## EXECUTIVE SUMMARY

This report provides an analysis of the physical and chemical characteristics of the sediments at three alternative dredged material disposal sites in eastern Long Island Sound. The assessment is part of the Supplemental Environmental Impact Statement (SEIS) process for the designation of dredged material disposal sites in the eastern Long Island Sound region. The SEIS will supplement the Environmental Impact Statement (EIS) for the designation of dredged material disposal sites in the Western and Central Long Island Sound, completed in 2004. The SEIS is prepared by the U.S. Environmental Protection Agency (USEPA), and supported by the Connecticut Department of Transportation (CTDOT).

Sediment samples were collected within and around three alternative sites that were selected for more detailed analysis in the SEIS. These sites were New London, consisting of the active New London Disposal Site (NLDS) and two areas to the west; Niantic Bay, consisting of the historically used Niantic Bay Disposal Site (NBDS) and an area to the east; and Cornfield Shoals, consisting of the active Cornfield Shoals Disposal Site (CSDS). Sediment samples were collected at a total of 35 stations in February 2015. Samples were analyzed for physical and chemical properties, consisting of grain size, total organic carbon, metals, polycyclic aromatic hydrocarbon (PAHs), pesticides, and polychlorinated biphenyls (PCBs).

The predominant mean grain size throughout all three alternative sites was medium to fine sand. Grain sizes at individual stations were more variable at the NLDS, reflecting the disposal of dredged material from various sources. The TOC content was below 1% in most samples from the three Alternatives, with generally higher concentrations at the NLDS.

Metal concentrations analyzed at the three Alternatives were generally low. None of the metal concentrations at any of the 35 stations exceeded the NOAA “Effects Range Median” (ERM)<sup>1</sup> guideline values for any of the analyzed metals. Samples from two stations slightly exceeded the NOAA “Effects Range Low” (ERL)<sup>2</sup> guideline value for copper; these two stations were located in the NLDS.

Concentrations of organic compounds (PAHs, pesticides, PCBs) were low or often not detected. None of the individual samples were above the ERM values for any organic compound. Two samples located at the NLDS exceeded ERL values for some compounds. One station was above the ERL value for multiple PAHs and the sum of the pesticides DDD+DDE+DDT. Another station was above the ERL value for DDT and total PCBs.

---

<sup>1</sup> The ERM is indicative of concentrations above which adverse biological effects frequently occur.

<sup>2</sup> The ERL is indicative of concentrations below which adverse biological effects rarely occur.

## 1.0 INTRODUCTION

In 2005, the USEPA designated the western and central Long Island Sound dredged material disposal sites, following the preparation of an EIS (USEPA and USACE, 2004a). The two disposal sites in eastern Long Island Sound, Cornfield Shoals and New London, are scheduled to close in December 2016. The USEPA is in the process of preparing a Supplemental EIS (SEIS) for the potential designation of one or more disposal sites needed to serve the eastern Long Island Sound region. The SEIS is being prepared in accordance with Section 102(c) of the Marine Protection Research and Sanctuaries Act (MPRSA; also referred to as Ocean Dumping Act [ODA]) of 1972.

This report describes the physical and chemical properties of surface sediments collected at three alternative sites in eastern Long Island Sound. These three sites (New London, Niantic Bay, and Cornfield Shoals) were identified as part of the screening process during the preparation of the SEIS (see Chapter 3 of the SEIS for details). The three sites are located within a Zone of Siting Feasibility (ZSF) (Figure 1). The ZSF is defined as the area established by the USEPA for the potential designation of one or more dredged material disposal sites. The ZSF includes the following boundaries:

- *West:* Line drawn between Mulberry Point, Connecticut (near Guilford, Connecticut) to Mattituck Point, New York.
- *South:* Line drawn between Montauk, New York, to Block Island, Rhode Island.
- *East:* Line drawn between Block Island to Point Judith, Rhode Island.
- The shorelines of the States of Connecticut, New York, and Rhode Island, connecting the lines listed above.

Each of the three alternative sites is described in more detail below. Sediments at each site were collected for the analysis of grain size and the concentration of total organic carbon, metals, and organic compounds. Organic compounds consisted of polycyclic aromatic hydrocarbons (PAHs), pesticides, and polychlorinated biphenyls (PCBs).

