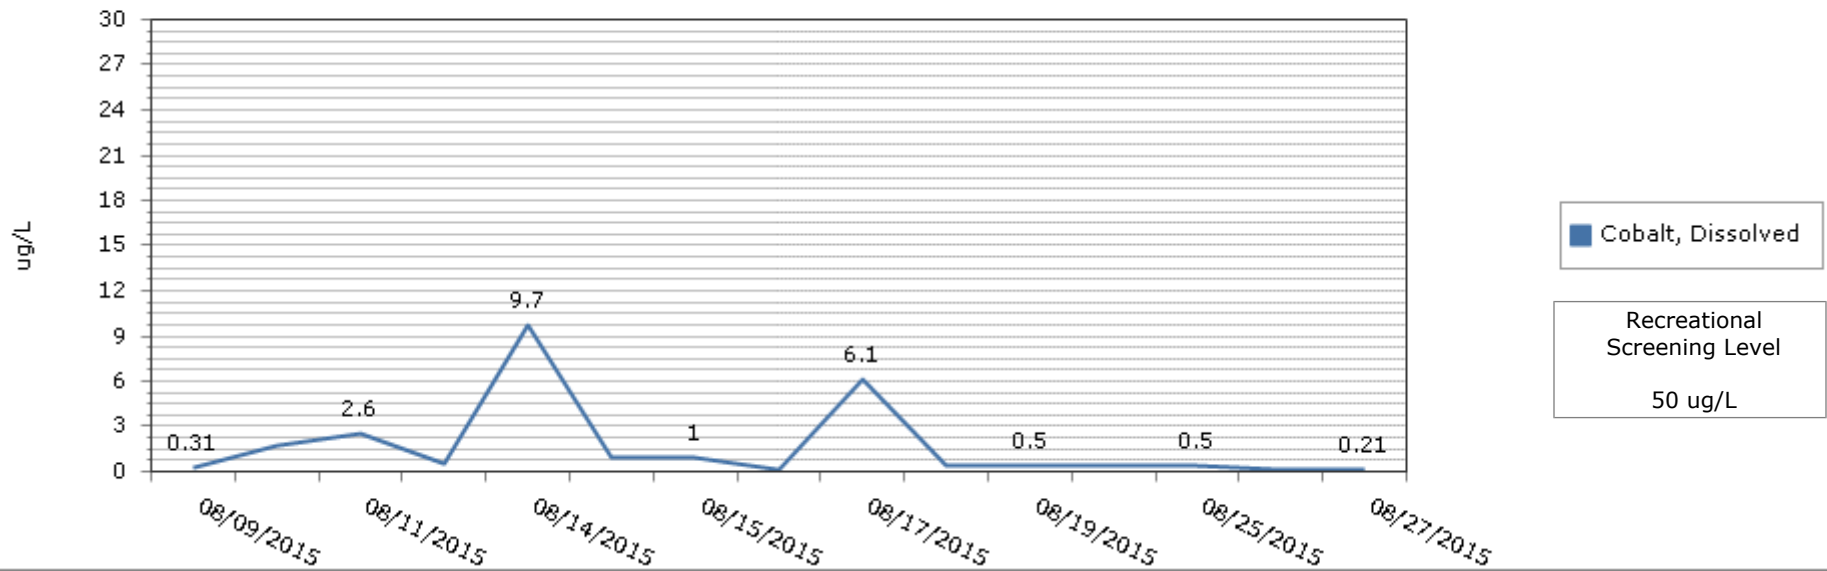

Chromium, Dissolved for location SJMH

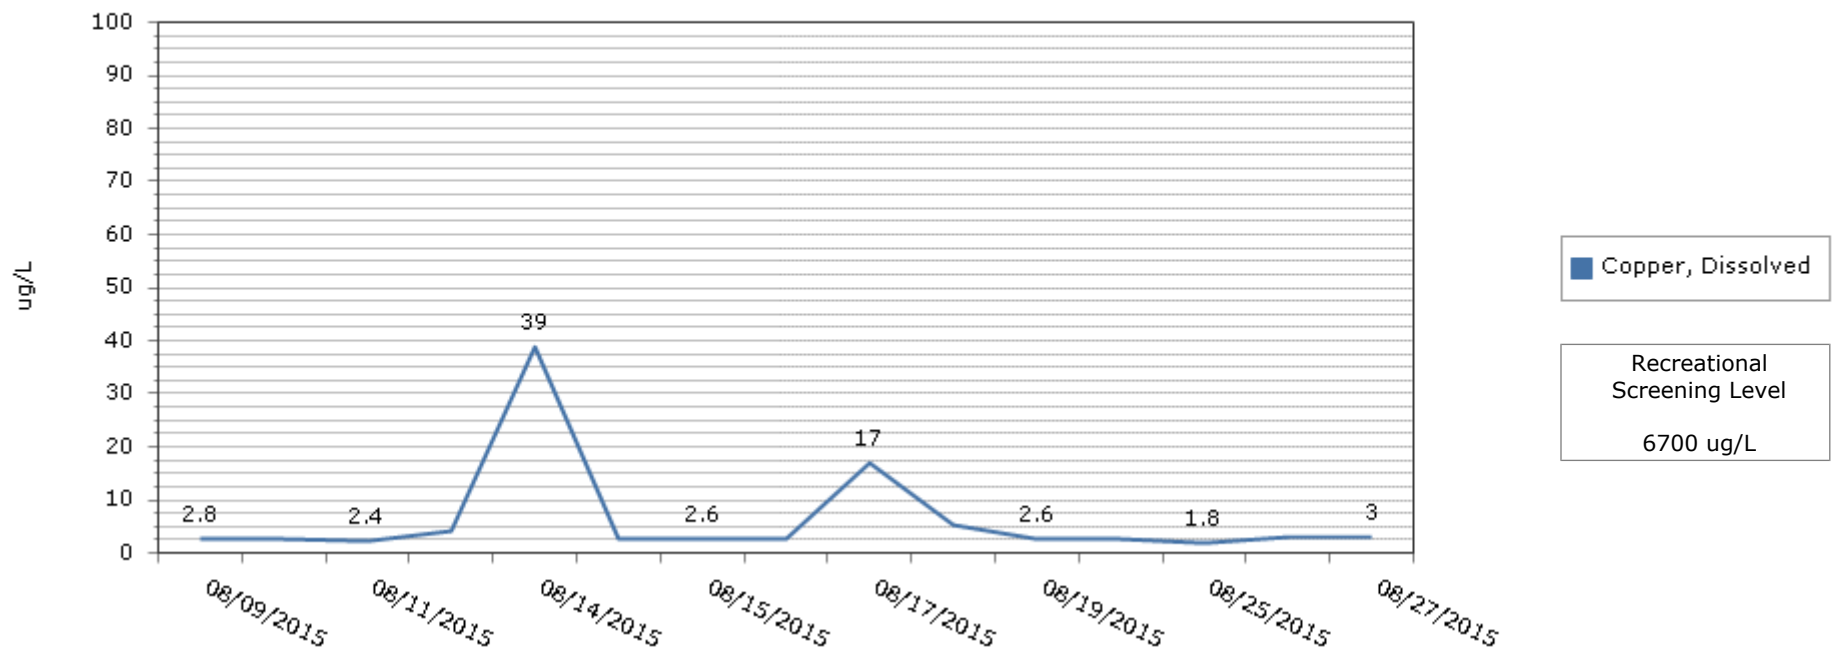

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Cobalt, Dissolved for location SJMH

