#### DOCUMENTATION OF ENVIRONMENTAL INDICATOR DETERMINATION

Interim Final 2/5/99

#### **RCRA Corrective Action**

## Environmental Indicator (EI) RCRIS code (CA725) Current Human Exposures Under Control

Facility Name:		Watson Standard					
Facility EPA ID #: PAD 000651786  1. Has all available relevant/significant information surface water/sediments, and air, subject to RCI [SWMU], Regulated Units [RU], and Areas of		Grand Avenue and Old Neville Road, Pittsburgh, PA 15225 PAD 000651786					
		X If yes – check here and continue with #2 below.					
				If no – re-evaluate existing data, or			
		If data are not available skip to #6 and enter "IN" (more information needed) status code.					

### **BACKGROUND**

## **Definition of Environmental Indicators (for the RCRA Corrective Action)**

Environmental Indicators (EI) are measures being used by the RCRA Corrective Action program to go beyond programmatic activity measures (e.g., reports received and approved, etc.) to track changes in the quality of the environment. The two EI developed to-date indicate the quality of the environment in relation to current human exposures to contamination and the migration of contaminated groundwater. An EI for non-human (ecological) receptors is intended to be developed in the future.

# **Definition of "Current Human Exposures Under Control" EI**

A positive "Current Human Exposures Under Control" EI determination ("YE" status code) indicates that there are no "unacceptable" human exposures to "contamination" (i.e., contaminants in concentrations in excess of appropriate risk-based levels) that can be reasonably expected under current land- and groundwater-use conditions (for all "contamination" subject to RCRA corrective action at or from the identified facility [i.e., site-wide]).

## **Relationship of EI to Final Remedies**

While Final remedies remain the long-term objective of the RCRA Corrective Action program the EI are near-term objectives which are currently being used as Program measures for the Government Performance and Results Act of 1993, GPRA). The "Current Human Exposures Under Control" EI are for reasonably expected human exposures under current land- and groundwater-use conditions ONLY, and do not consider potential future land- or groundwater-use conditions or ecological receptors. The RCRA Corrective Action program's overall mission to protect human health and the environment requires that Final remedies address these issues (i.e., potential future human exposure scenarios, future land and groundwater uses, and ecological receptors).

## **Duration / Applicability of EI Determinations**

EI Determinations status codes should remain in RCRIS national database ONLY as long as they remain true (i.e., RCRIS status codes must be changed when the regulatory authorities become aware of contrary information).

## Current Human Exposures Under Control Environmental Indicator (EI) RCRIS code (CA725)

Page 2

2. Are groundwater, soil, surface water, sediments, or air **media** known or reasonably suspected to be "**contaminated**" above appropriately protective risk-based "levels" (applicable promulgated standards, as well as other appropriate standards, guidelines, guidance, or criteria) from releases subject to RCRA Corrective Action (from SWMUs, RUs or AOCs)?

	Yes	No	?	Rationale/Key Contaminants		
Groundwater		X		No record of contamination.		
Air (indoors) <sup>2</sup>		X		No record of contamination.		
Surface Soil (e.g	, <2 ft)	X		No record of contamination.		
Surface Water		<u>X</u>		No record of contamination.		
Sediment		<u>X</u>		No record of contamination.		
Subsurf. Soil (e.g., >2 ft)		X	No record of contamination.			
Air (outdoors)		X		No record of contamination.		
If no (for all media) - skip to #6, and enter "YE," status code after providing or citing appropriate "levels," and referencing sufficient supporting documentation demonstrating that these "levels" are exceeded.						
	If yes (for any media) - continue after identifying key contaminants in each "contaminated" medium, citing appropriate "levels" (or provide an explanation for the determination that the medium could pound an unacceptable risk), and referencing supporting documentation.					
]	If unknown (for any media) - skip to #6 and enter "IN" status code.					

### **Rationale and Reference(s):**

Groundwater, Air (indoor and outdoor), Surface Soil, Surface Water, Sediment, and Subsurface Soil:

There are no records of suspected releases that are above protective risk-based "levels" by the facility. (EI Inspection Report, August 2006)

### **Special Note:**

All product and chemical tanks are inside the main building. Therefore, any potential releases should be contained within the confines of the building and handled under their SPCC plan.