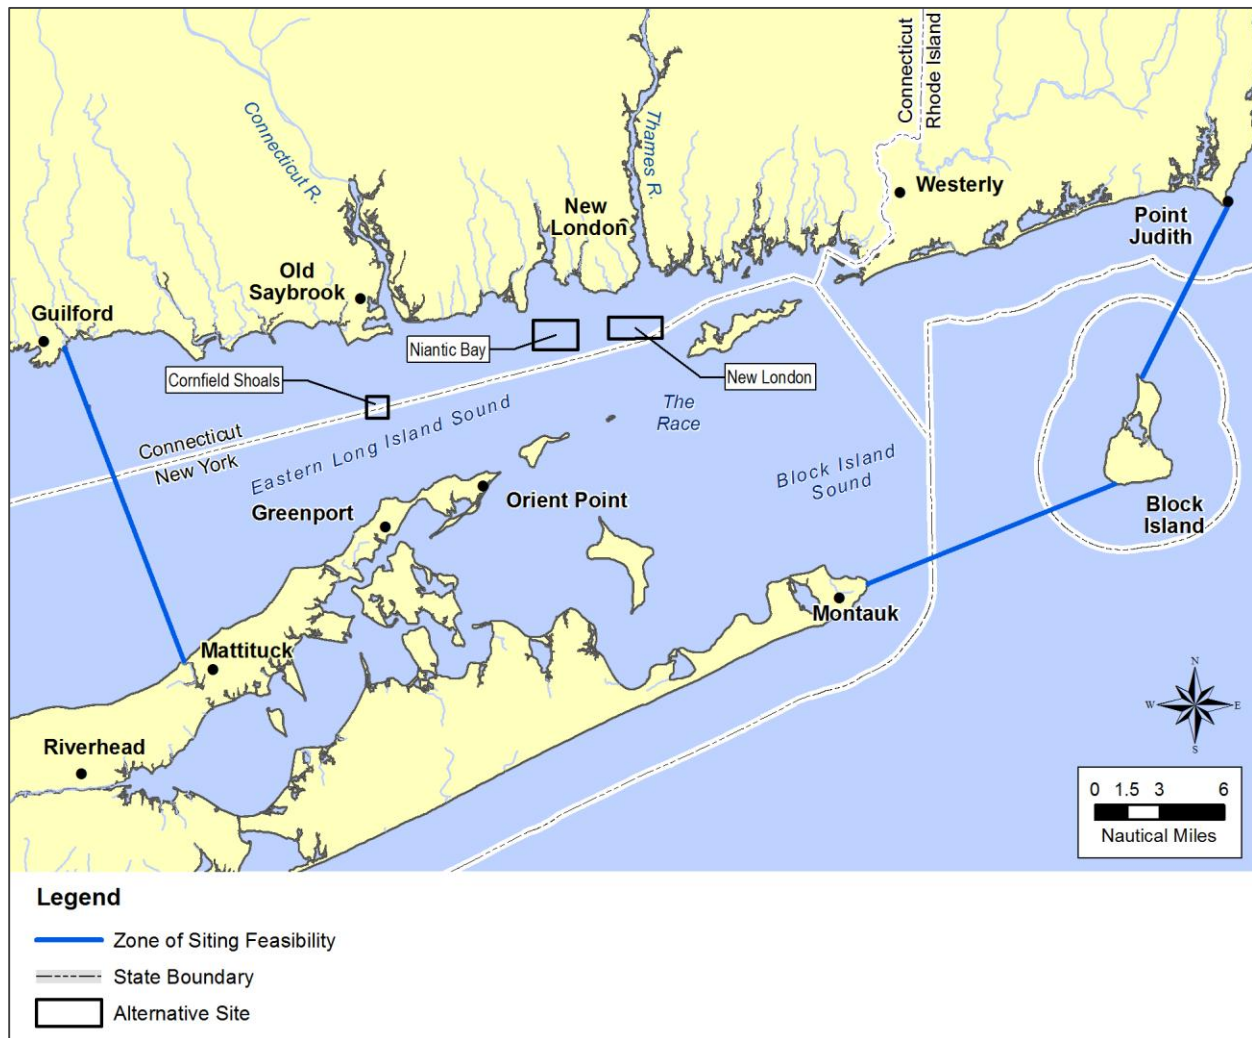

### 1.1 New London Alternative

The New London Alternative is a rectangular area with the dimensions 2.5 x 1 nautical miles (nmi), or 4.6 x 1.9 kilometer (km) (Figure 3; Table 1). Its boundary encompasses three areas: the active New London dredged material disposal site (NLDS) and two areas adjacent to the NLDS to the west (referred to hereafter as ‘Site NL-Wa’ and ‘Site NL-Wb’).

- **NLDS:** The NLDS is located in the eastern part of the New London Alternative along the New York-Connecticut state boundary. It has a area of one square nautical mile (nmi<sup>2</sup>), or 3.4 square kilometers (km<sup>2</sup>), centered at 41°16.306' N, 72°04.571' W (NAD83). Water depths at the NLDS range from 46 to 79 feet (14 to 24 m); the site is deepest at its southern boundary. Since 1982, approximately 3.5 million cubic yards (cy) (2.6 million m<sup>3</sup>) of dredged material have been disposed at the site (USEPA, 2015a). In addition, approximately 5.4 million cy (4.1 million m<sup>3</sup>) were disposed at the NLDS between 1955 and 1976 (Oceanic Society, 1982, which cited the CTDEEP and NYSDEC as sources for

the dredged material disposal information). Sediments at the site consists of fine sand and silt and clay (e.g., AECOM, 2009; Tetra Tech 2014). Much of the surface sediment at the site consists of placed dredged material.

- **Site NL-Wa:** Site NL-Wa is located in the mid-section of the New London Alternative. This square site has an area of 1 nmi<sup>2</sup> (3.4 km<sup>2</sup>). The site consists of mostly sandy areas, but also a shallow area of boulders and rocks in the north (WHG, 2014). Overall, water depths at the site range from approximately 45 feet (14 m) in the boulder area in the north to 100 feet (30 m) in the south.