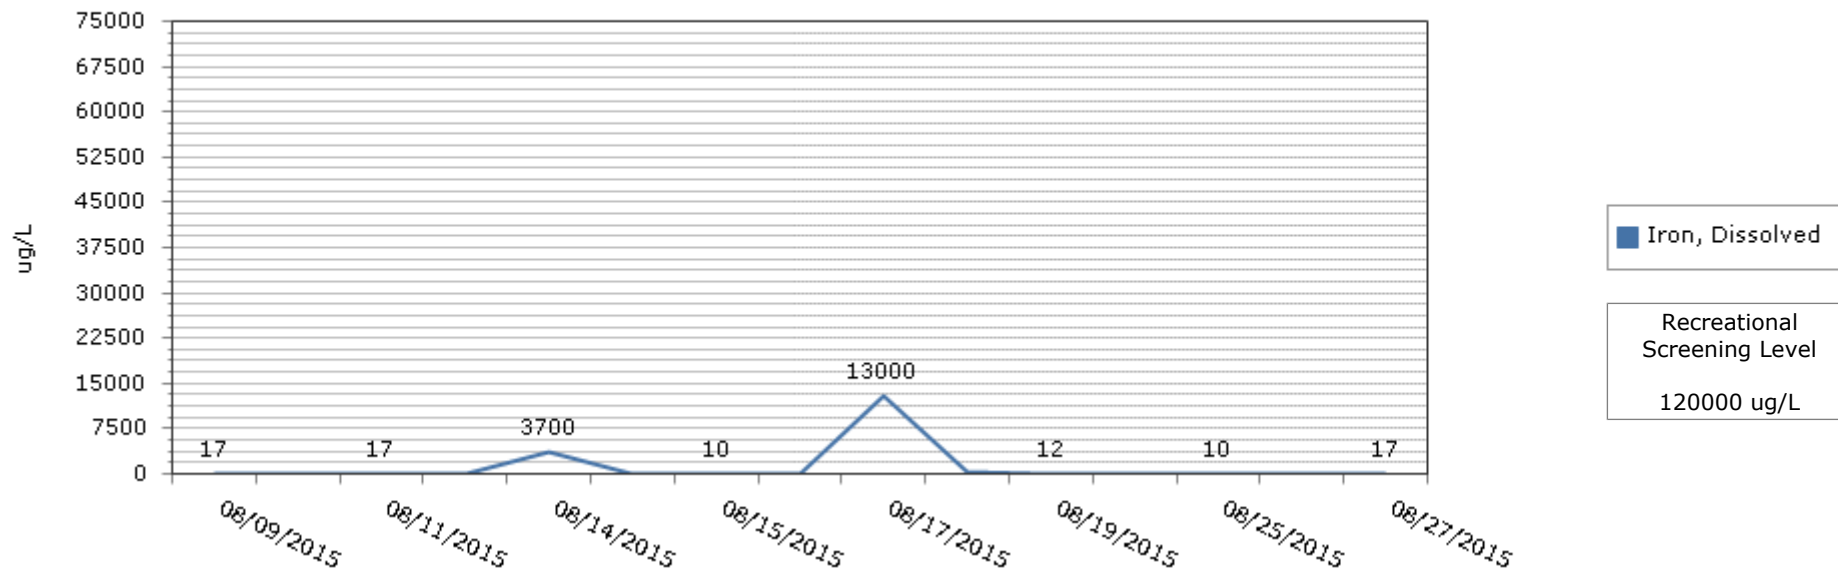

Copper, Dissolved for location SJMH

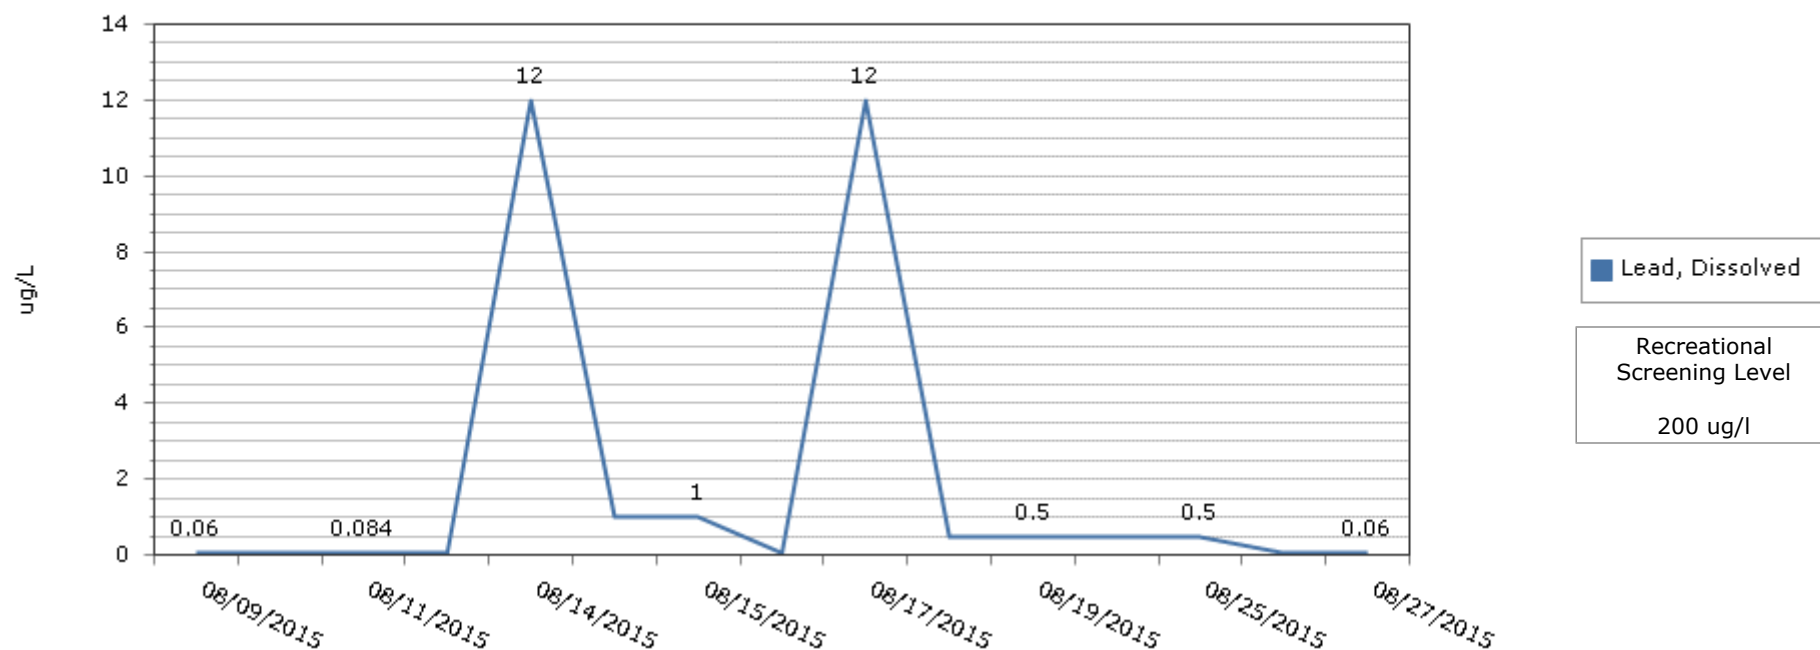

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Iron, Dissolved for location SJMH

