RE: May 2015 Sampling of Princeton Elementary School
1895 Winfield Road, Princeton, Louisiana

Dear Mr. Norwood,

The Environmental Protection Agency (EPA) conducted real-time air monitoring and collected soil and air samples from Princeton Elementary in May 2015. The monitoring and sampling was conducted to establish a baseline for soil and air prior to implementation of the removal operations at Camp Minden. Air monitoring was for carbon monoxide (CO), carbon dioxide (CO₂), nitrogen oxide (NO), nitrogen dioxide (NO₂), NOX, sulfur dioxide (SO₂), and fine particulates (2.5 micrometers [PM_{2.5}]). Soil samples were analyzed for dioxin/furans, semi-volatile organic compounds (SVOCs), pH, and volatile organic compounds (VOCs). The air samples were analyzed for dioxin/furans, SVOCs, particulates (PM₁₀ and PM_{2.5}), and volatile organic compounds (VOCs).

Maximum detections for air monitoring are summarized on Table 1 - Air Monitoring Summary, and the data collected during the monitoring period is presented as graphs. The analytical results for the soil samples are summarized on the attached Table 2 - Soil Analytical Results. The results for the air samples are summarized on Tables 3 and 4 - Air Analytical Results. The monitoring and sampling location is shown on the attached figure.

Thank you for your cooperation. Please contact me at 214-665-2779 (office), Adam.Adams@epa.gov (email), or the EPA toll free number 800-533-3508 if you have any questions.

Adam Adams
On-Scene Coordinator
Prevention and Response Branch

Air Monitoring Summary

**Camp Minden Baseline Event
Princeton Elementary School**

Start Time: 05-10-2015 10:01 - End Time: 05-12-2015 11:30

Below is a summary of Princeton Elementary School Air Monitoring Data collected at the location referenced above. The table contains a detailed listing of the following:

- 1 Total count of readings from May 10, 2015 10:01 through May 12, 2015 11:30
- 2 Average reading of each analyte from May 10, 2015 10:01 through May 12, 2015 11:30
- 3 Maximum reading of each analyte from May 10, 2015 10:01 through May 12, 2015 11:30