**Figure 1.** Zone of Siting Feasibility and the three alternative sites.

- **Site NL-Wb:** Site NL-Wb is located in the western part of the New London Alternative. It is a rectangular area, 0.5 nmi (0.9 km) wide and 1 nmi (1.8 km) long, or 0.5 nmi<sup>2</sup> (1.7 km<sup>2</sup>). The site consists of an extension of the sandy area of Site NL-Wa. The southwestern corner of Site NL-Wb contains an area of bedrock and boulders, as well as some sand waves

(WHG, 2014). Overall, water depths at the entire site range from approximately 59 feet (18 m) in the north to 95 feet (28 m) in the south.

## 1.2 Niantic Bay Alternative

The Niantic Bay Alternative is located south of Niantic Bay, Connecticut, between the Connecticut and Thames Rivers. The Alternative is a rectangular area with the dimensions 2.1 x 1.33 nmi (3.9 x 2.5 km) (Figure 3; Table 1). The boundary of the Niantic Bay Alternative encompasses two areas, as follows:

- **NBDS:** The NBDS is located in the western part of the Niantic Bay Alternative. It has an area of 1.33 x 1.33 nmi (2.5 x 2.5 km), or 1.8 nmi<sup>2</sup> (6.2 km<sup>2</sup>). This site was used historically for the disposal of dredged materials between 1969 and 1972 when a total of 176,000 cy (135,000 m<sup>3</sup>) of dredged material was disposed at this location (Oceanic Society, 1982), but is not an active disposal site (USACE, 2014). Water depths at the site range from approximately 60 to 130 feet (18 to 40 m). Sediments at the site consist of sand to the north and northwest and mostly gravelly sediment with patches of gravel in the remainder of the area. The dominant size fraction in the sediments at the site is sand (Tetra Tech, 2014). The site contains a boulder area in the north-central part of the site (Poppe et al., 1998) and scour depressions in the south.
- **Site NB-E:** Site NB-E is located in the eastern part of the Niantic Bay Alternative. It has a rectangular area of 0.75 x 1.35 nmi, or 1 nmi<sup>2</sup> (3.4 km<sup>2</sup>). Water depths at Site NB-E range from 43 feet (13 m) in the north to 230 feet (70 m) in the southeast. Surface sediments at the site are generally similar to sediments at the NBDS. The southwestern corner of Site NB-E contains a bedrock area, which is an extension of an exposed area of bedrock to the south of the site.

## 1.3 Cornfield Shoal Alternative

The boundary of the Cornfield Shoals Alternative (Figure 4; Table 1) is identical to the active Cornfield Shoals dredged material disposal site (CSDS). The CSDS is located 3.3 nmi (6.1 km) south of Cornfield Point in Old Saybrook, Connecticut. It has a square of 1 nmi<sup>2</sup> (3.4 km<sup>2</sup>) and is centered at 41° 12.6858' N, 72° 21.4914' W (NAD83). An estimated 1.2 million cy (0.95 million m<sup>3</sup>) were disposed at the site between 1960 and 1976 (Oceanic Society, 1982), and an additional 1.7 million cy (1.3 million m<sup>3</sup>) were disposed between 1982 and 2013 (USEPA, 2015a). The site has a water depth of approximately 150 feet (46 m). The predominant topographic features are a sandy bottom and bedforms oriented in an east-west direction (Poppe et al., 2013).

## 2.0 METHODOLOGY

### 2.1 Sampling Stations

Sediment samples were collected at a total of 35 stations, following the preparation of a Quality Assurance Project Plan (QAPP) in February 2015. Station locations are summarized in Table 1 and shown in Figures 2 to 4, superimposed on water depth information obtained by the USGS and the National Oceanic and Atmospheric Administration (NOAA) (Poppe et al., 2011). Coordinates and other site information for each station are presented in Table 2. The sampling density was random, consisting of a grid that covered each alternative site; previous disposal of dredged material was not considered in the selection of the sampling stations. In addition, reference stations were added outside of the alternative sites. Reference stations are designed to provide information about the sediments in areas that have not received dredged material, for purposes of comparison with the sediment quality at the adjacent alternative site.

For the New London Alternative, 18 stations were sampled, including three reference stations (Table 2). For the Niantic Bay Alternative, 11 stations were sampled, including three reference stations. For the Cornfield Shoals Alternative, 6 stations were sampled, including one reference station. Several of the reference stations coincide with reference stations used by the USACE's Disposal Area Monitoring System (DAMOS) program.

Sampling was performed by staff from the University of Connecticut (UCONN) over three days (February 24, 25, and 27, 2015). Sampling was not performed on February 26, 2015 due to poor weather conditions. Kay Howard-Strobel was the project manager and was responsible for the sampling effort including coordinating logistics for use of the UCONN research vessel. She served as the Chief Scientist on the UCONN research vessel and ensured quality control in the field for collection of the sediment samples. The 76-foot long vessel (*R/V Connecticut*) used for this sampling was outfitted with sediment coring equipment and a differential GPS navigation system.