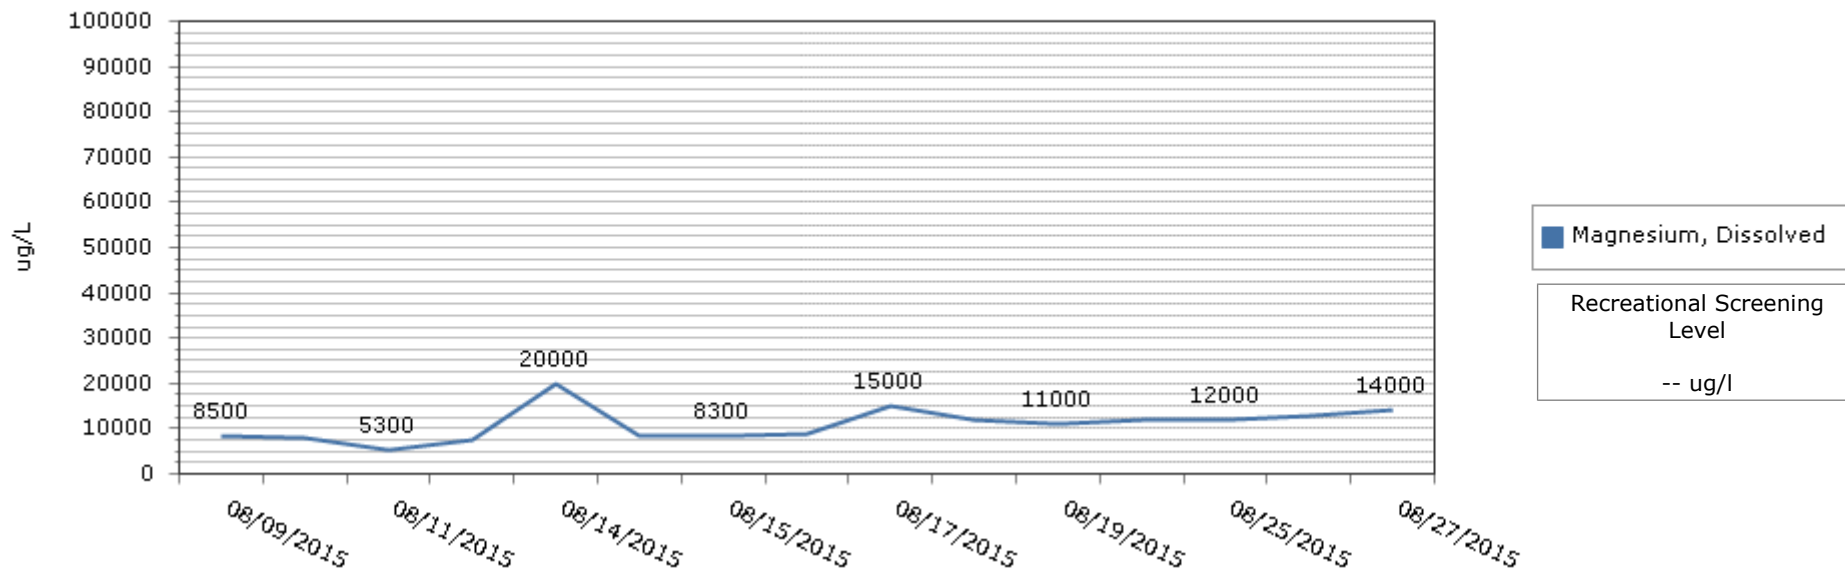

Lead, Dissolved for location SJMH

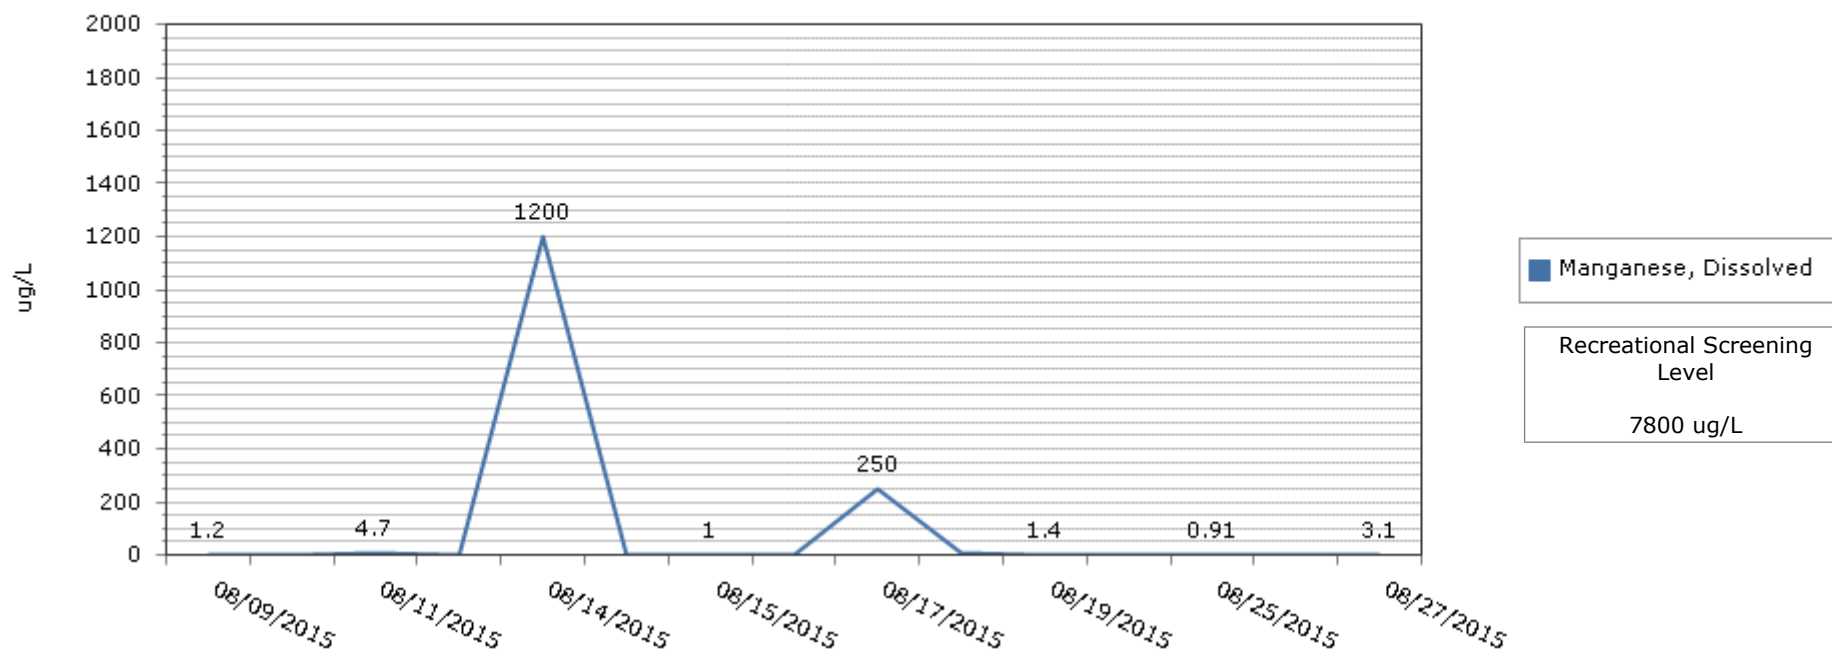

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Magnesium, Dissolved for location SJMH

