**What Is The Compliance Date?**
- **Existing Sources:** July 17, 2007.
- **New Sources:** Upon initial startup.

**What Are The Permitting Requirements?**
- This area source category is exempt from Title V.

**What Are The Impacts?**
- All existing sources currently operate wood preserving operations consistent with the requirements of the rule.
- The impacts associated with the rule are the cost associated with recordkeeping and reporting (initial notification) requirements, which is estimated to be $220 for each of the estimated 400 facilities.

**What Records Are Required?**
If you use a preservative containing chromium, arsenic, dioxins or methylene chloride, you must do the following:

**Reporting:**
- Initial Notification and Notification of Compliance Status (may be combined), due by 10/16/07.
- Initial Notification informs EPA that the facility is subject to the standards. Notification of Compliance Status provides certification of compliance with standards.
- You must report any deviation from the requirements of the rule within 30 days of the deviation.
- No ongoing compliance reports are required beyond Title V Requirements.

**Recordkeeping:**
- Records to include copies of notifications submitted to EPA and records of any corrective or preventive measures.
- Records to be maintained in a form suitable and readily available for expeditious review.

WOOD PRESERVING
(SUBPART QQQQQQ)

What Is An Area Source?
• Any source that is not a major source.
  (A major source is a facility that emits, or has
  the potential to emit in the absence of controls,
  at least 10 tons per year (TPY) of individual
  hazardous air pollutants (HAP) or 25 TPY of
  combined HAP.)

Who Does This Rule Apply to?
• Anyone that owns or operates a wood
  preserving operation that is an area source of
  HAP emissions.

What Am I Required To Do?
Equipment Requirements
• If you use a pressure treatment process with
  any wood preservative containing chromium,
  arsenic, dioxins, or methylene chloride, the
  preservative must be applied to the wood
  product inside a retort or similarly enclosed
  vessel.
• If you use a thermal treatment process with
  any wood preservative containing chromium,
  arsenic, dioxins, or methylene chloride, the
  preservative must be applied using process
  treatment tanks equipped with an air
  scavenging system to control emissions.
• Prepare a management practice plan and
  operate your treatment process according to
  that plan to minimize air emissions.

The management practice plan must include,
but is not limited to, the following activities:
1. Minimize preservative usage;
2. Maintain records on the type of treatment
   process and types and amounts of wood
   preservatives used at the facility;
3. For the pressure treatment process, maintain
   charge records identifying pressure reading(s)
   inside the retorts (or similarly enclosed vessel);
4. For the thermal treatment process, maintain
   records that the air scavenging system is
   in place and operated properly during the
   treatment process;
5. Store treated wood product on drip pads or
   in a primary containment area to convey
   preservative drippage to a collection system
   until drippage has ceased;
6. For the pressure treatment process, fully
   drain the retort to the extent practicable, pri-
   or to opening the retort door;
7. Promptly collect any spills; and
8. Perform relevant corrective actions or
   preventative measures in the event of a
   malfunction before resuming operations.

Monitoring Requirements
• There are no monitoring requirements for
  this rule.