**Table 1. Summary of Sediment Sampling Stations**

Site	Number of Stations	Station ID <sup>1</sup>
NLDS	8	L-13 to L-18
NL-Wa	4	L-19, L-20, L21, L-21, L, 25

<sup>1</sup> Most samples were collected in one attempt. At one station, a second attempt was required as sediment was lost due to gravel or another obstruction on the seafloor that prevented closure of the sediment sampler.

## 2.2 Sampling Methods

Sediment samples for chemistry analyses were collected using a stainless steel Smith-MacIntyre grab sampler (Figure 5), a standard bottom grab used on oceanographic research vessels (USEPA, 2001). The grab sampler typically penetrates 15 cm into the bottom sediments, sampling a 0.1 m<sup>2</sup> area with a total volume of approximately 16 liters.

**Figure 5.** (left) Smith-MacIntyre grab sampler on the stern of the *R/V Connecticut*; (right) bottom sediment grab from Station L-55, Cornfield Shoals Disposal Site.

For each station and sample, the Chief Scientist and staff recorded the following information in a field log: date and time, coordinates, sample number, contracted lab label number, observed grain size, depth, sea state, and weather conditions (see Appendix 1). Each sample was inspected for signs of leakage and for overfilling. The jaws of the sampler had to be fully closed and the top of the sediment had to be below the level of the opening doors. The Chief Scientist made the final decision regarding acceptability of all grab samples, and the overall condition of the grab sample.

Each grab sample was emptied into a clean stainless steel container, homogenized with a stainless steel spoon, and then scooped into pre-labeled sample jars with that spoon. Between samples, the grab sampler, spoons, and containers were thoroughly cleaned with high-pressure sea water and a brush, and then rinsed with de-ionized water.

### 2.3 Sample Handling and Custody

Sample jars for chemical analyses consisted of be pre-cleaned eight ounce (250 ml) amber glass jars with Teflon screwed caps. Sediment containers for grain size and total organic carbon (TOC), and percent moisture consisted of pre-cleaned plastic eight ounce (250 ml) jars with Teflon screw caps.

Bottles were not filled to the top, to allow for expansion when frozen. The bottles and the containers were wiped clean and rinsed with deionized water. All bottles were labeled, secured with tape, individually bagged, and placed immediately in a cooler on ice following procedures in the Regional Implementation Manual (RIM) (USEPA and USACE, 2004b).

At the end of each sampling survey day, samples were relinquished to the contracted laboratory with Chain of Custody (COC) forms in accordance with RIM guidance. The COCs are included within Appendices 2 and 3. The contracted laboratory was Alpha Analytical, located in Mansfield, Massachusetts.

### 2.4 Sample Analyses

Samples were extracted and analyzed within two weeks, which was well within the holding times for the various analytes. Holding times were specified in the QAPP for this project. Analytical methods and the standard operating procedures (SOPs) that were followed by Alpha Analytical are summarized below.

- **Metals** (*Method 6020A; SOP 2137*): Metals were analyzed by Inductively Coupled Plasma – Mass Spectrometry. Based on this method, the sample is first digested in acid, and then nebulized to an aerosol. The resulting aerosol is transported to the plasma torch by argon gas; the ions produced in the plasma are sorted according to their mass-to-charge ratios and quantified with a channel electron multiplier.
- **Mercury** (*Method 7474; SOP 2143*): Total mercury was analyzed by Cold Vapor Atomic Fluorescence (CVAF). Based on this method, the sample is digested in an acidic, oxidizing solution to convert all forms of mercury to inorganic Hg (II). CVAF is based on fluorescence of radiation at 253.7 nm by mercury vapor. The oxidized mercury is reduced to insoluble elemental mercury, aerated as a vapor, and detected with an atomic fluorescence

spectrometer. Fluorescence is measured as a function of mercury concentration based on peak height measured.

- **Polycyclic Aromatic Hydrocarbons (PAHs) and Polychlorinated Biphenyl (PCB) congeners<sup>3</sup>** (Method 8270D; SOP 2157): These analytes were extracted using methylene chloride. Based on this method, the extract is cleaned up using silica gel and concentrated, an internal standard is added and then the extract is analyzed by gas chromatograph/mass spectrometer with selective ion monitoring mode (GC/MS-SIM). The target analytes are resolved on GC and detected using a mass selective detector. Concentrations are determined using mean relative response factors from a multi-level calibration curve. Response factors for target analytes and surrogate compounds are determined relative to the internal standards.
- **Pesticides** (Method 8081B; SOP 2158): Samples analyzed for pesticides were extracted with methylene chloride. Based on this method, the extract is cleaned up using silica gel and concentrated, an internal standard is added and then the extract is copper cleaned to remove sulfur and is then analyzed on a GC which is fitted with two capillary columns for differing polarities each employing separate detectors. The analytes are resolved on each column and detected using an electron capture detector. Concentrations are calculated from the electron capture detection (ECD) response using internal or external standard techniques. Identification of multiple peak components is made by comparison to analytical standards.
- **Grain size** (Method ASTM 422-63; SOP 2183): Sediment samples were analyzed using the sieve method for the following grain sizes: gravel, coarse sand, medium sand, fine sand, and fines (silt+clay).
- **Total organic carbon (TOC)** (Method 9060A; SOP 2182): TOC was measured using a carbonaceous analyzer. This instrument converts the organic carbon to carbon dioxide (CO<sub>2</sub>) by catalytic combustion. The CO<sub>2</sub> formed is then measured directly by a thermal conductivity detector. The amount of CO<sub>2</sub> in a sample is directly proportional to the concentration of carbonaceous material in the sample.