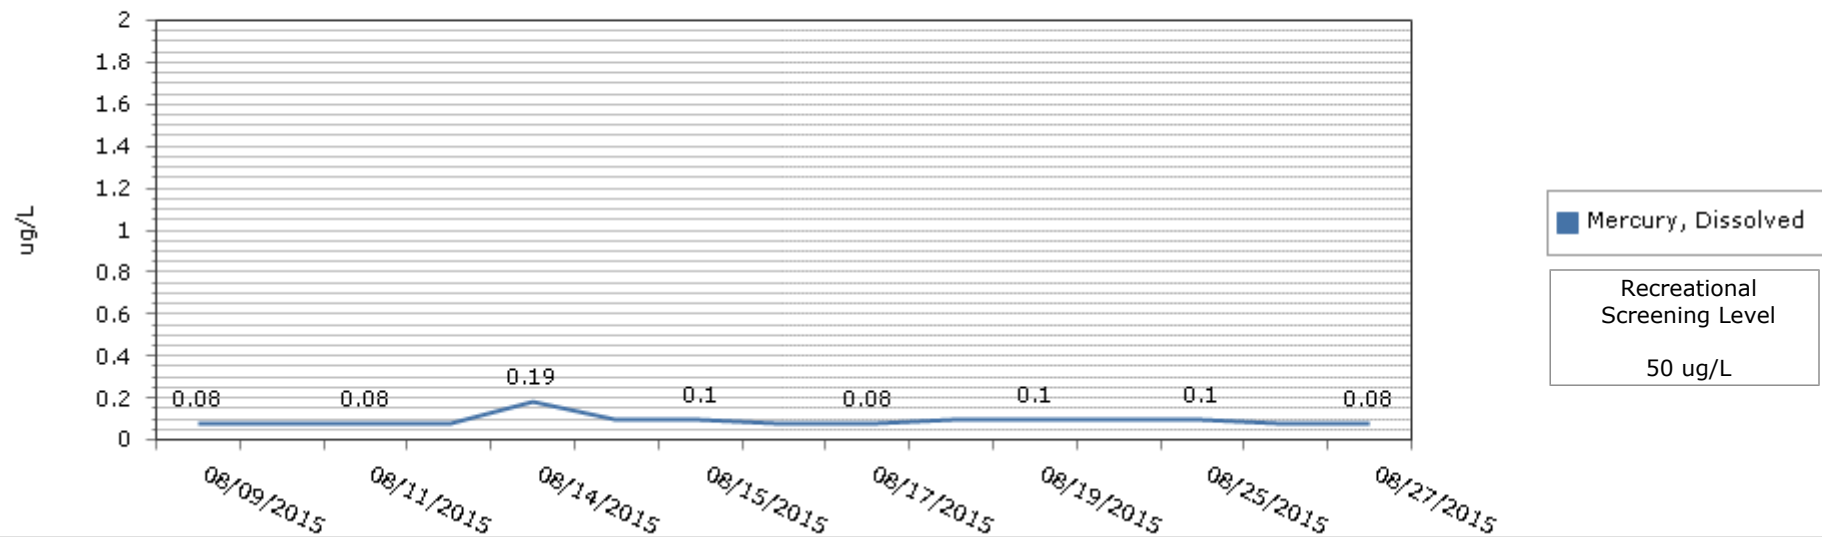

Manganese, Dissolved for location SJMH

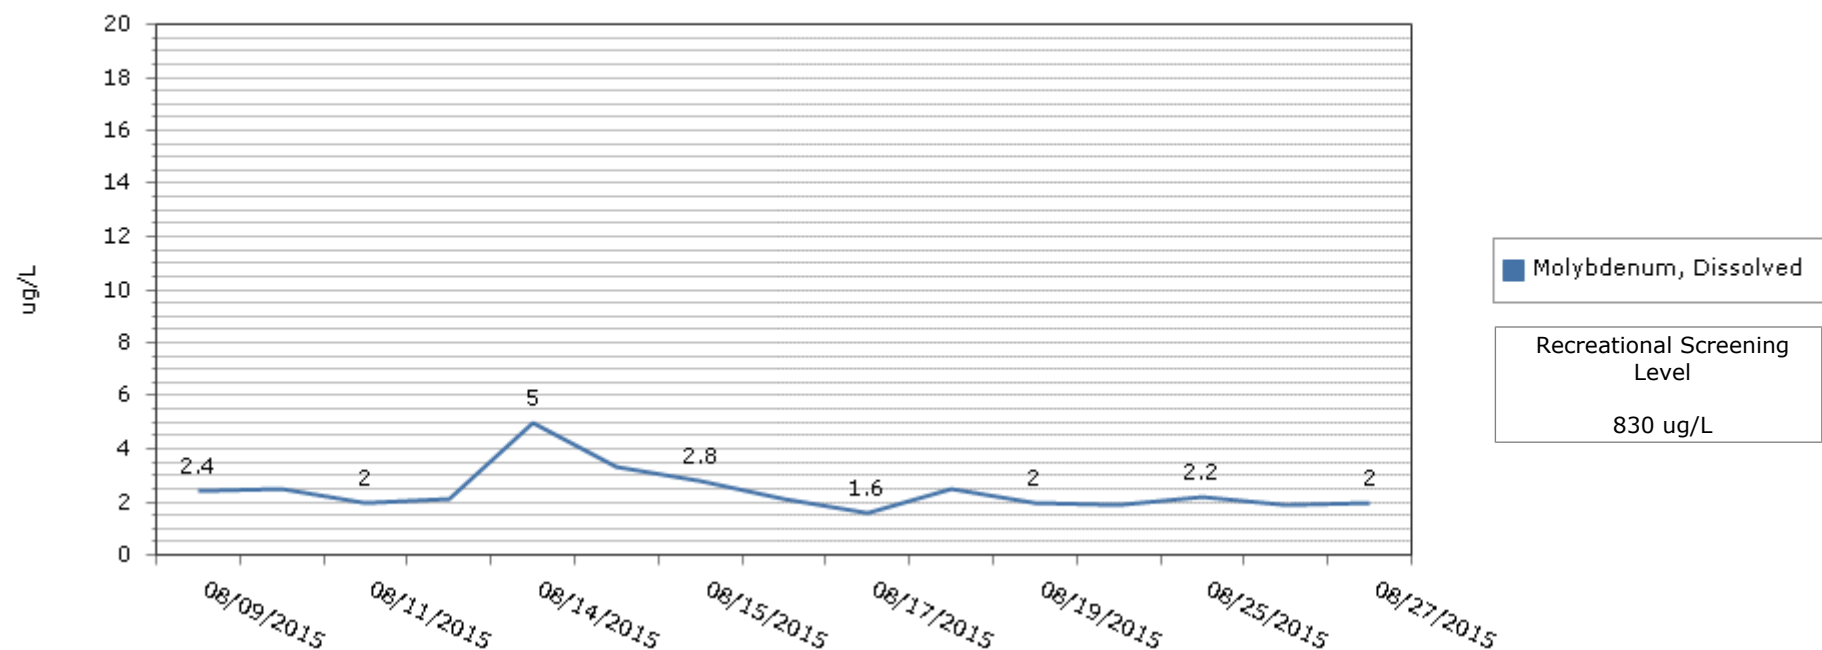

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Mercury, Dissolved for location SJMH

