#### DOCUMENTATION OF ENVIRONMENTAL INDICATOR DETERMINATION

September 7, 2007

# RCRA Corrective Action Environmental Indicator (EI) RCRIS code (CA725)

#### **Current Human Exposures Under Control**

Facility Name:	AMO Pollution Services
Facility Address:	RD#2 Box 311B, (off Baker Road) Canonsburg, PA 15317
Facility EPA ID #:	PAD038966230
groundwater, su	e relevant/significant information on known and reasonably suspected releases to soil, rface water/sediments, and air, subject to RCRA Corrective Action (e.g., from Solid Waste nits (SWMU), Regulated Units (RU), and Areas of Concern (AOC)), been <b>considered</b> in this EI
X	If yes - check here and continue with #2 below.
	If no – re-evaluate existing data, or
	if data are not available skip to #6 and enter "IN" (more information needed) status code
BACKGROUND	

# **Definition of Environmental Indicators (for the RCRA Corrective Action)**

Environmental Indicators (EI) are measures being used by the RCRA Corrective Action program to go beyond programmatic activity measures (e.g., reports received and approved, etc.) to track changes in the quality of the environment. The two EI developed to-date indicate the quality of the environment in relation to current human exposures to contamination and the migration of contaminated groundwater. An EI for non-human (ecological) receptors is intended to be developed in the future.

#### **Definition of "Current Human Exposures Under Controls" EI**

A positive "Current Human Exposures Under Control" EI determination ("YE" status code) indicates that there are no "unacceptable" human exposures to "contamination" (i.e., contaminants in concentrations in excess of appropriate risk-based levels) that can be reasonably expected under current land- and groundwater-use conditions (for all "contamination" subject to RCRA corrective action at or from the identified facility (i.e., site-wide)).

#### **Relationship of EI to Final Remedies**

While Final remedies remain the long-term objective of the RCRA Corrective Action program, the EI are near-term objectives which are currently being used as Program measures for the Government Performance and Results Act of 1993 (GPRA). The "Current Human Exposures Under Control" EI are for reasonably expected human exposures under current land- and groundwater-use conditions ONLY, and do not consider potential future land- or groundwater-use conditions or ecological receptors. The RCRA Corrective Action program's overall mission to protect human health and the environment requires that Final remedies address these issues (i.e., potential future human exposure scenarios, future land and groundwater uses, and ecological receptors).

## **Duration / Applicability of EI Determinations**

EI Determinations status codes should remain in RCRIS national database ONLY as long as they remain true (i.e., RCRIS status codes must be changed when the regulatory authorities become aware of contrary information).

Page 2

2.	Are groundwater, soil, surface water, sediments, or air media known or reasonably suspected to be "contaminated" above appropriately protective risk-based "levels" (applicable promulgated standards, as well as						
		uidelines, gu			rom releases subject to RCRA Corrective Action		
		Yes	<u>No</u>	<u>?</u>	Rationale/Key Contaminants		
	Groundwater		X				
	Air (indoors) <sup>2</sup>		X				
	Surface Soil (e.g., <2 ft)		X				
	Surface Water		X				
	Sediment		X				
	Subsurface Soil (e.g., >2 ft)		X				
	Air (outdoors)		<u>X</u>				
X	If no (for all media) – skip to #6, and enter "YE," status code after providing or citing appropriate "levels," and referencing sufficient support documentation demonstrating that these "levels" are not exceeded.						
	If yes (for any media) – continue after identifying key contaminants in each "contaminated" medium, citing appropriate "levels" (or provide an explanation for the determination that the medium could pose an unacceptable risk), and referencing supporting documentation.						
	If unknown (for any media) – skip to #6 and enter "IN" status code.						
D							

AMO operated a hazardous waste container storage facility under RCRA interim status. AMO withdrew its Part B permit application. Interim status was terminated in 1988. Facility clean closed its storage facility in 1990. Additional clean-up activities of adjacent areas and buildings were completed by the property owner (Benson) in 1992. DEP inspected the facility throughout these phases of clean-up activities and determined that all waste and contaminated soil was removed. A DEP inspection on August 1, 2007 confirmed that there are no remaining concerns. This facility is now used as a sports training center. Note that on August 25, 1987, EPA Region 3 determined that the AMO facility did not need a RCRA corrective action permit.

<sup>&</sup>lt;sup>1</sup> "Contamination" and "contaminated" describes media containing contaminants (in any form, NAPL and/or dissolved, vapors, or solids, that are subject to RCRA) in concentrations in excess of appropriately protective risk-based "levels" (for the media, that identify risks within the acceptable risk range).

<sup>&</sup>lt;sup>2</sup> Recent evidence (from the Colorado Dept. of Public Health and Environment, and others) suggest that unacceptable indoor air concentrations are more common in structures above groundwater with volatile contaminants than previously believed. This is a rapidly developing field and reviewers are encouraged to look to the latest guidance for the appropriate methods and scale of demonstration necessary to be reasonably certain that indoor air (in structures located above (and adjacent to) groundwater with volatile contaminants) does not present unacceptable risks.