The data reports from Alpha Analytical are provided in Appendix 2 (for samples collected on February 24 and 25, 2015) and Appendix 3 (for samples collected on February 27, 2015). These data reports include method detection limits (MDLs) and reporting limits (RLs) for the various analyses, as applicable.

---

<sup>3</sup> A PCB congener is a single, unique well-defined chemical compound in the PCB category. The name of a congener specifies the total number of chlorine substituents and the position of each chlorine.

## 3.0 QUALITY CONTROL

### 3.1 Quality Control Measures

As specified in the QAPP from February 2015, quality control measures were taken in the field and in the laboratory.

- **Field quality control:** Measures samples that are field duplicates (or split samples) and replicates to evaluate field variability. For the field duplicate, one person filled the second bottle with the same homogenized sample used to fill the first bottle. There were a total of two duplicate samples; these samples were “blind” to the laboratory, meaning that sample containers had different sample numbers. Specifically, sample L-61 was a duplicate of the sample at Station L-15; sample L-62 was a duplicate of the sample at Station L-53 (see Table 2).
- **Laboratory quality control:** Laboratory quality control measures followed the laboratory’s SOPs. For each batch of up to 20 samples the following was performed: a matrix spike and sample duplicates to evaluate precision; a laboratory control sample, or standard, to evaluate accuracy; a method blank to evaluate contamination in the laboratory; surrogates to evaluate percent recovery; and a matrix spike to evaluate percent recovery. A method detection limit study is performed annually by the laboratory.

Acceptance criteria are listed in Table 3; they reflect the laboratories SOPs for the various analyses (*e.g.*, for percent recoveries of surrogates). Typical surrogate recovery criteria are 30% to 150%.

### 3.2 Data Quality Review

#### 3.2.1 Field Work

All field stations were sampled as planned; stations shown in Figures 2 to 4 are the actual locations sampled in the field. Only one station required two attempts for a successful grab (*i.e.*, Station L-15 at the NLDS). Date, time, coordinates, sample number, contracted laboratory label number, observed grain size, depth, sea state, and weather conditions were recorded in the field note book (Appendix 1).

#### 3.2.2 Data Quality Control

The USEPA Project Manager reviewed the quality control information from the contracted laboratory (Alpha Analytical) for acceptability with the requirements of the Regional Implementation Manual (USEPA and USACE, 2004b). The data reports from the laboratory provided the quality assurance data and batch information (see Appendices 2 and 3). The Chain-of-Custody forms, sample processing, and sample transport were provided as part of that package. Samples were analyzed according to specified holding times, methods, and detection limits as outlined in the QAPP for the project. Upon completion of the data quality control review, the USEPA Project Manager and QA Manager determined that these data are acceptable for use as supporting information for the Eastern Long Island Sound SEIS.

**Table 3. Quality Control Activities and Performance Criteria.**

<b>Data Quality Indicators</b>	<b>QC Sample and/or Activity Used to Assess Measurement Performance</b>	<b>Measurement Performance Criteria</b>
Precision-Field	One field duplicate field sample for every 20 samples.	Relative percent difference (RPD) $\leq$ 100%
Precision-Lab and Field Matrix Spike	Matrix spike duplicates.	RPD $\leq$ 75%
Accuracy/Bias-Lab	Laboratory control sample. Method blanks. Sample surrogate recovery.	Acceptable percent recovery in SOP less than Reporting Limit. Acceptable percent recovery in SOP.
Comparability	Compare to historical data, to reference site data and to project-specific data, using same methods as specified in RIM (USEPA and USACE, 2004b)	Must use RIM-specified methods. Deviation from SOPs should be communicated and approved.
Limit of Quantitation	Method detection limit study. Five point calibration.	Method detection limit must be three to five times less than reporting (quantitation) limit. Lowest calibration standard should equal reporting limit specified in RIM.
Completeness	Data Completeness Check	>90% of samples analyzed
Representativeness	Compare to tested dredged material and to navigational positioning	Navigational position will be verified to ensure that the sample is within the existing disposal sites in eastern LIS (CSDS, NLDS) and other locations in eastern LIS.

## 4.0 RESULTS

### 4.1. Data Tables

Data obtained during this study are provided in Tables 4 to 11; the legend is provided by the box below. These tables list the data contained in the two full data reports from the laboratory (Appendices 2 and 3). Table 12 presents summary statistics for areas with related stations (see Table 1). Mean and maximum values are presented for grain size, TOC, metals, PCBs, and PAHs. Data for pesticides were not summarized as there were only very few samples with any detected pesticide concentrations.