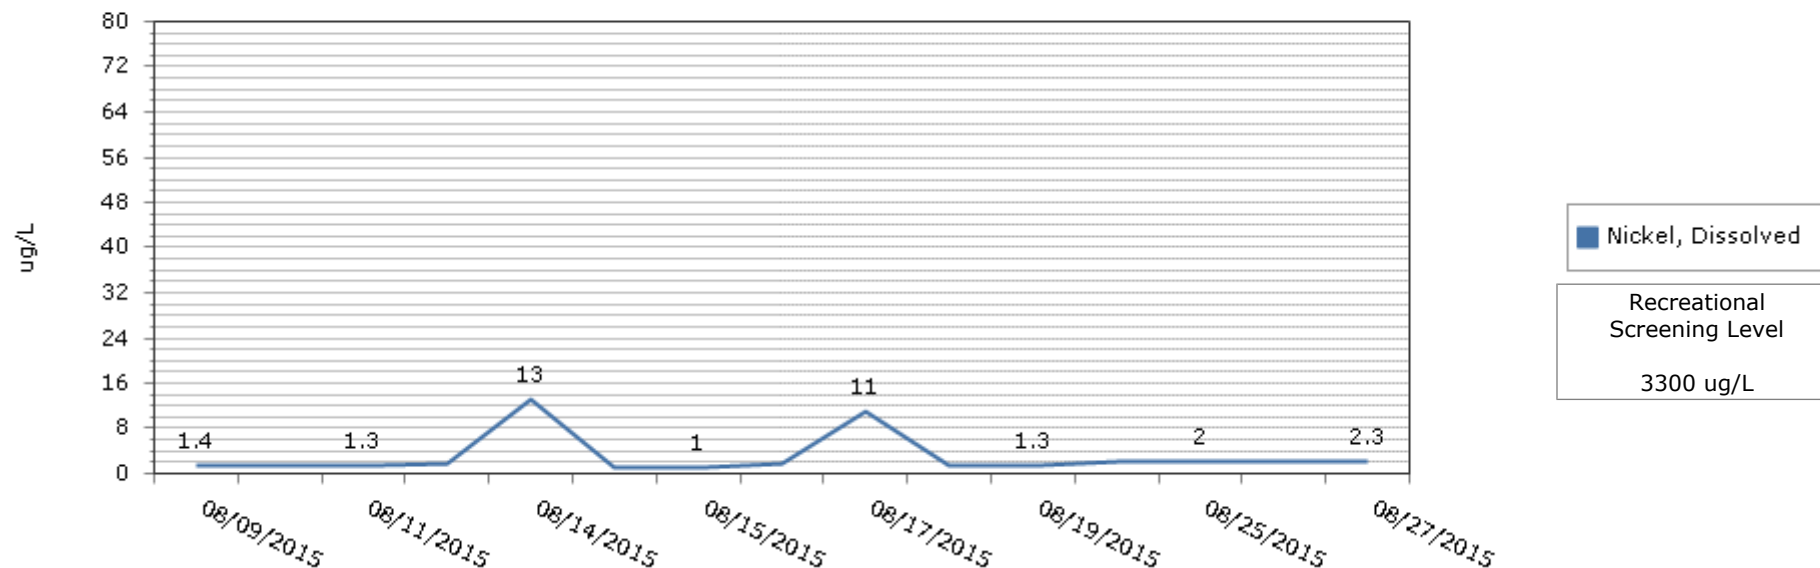

Molybdenum, Dissolved for location SJMH

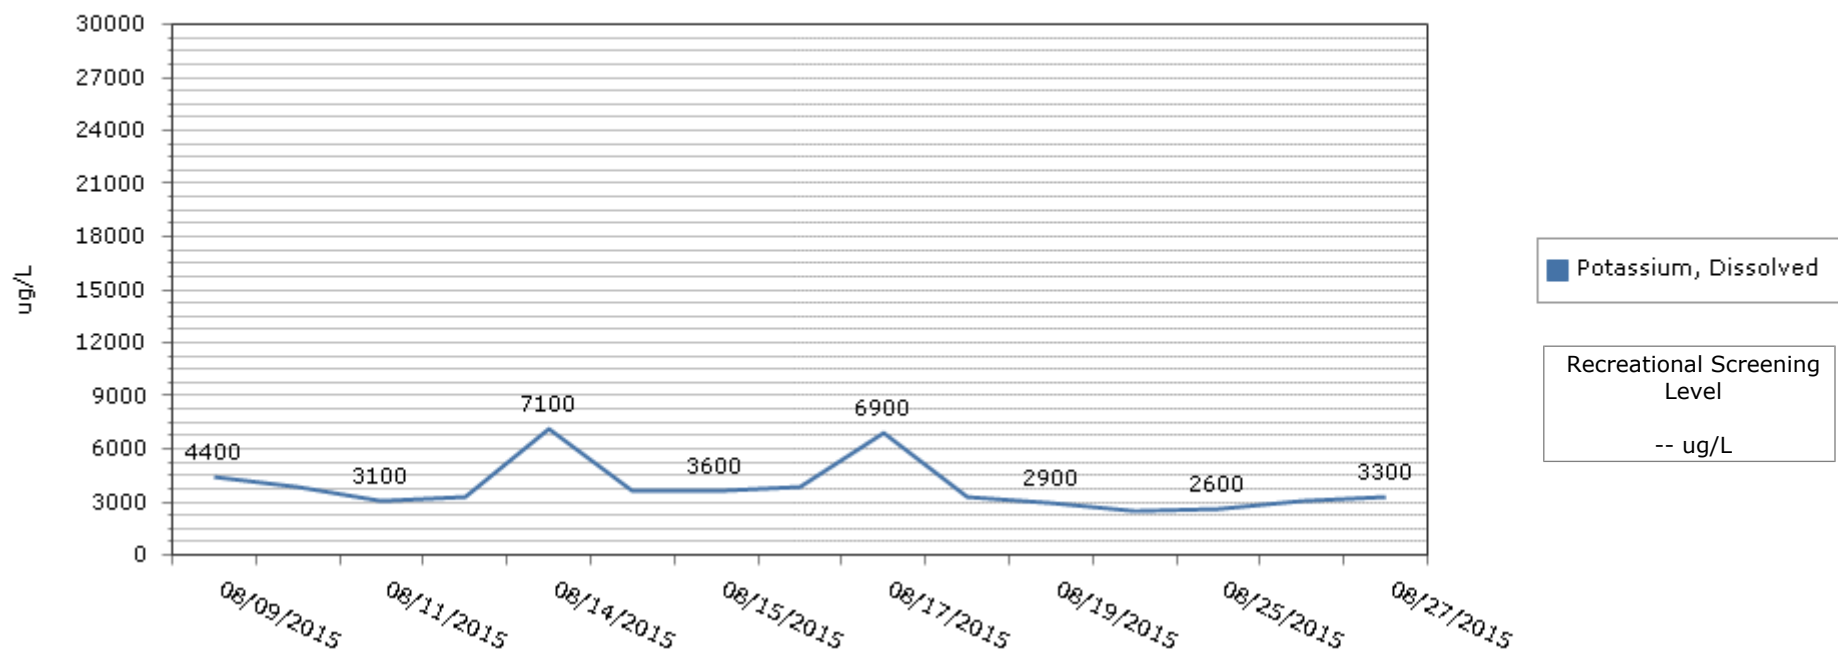

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Nickel, Dissolved for location SJMH