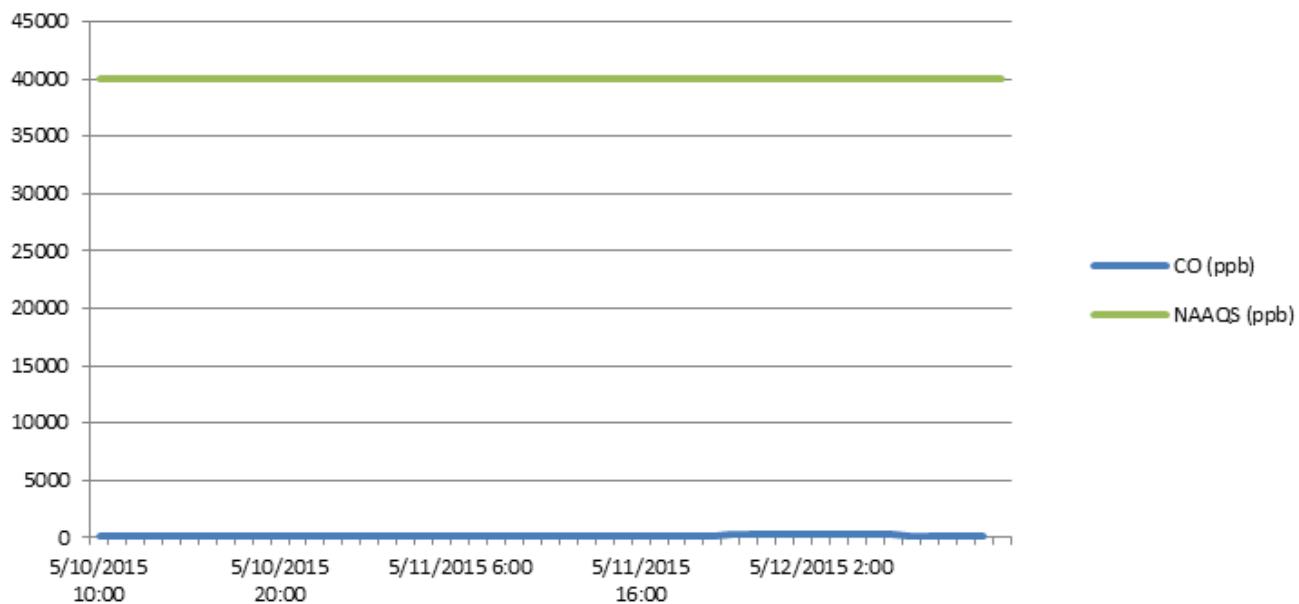

National Ambient Air Quality Standards (NAAQS) are listed with specific time frames and calculation formulas. Please visit NAAQS website for more in-depth information on how these are calculated - <http://www.epa.gov/air/criteria.html>.

