[#] "Surface water treatment" includes violations of the Surface Water Treatment Rule and of the Interim Enhanced Surface Water Treatment Rule.

† Lead and copper represents the lead and copper rule, which is a set of standards and implementation measures.

‡ The standard for disinfectants and disinfection byproducts was first implemented in 2002.

NOTE: A new standard for disinfection byproducts was implemented beginning in 2002 for larger drinking water systems and 2004 for smaller systems.¹ Revisions to the standard for surface water treatment took effect in 2002.² A revised standard for radionuclides went into effect in 2003.³ A revised standard for arsenic went into effect in 2006.⁴ No other revisions to the standards have taken effect during the period of trend data.