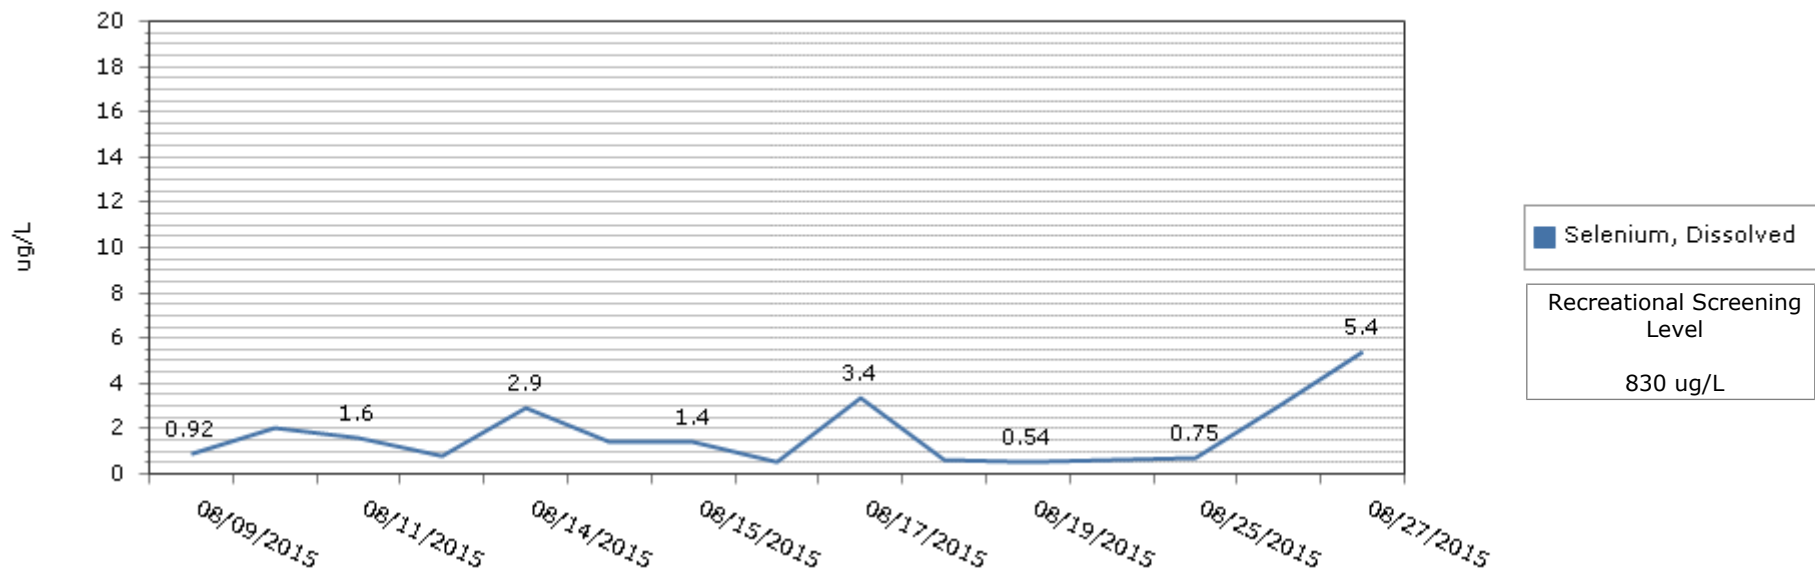

Potassium, Dissolved for location SJMH

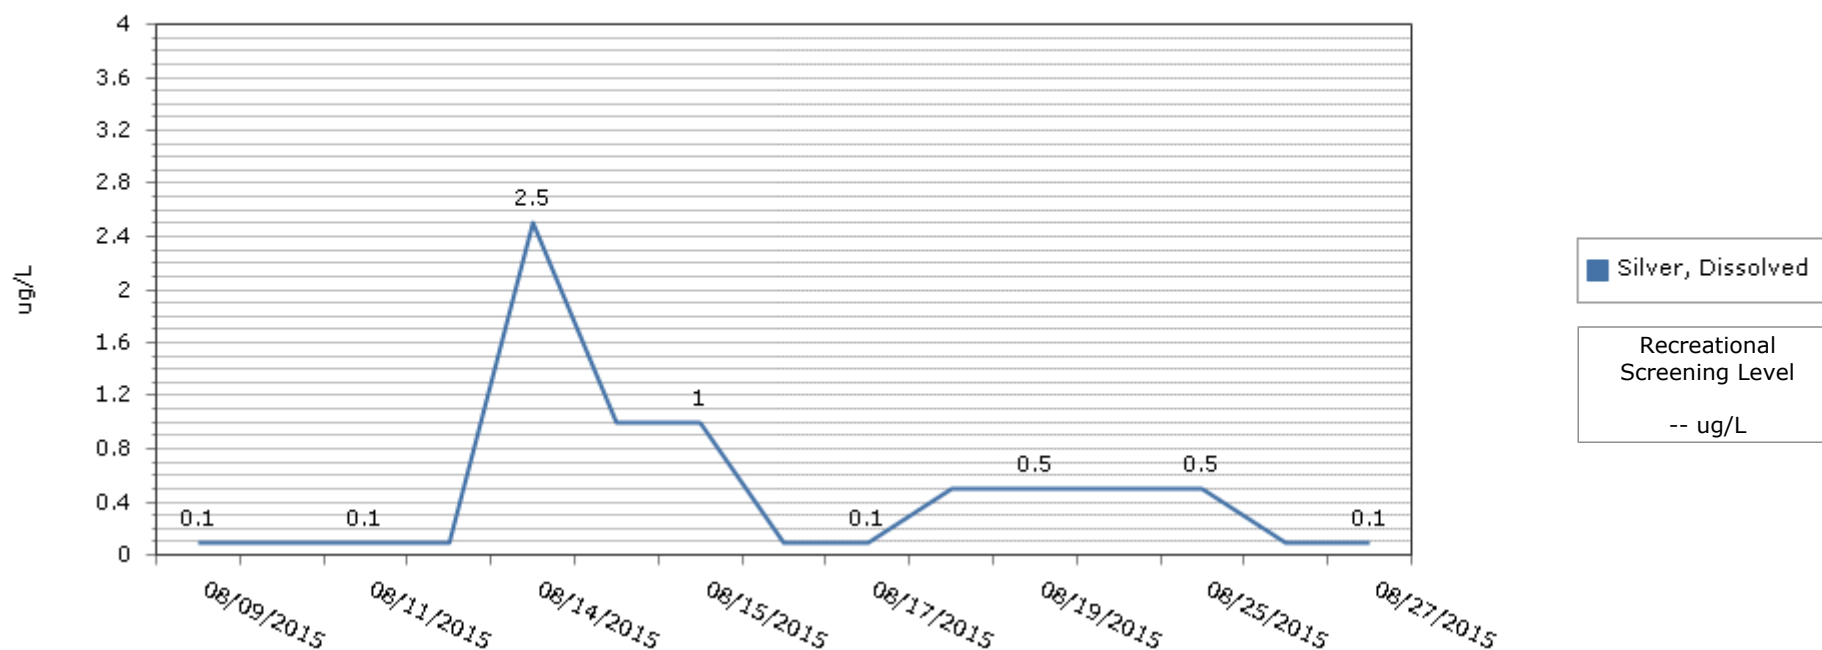

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Selenium, Dissolved for location SJMH