Legend for Tables 4 to 12	
12.1	<b>Size fractions of sand:</b> For grain size analyses of sand, three sand fractions (coarse sand, medium sand, fine sand) are reported, in addition to the sum ( <i>i.e.</i> , the total sand fraction). Boxes with the three sand fractions are highlighted in this pink color.
--	<b>No detection of metals and organic compounds:</b> Mark within a data box if a chemical analysis resulted in "No detection" for a specific metal or organic compound.
3.3	NOAA guideline value "Effects Range Low" (ERL). Concentrations that exceeded the ERL are also flagged within the data tables.
5.6	NOAA guideline value "Effects Range Medium" (ERM). None of the data exceeded the ERM.

Analytical results for metals and organic compounds can be compared to Effects Range Low (ERL) and Effects Range Median (ERM) values, developed by NOAA as a screening tool to estimate the relative degree of contamination (Long et al., 1995; Buchman, 1999). However, these guideline values should not be used to infer causality because of the inherent variability and uncertainty of the approach. These values are based upon data primarily of marine sediment chemistry paired with sediment toxicity bioassay data (USEPA, 2015b). To calculate an ERL value for a given analyte, concentration data obtained from studies are ranked from lowest to highest concentrations. The ERL value is indicative of concentrations below which adverse biological effects rarely occur. The ERM value is indicative of concentrations above which adverse biological effects frequently occur.

### 4.2 Grain Size and Total Organic Carbon

Consistent with data from the USGS (Poppe et al., 2000) and also with sediment grain size data obtained by Tetra Tech (2014), the mean grain size throughout all three Alternatives was medium to fine sand, although grain sizes were more variable within the NLDS (Tables 4, 5 and 12). The TOC concentration was below 1% in most samples from the three alternative sites, with generally higher concentrations at the NLDS reflecting the disposed dredged material at this site.

**Table 4. Grain Size, Total Organic Carbon, and Total Metals at the New London Alternative**

Alternative	Area	Station ID	Grain Size (%)						TOC (%)			Total Solids (%)	Metals (mg/kg/ dry weight)

#### **4.2.1 New London Alternative**

The predominant grain size within the New London Alternative was fine sand. Sediments were on average finer-grained within the NLDS than in areas outside of the NLDS. Specifically, at the NLDS, the mean sand content (all sand fractions) was 55%, while the mean sand content at areas outside the NLDS ranged from 72% to 90% (Table 12). The mean silt and clay content at the NLDS was 36%, which was approximately 2 to 3 times higher than the average silt and clay content in areas west of the NLDS; however, the mean silt and clay content at the NLDS was similar to the reference area to the east of the NLDS. The highest silt and clay content was measured at Station L-18 (78%), which was located in the area of the NLDS that had been receiving most of the dredged material in the previous decade (AECOM, 2009; Figure 6).

The TOC concentrations at stations within and around the New London Alternative were similar to the pattern observed in the grain size data, with higher TOC concentrations in finer-grained sediments. The mean TOC concentrations measured at the NLDS was 1.7%, which was several about 2 to 4 times higher than the mean TOC concentrations at all the other areas. The highest TOC concentration was measured at Station L-18 with 3.5%.

#### **4.2.2 Niantic Bay Alternative**

The mean grain size within the NBDS and surrounding sampling locations was sand at approximately 80%, with fine sand being the largest fraction (Table 12). The silt and clay content was low, with a mean ranging between 4% and 15%. None of the individual samples for the Niantic Bay Alternative had a silt and clay content higher than 16%.

The TOC concentrations at stations in the Niantic Bay Alternative were generally below 1%, with the exception of two stations to the east of Site NL-E (Stations L-39 and L-40); the mean TOC concentration at these two stations was 1.5%.