Page 3

3. Are there complete pathways between "contamination" and human receptors such that exposures can be reasonably expected under the current (land- and groundwater-use) conditions?

Summary Exposure Pathway Evaluation Table

### Potential **Human Receptors** (Under Current Conditions)

"Contaminated Media"	Residents	Workers	<u>Day-Care</u>	Construction	Trespassers	Recreation	Food <sup>3</sup>
Groundwater	<u>NA</u>	<u>NA</u>	<u>NA</u>	NA	<u>NA</u>	<u>NA</u>	<u>NA</u>
Air (indoors)	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>
Soil (surface, e.g., <2 ft)	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>
Surface Water	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>
Sediment	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>
Soil (subsurface e.g., >2 for	t) <u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>
Air (outdoors)	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>	<u>NA</u>

Instructions for **Summary Exposure Pathway Evaluation Table**:

- 1. Strike-out specific Media including Human Receptors -- spaces for Media which are not "contaminated" as identified in #2 above.
- 2. Enter "yes" or "no" for potential "completeness" under each "Contaminated" Media Human Receptor combination (Pathway).

Note: In order to focus the evaluation to the most probable combinations, some potential "Contaminated" Media – Human Receptor combinations (Pathways) do not have check spaces ("\_\_\_\_\_"). While these combinations may not be probable in most situations, they may be possible in some settings and should be added as necessary.

	If no (pathways are not complete for any contaminated media –receptor combination) – skip to #6, and enter "YE" status code, after explaining and/or referencing condition(s) in-place, whether natural or man-made, preventing a complete exposure pathway from each contaminated medium (e.g., use optional Pathway Evaluation Work Sheet) to analyze major pathways.
	If yes (pathways are complete for any "Contaminated" Media – Human Receptor combination) – continue after providing supporting explanation
	If unknown (for any "Contaminated" Media – Human Receptor combination) – skip to #6 and enter "IN" status code.
Rationale and Reference(s):	

\_

 $<sup>^3</sup>$  Indirect Pathway/Receptor (e.g., vegetables, fruits, crops, meat and dairy products, fish, shellfish, etc.)

Page 4

4.	Can the <b>exposures</b> from any of the complete pathways identified in #3 be reasonably expected to be <b>"significant"</b> (i.e., potentially "unacceptable" levels) because exposures can be reasonably expected to be: 1) greater in magnitude (intensity, frequency and/or duration) than assumed in the derivation of the acceptable "levels" (used to identify the "contamination"); or 2) the combination of exposure magnitude (perhaps even though low) and contaminant concentrations (which may be substantially above the acceptable "levels") could result in greater than acceptable risks)?				
	"u afı of	no (exposures (can not be reasonably expected to be significant (i.e., potentially nacceptable") for any complete exposure pathway) – skip to #6 and enter "YE" status code ter explaining and/or referencing documentation justifying why the exposures (from each the complete pathways) to "contamination" (identified in #3) are not expected to be ignificant."			
	"u (o: do	yes (exposures could be reasonably expected to be "significant" (i.e., potentially nacceptable") for any complete exposure pathway) – continue after providing a description f each potentially "unacceptable" exposure pathway) and explaining and/or referencing cumentation justifying why the exposures (from each of the remaining complete thways) to "contamination" (identified in #3) are not expected to be "significant."			
	If	unknown (for any complete pathway) – skip to #6 and enter "IN" status code.			
Rationa	ale and Reference(s	):			

<sup>&</sup>lt;sup>4</sup> If there is any question on whether the identified exposures are "significant' (i.e., potentially "unacceptable") consult a Human Health Risk Assessment specialist with appropriate education, training and experience.

5.	Can the "significant" <b>exposures</b> (identified in #4) be shown to be within <b>acceptable</b> limits?					
		If yes (all "significant" exposures have been shown to be within acceptable limits) — continue and enter a "YE" after summarizing <u>and referencing documentation justifying why all "significant" exposures to "contamination" are within acceptable limits (e.g., a site-specific Human Health Risk Assessment).</u>				
		If no (there are current exposures that can be reasonably expected to be "unacceptable") – continue and enter a "NO" status code after providing a description of each potentially "unacceptable" exposure.				
		If unknown (for any potentially "unacceptable" exposure) – continue and enter "IN" status code.				
Rations	ale and Reference	:(s)·				

Page 6

6. Check the appropriate RCRIS status codes for the Current Human Exposures Under Control EI event code (CA725), and obtain Supervisor (or appropriate Manager) signature and date on the EI determination below (and attach appropriate supporting documentation as well as a map of the facility):

YE	information "Under Control Con	on contained in this EI Determination, "Current Hubontrol" at AMO Pollution Services facility, EPA Internation, PA 15317 under current and reasonably evaluated when the Agency/State becomes aware	uman Exposu D PAD 038 9 expected cor	ares" are expected to be 266 230 located at <u>RD#2 Box</u> uditions. This determination
	NO – "Cu	rrent Human Exposures" are NOT "Under Contro	1."	
	IN - Mo	ore information is needed to make a determination	1.