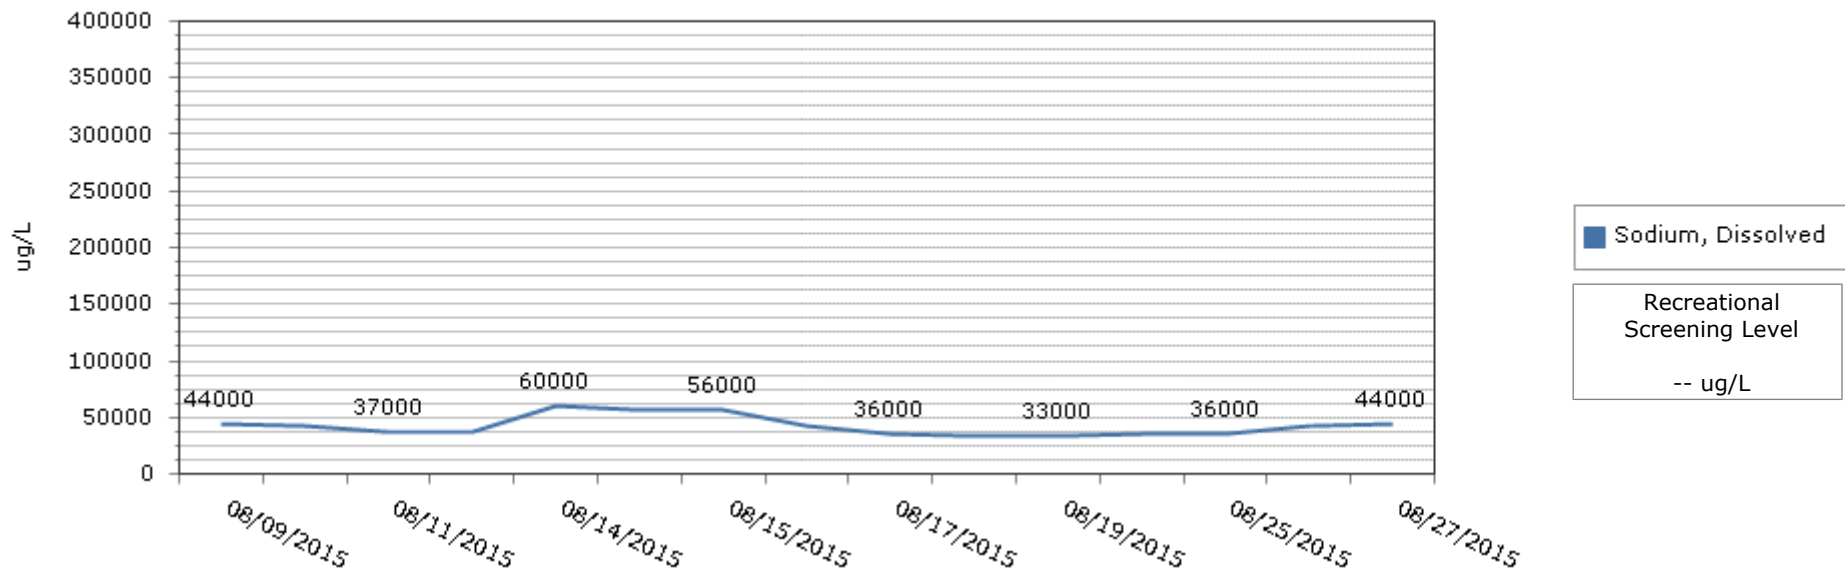

Silver, Dissolved for location SJMH

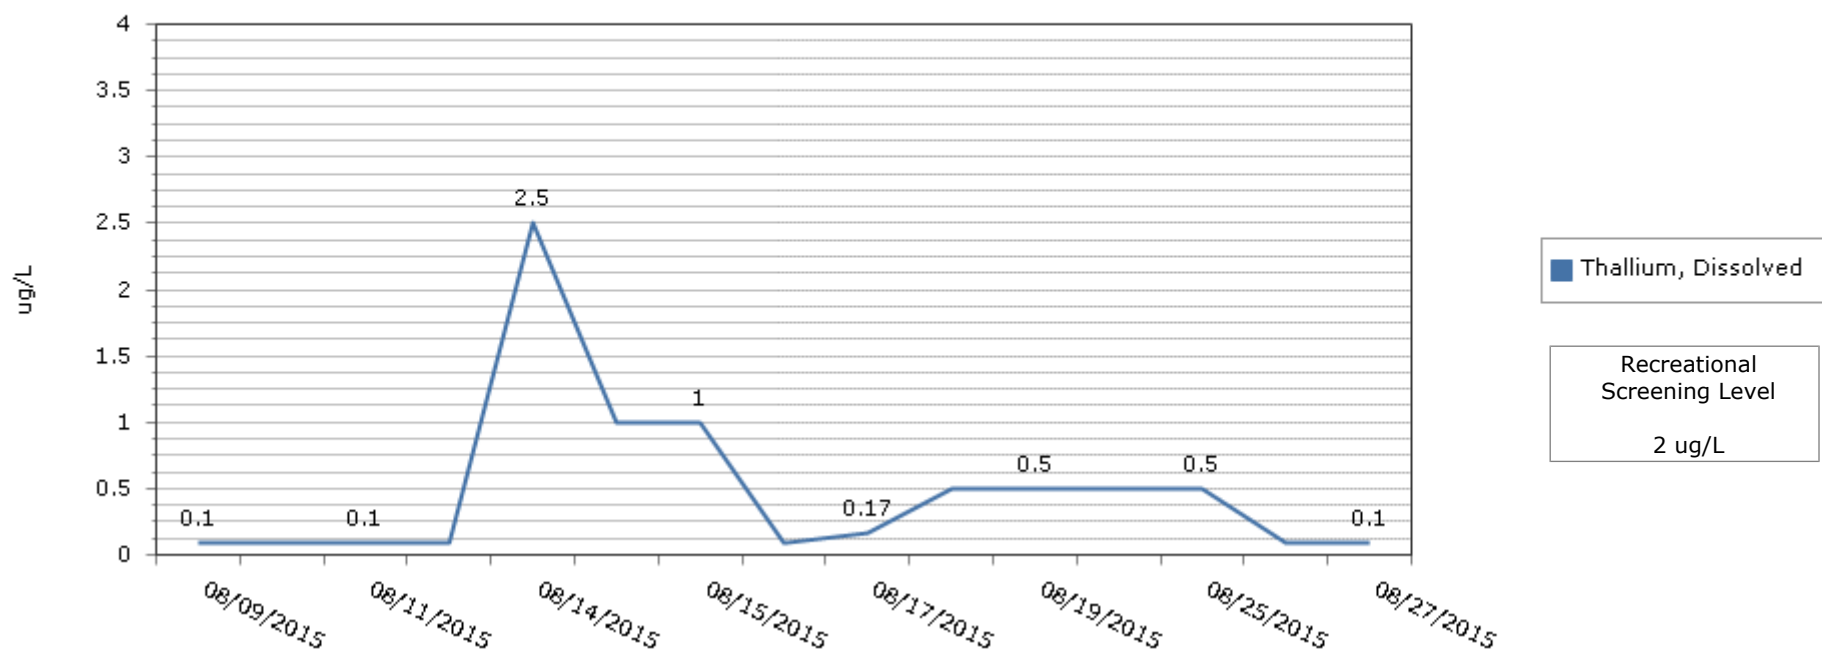

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Sodium, Dissolved for location SJMH

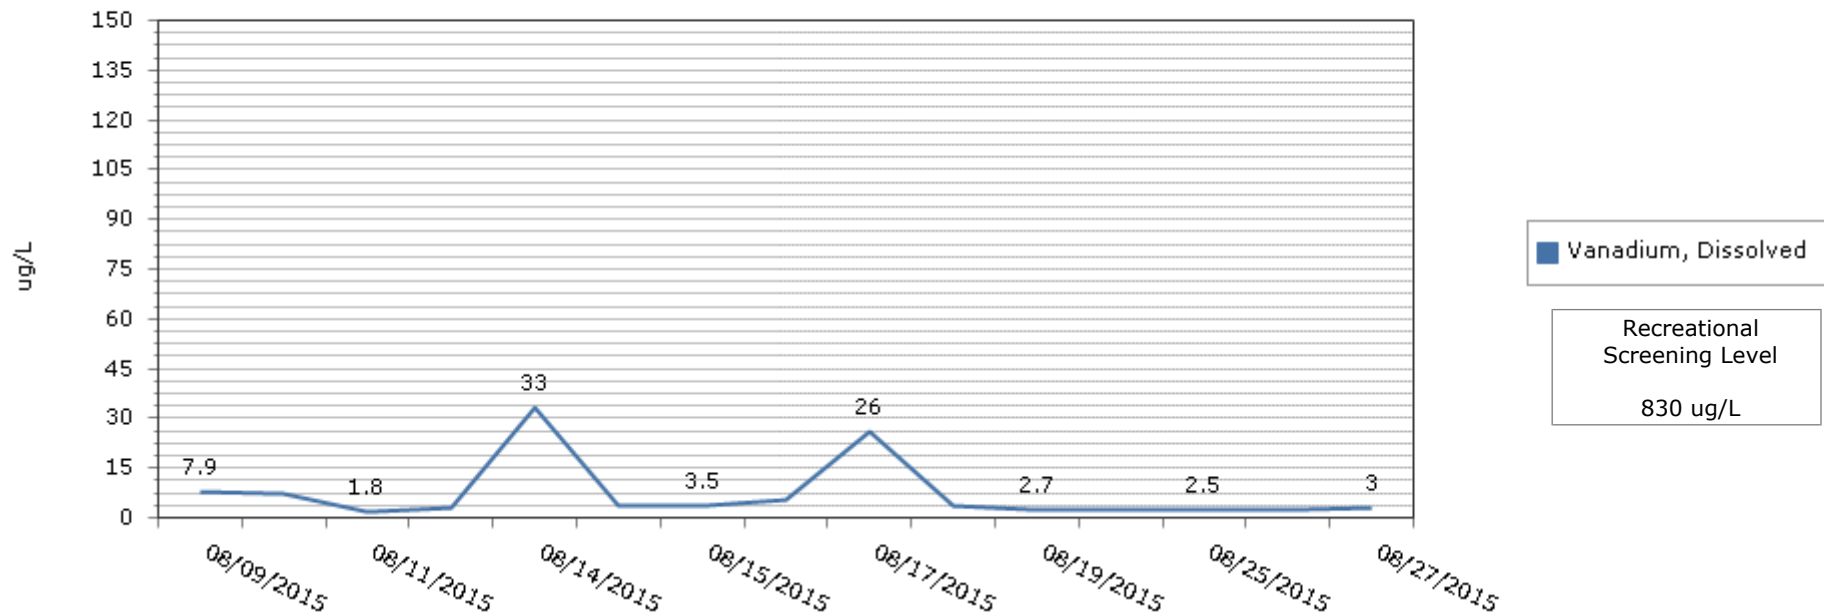

Thallium, Dissolved for location SJMH

For samples with metal concentrations that were too low to detect, EPA plotted the Method Detection Level (MDL) value onto the trend graph.

The trend graphs do not specify which values are MDLs. Please refer to the data tables to determine the exact values of the sample results.

Vanadium, Dissolved for location SJMH

Zinc, Dissolved for location SJMH