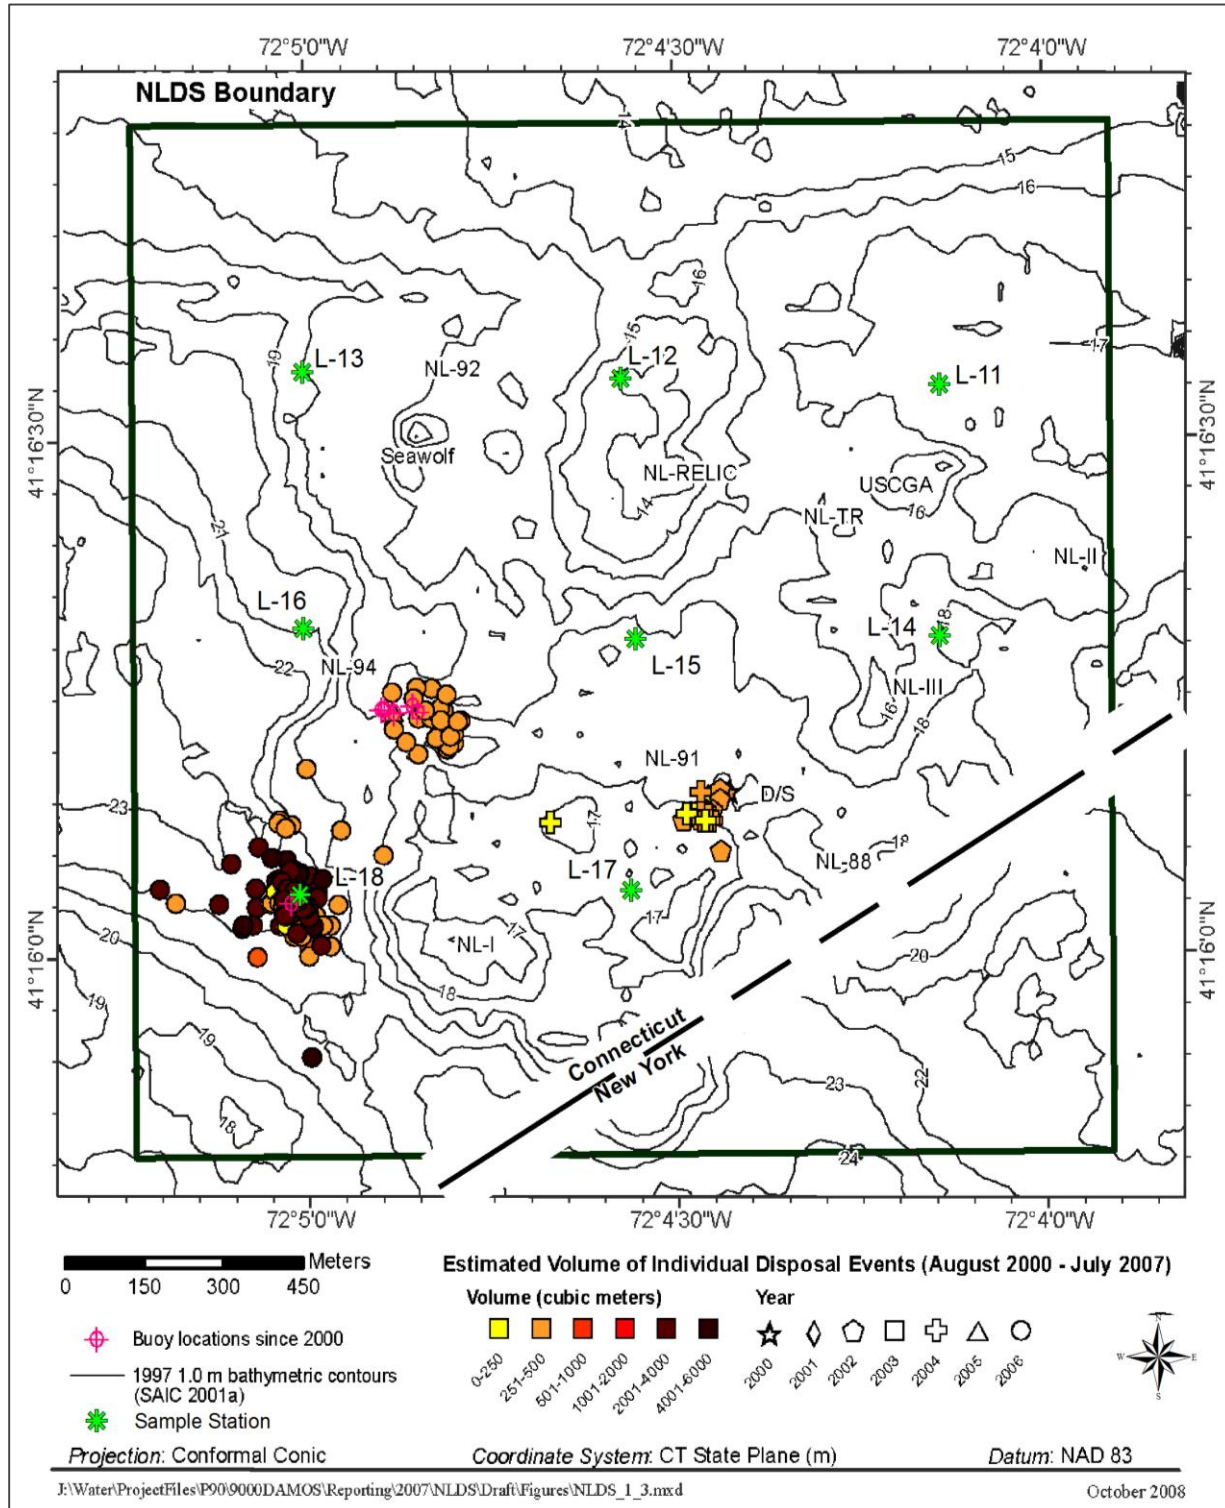

#### **4.2.3 Cornfield Shoals Alternative**

The predominant grain size within the CSDS and in the reference area was also sand, with medium sand being the largest fraction. The mean silt and clay content was 8.3% for the five stations within the CSDS, but varied considerably between the stations. At the center of the CSDS, the silt and clay content was 28% (Station L-51), which was significantly higher than the silt and clay content at the other four stations within the CSDS (range of 2 to 6%). The silt and clay content (36%) at the reference station, located 0.6 nmi (1.1 km) to the west of the CSDS, was similar to the silt and clay content at the center of the CSDS.

The TOC concentration in the sample from the center of the CSDS was 1.0%. Sediments at other sampling stations within the CSDS as well as the reference areas contained less than 0.5% TOC.

### **4.3 Metals**

Metal concentrations analyzed at the three alternative sites were low (Tables 4, 5, and 12).