** Note: PM2.5 was captured in 60-min averages. All other analytes were captured in 1-min averages.

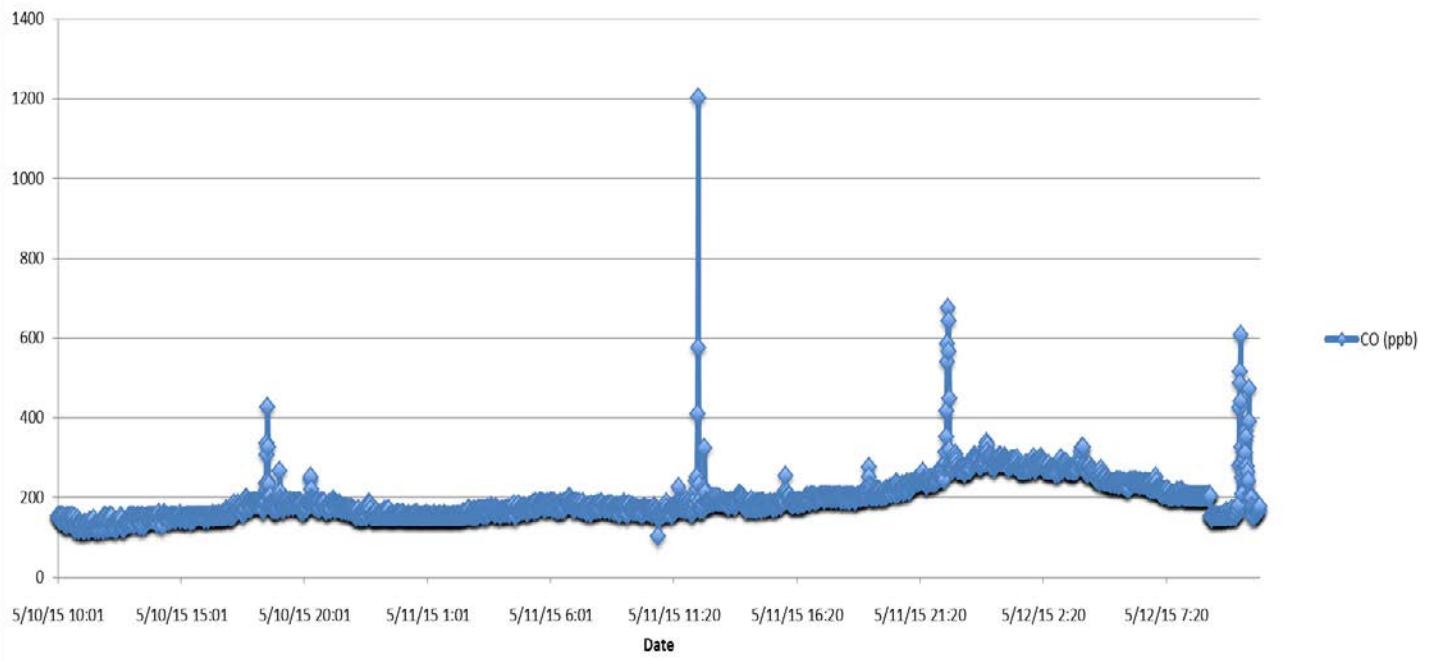

Summary of Location: Princeton Elementary School

Parameter	Count of 1-min Readings	Maximum Average Concentration	Maximum Detection	Units	NAAQS Standard
CO	2928	305	1202	ppb	40,000 (1-hour)
CO2	2951	507700	543700	ppb	
NO	2942	2.262	7.6	ppb	
NO2	2942	3.468	11.6	ppb	100 (1-hour)
NOX	2942	5.455	15.9	ppb	188 (1-hour)
SO2	2884	2.574	6.292	ppb	365 (3-hour)
Parameter	Count of 60-min Readings	Maximum Average Concentration	Maximum Detection	Units	NAAQS Standard
PM 2.5	46	18.48	30.4	ug/m3	35 (24-hour)

Vinyl Chloride	75-01-4	µg/m3	--	1.8 U	2.4 U

Notes:

µg/m3 - micrograms per cubic meter

Bolded values denote detections

FS - Field Sample

J - Estimated concentration, detected between the sample detection limit (SDL) and the practical quantitation limit (PQL).

U - Not detected above the indicated detection limit.

Toxicology Summary – Princeton Elementary

Soil Results

The EPA collected one soil sample from Princeton Elementary. The soil sample was analyzed for the presence of volatile organic chemicals (VOCs), semivolatile organic chemicals (SVOCs) and dioxin/furans. Analytical results were compared to the Regional Screening Level (RSL) and the Preliminary Remediation Goal (PRG) for residential and industrial soils. The results indicated that VOCs and SVOCs did not exceed the comparison levels for VOCs and SVOCs. The results indicated that dioxin (2,3,7,8-tetrachlorodibenzo-p-dioxin (2,3,7,8-TCDD) Toxicity Equivalence (TEQ)) did not exceed the noncarcinogenic screening level for residential and industrial soil, but did exceed the carcinogenic screening level for both residential and industrial soils. The noncancer RSL for 2,3,7,8-TCDD is a concentration of 50 ng/kg or parts per trillion (PPT) for residential land use and 720 ng/kg for industrial land use, and the carcinogenic RSL for 2,3,7,8-TCDD RSL is 4.9 ng/kg for residential land use and 22 ng/kg for industrial land use. The noncancer RSL for dioxin/furans in soil typically is used as the preliminary remediation goal (PRG) for Superfund site decisions.

PE 5/14/2015 FS

Princeton Elementary

8.46 ng/kg (TEQ ND=0.5)

In addition, these dioxin levels may be reflective of background values in the Camp Minden area. A comprehensive evaluation identified 18 studies with data on dioxin background levels in both rural and urban areas. The data from this evaluation found that TEQ concentrations in background rural soils ranged from 0.1 to 22.9 ng/kg, while mean rural TEQ concentrations ranged from 1.1 to 7.1 ng/kg and that the concentration in urban and suburban soils were substantially higher and more variable than those in rural soils, with TEQ concentrations ranging from 0.1 to 186.2 ng/kg. The range of the mean TEQ concentrations in urban/suburban soils was also substantially higher and range from 2.2 to 56.6 ng/kg” (Urban et al, 2013).

Air Monitoring/Sampling Data

The EPA did air monitoring and sampling at one location located at Princeton Elementary. Analytical result were compared to the National Ambient Air Quality Standards (NAAQS) air quality standards as well as the Regional Screening Level (RSL).

The 24-hour average PM2.5 level did exceed the RSL standard of 12 $\mu\text{g}/\text{m}^3$, however it did not exceed the 24-hour NAAQS standard of 35 $\mu\text{g}/\text{m}^3$.