<sup>&</sup>lt;sup>1</sup> "Contamination" and "contaminated" describes media containing contaminants (in any form, NAPL and/or dissolved, vapors, or solids, that are subject to RCRA) in concentrations in excess of appropriately protective risk-based "levels" (for the media, that identify risks within the acceptable risk range).

<sup>&</sup>lt;sup>2</sup> Recent evidence (from the Colorado Dept. of Public Health and Environment, and others) suggest that unacceptable indoor air concentrations are more common in structures above groundwater with volatile contaminants than previously believed. This is a rapidly developing field and reviewers are encouraged to look to the latest guidance for the appropriate methods and scale of demonstration necessary to be reasonably certain that indoor air (in structures located above (and adjacent to) groundwater with volatile contaminants) does not present unacceptable risks.

# Current Human Exposures Under Control Environmental Indicator (EI) RCRIS code (CA725) Page 3

3. Are there **complete pathways** between "contamination" and human receptors such that exposures can be reasonably expected under the current (land- and groundwater-use) conditions?

Summary Exposure Pathway Evaluation Table

				Potential <u>Hu</u>	ıman Receptors	(Under Current C	Conditions)
Contaminated Media	Residents	Workers	Day-Care	Construction	Trespassers	Recreation	Food <sup>3</sup>
Groundwater							
Air (indoors)							
Soil (surface, e.g., <2 ft. Surface Water							
Sediment							
Soil (subsurface e.g., >2 ft.							
Air (outdoors)

<sup>3</sup> Indirect Pathway/Receptor (e.g., vegetables, fruits, crops, meat and dairy products, fish, shellfish, etc.

## Current Human Exposures Under Control Environmental Indicator (EI) RCRIS code (CA725) Page 4

4.	Can the <b>exposures</b> from any of the complete pathways identified in #3 be reasonably expected to be " <b>significant</b> " (i.e., potentially "unacceptable" because exposures can be reasonably expected to be: 1) greater in magnitude (intensity, frequency and/or duration) than assumed in the derivation of the acceptable "levels" (used to identify the "contamination"); or 2) the combination of exposure magnitude (perhaps even though low) and contaminant concentrations (which may be substantially above the acceptable "levels") could result in greater than acceptable risks)?					
	If no (exposures can not be reasonably expected to be significant (i.e., potentially "unacceptable") for any complete exposure pathway) - skip to #6 and enter "YE" status code after explaining and/or referencing documentation justifying why the exposures (from each of the complete pathways) to "contamination" (identified in #3) are not expected to be "significant."					
	If yes (exposures could be reasonably expected to be "significant" (i.e., potentially "unacceptable") for any complete exposure pathway) - continue after providing a description (of each potentially "unacceptable" exposure pathway) and explaining and/or referencing documentation justifying why the exposures (from each of the remaining complete pathways) to "contamination" (identified in #3) are not expected to be "significant."					
	If unknown (for any complete pathway) - skip to #6 and enter "IN" status code					

**Rationale and Reference(s):** 

<sup>4</sup> If there is any question on whether the identified exposures are "significant" (i.e., potentially "unacceptable") consult a human health Risk Assessment specialist with appropriate education, training and experience.

# Current Human Exposures Under Control Environmental Indicator (EI) RCRIS code (CA725) Page 5

5.	Can the "significant" <b>exposures</b> (identified in #4) be shown to be within <b>acceptable</b> limits?					
	If yes (all "significant" exposures have been shown to be within acceptable limits) - continue and enter "YE" after summarizing <u>and</u> referencing documentation justifying why all "significant" exposures to "contamination" are within acceptable limits (e.g., a site-specific Human Health Risk Assessment).					
	If no (there are current exposures that can be reasonably expected to be "unacceptable")- continue and enter "NO" status code after providing a description of each potentially "unacceptable" exposure.					
	If unknown (for any potentially "unacceptable" exposure) - continue and enter "IN" status code