**Figure 6.** Sediment sampling stations of the 2015 survey at the New London Disposal Site (green asterisks, and station number L-\_\_), superimposed on the bathymetry from July 2007 along with reported August 2000 through July 2007 dredged material disposal locations (from AECOM, 2009; the AECOM report includes details on dredged material volumes and disposal mounds).

#### **4.3.1 New London Alternative**

None of the metal concentrations at any of the stations collected for the New London Alternative exceeded the ERM values. Only two individual samples exceeded the ERL values for any analyzed metal. Specifically, the copper concentration at Station L-13 in the northwestern part of the NLDS was 45 mg/kg; the copper concentration in Station L-16 was 41 mg/kg. These concentrations were slightly above the ERL value for copper of 37 mg/kg, but well below the ERM value of 270 mg/kg.

None of the mean metal concentrations exceeded the ERL value at any site within the New London Alternative. Mean concentrations for most metals were roughly 50% lower within Sites NL-Wa/b than within Site NLDS (Table 12), reflecting background conditions since Sites NL-Wa and NL-Wb have not received dredged material. This includes the three stations from the eastern part of Site NL-Wa (Stations L-19 to L-21) located just to the west of the NLDS, which suggests that dredged material is contained within the NLDS.

Metals concentrations in the reference area to the east of the NLDS were slightly higher than at Sites NL-Wa and NL-Wb.

#### **4.3.2 Niantic Bay Alternative**

None of the metal concentrations at any of the stations collected for the Niantic Bay Alternative exceeded the ERM or ERL values. Concentrations were consistently low. Mean metal concentrations between the NBDS and areas outside were similar.

#### **4.3.3 Cornfield Shoals Alternative**

None of the metal concentrations at any of the stations collected for the Cornfield Shoals Alternative exceeded the ERM or ERL values. Concentrations were consistently low. Metal concentrations at Station L-53 were higher (although still well below the ERL value) than at the four other stations within the CSDS, reflecting disposal activity in the center in the past (ENSR, 2005). This observation is consistent with the higher silt and clay content at Station L-53 (28%), compared to the low silt and clay content at the four other stations (mean of 3.5%).

### **4.4 Polycyclic Aromatic Hydrocarbons (PAHs)**

Sediments were analyzed for 16 PAHs. PAHs were grouped into low molecular weight (LMW) PAHs and high molecular weight (HMW). In general, PAHs were low or often not detected (Tables 6 and 7). For the New London Alternative, the mean Total PAH concentrations were highest at the NLDS. For the Cornfield Shoals Alternative, Total PAH concentrations were higher in the center of the CSDS than at the other stations within the CSDS. There was no specific trend for the Niantic Bay Alternative.

The mean LMW, HMW, or Total PAHs concentrations did not exceed the ERM or ERL values in any of the various areas of the three Alternatives. No individual sample exceeded the ERM value; only one sample (Station L-13 within the NLDS) exceeded the ERL value for multiple compounds

(acenaphthene, fluorine, phenanthrene, anthracene, fluoranthene, pyrene, benza(a)anthracene, chrysene, benzo(a)pyrene, and dibenz(a,h)anthracene), as well as the ERL values for LMW, HMW, and Total PAHs, suggesting evidence of past dredged material disposal. PAHs in recently disposed dredged material (Station L-18; Figure 6) were well below the ERL values.

#### **4.5 Pesticides**

The sediment samples collected at the alternative sites were analyzed for 19 pesticides (Tables 8 and 9). Pesticides were only detected above the analytical reporting limit at six stations (4 stations at the NLDS, one station at the off-site area to the east of the New London Alternative, and one station at the CSDS). None of the detected concentrations exceeded the ERM values. Only two NLDS samples slightly exceeded ERL values: in Sample L-13, the concentration for the sum of DDD, DDE, and DDT of 1.70 µg/kg slightly exceeded the ERL value of 1.58 µg/kg; in Sample L-17, the DDT concentration of 1.48 µg/kg slightly exceeded the ERL value of 1 µg/kg.

#### **4.6 Polychlorinated Biphenyls (PCBs)**

The surface sediment collected during the 2015 sediment chemistry survey was analyzed for 22 PCB congeners. PCBs were only detected above the analytical reporting limit at three stations (two at the NLDS, and one at the CSDS) (Tables 10 and 11). None of the detected concentrations exceeded the ERM value for total PCBs. Only the total PCB concentration in Sample L-17 (55.9 µg/kg), located at the NLDS, exceeded the ERL value (22.7 µg/kg).

## 5.0 SUMMARY

Sediment samples were collected within and around the three alternative sites analyzed in the SEIS (New London, Niantic Bay, and Cornfield Shoals). Sediment samples were collected at a total of 35 stations in February 24-27, 2015. Samples were analyzed for physical and chemical properties, which included grain size, TOC, metals, PAHs, pesticides, and PCBs.

Sediments at the New London Alternative consisted primarily of fine sand, consistent with dredged material disposal at the NLDS (which is part of the New London Alternative). TOC and chemical concentrations were higher in the sediment at the NLDS than in other areas of the New London Alternative (*i.e.*, at Sites NL-Wa and NL-Wb) or at the Niantic Bay and Cornfield Shoals Alternatives. Two samples from the NLDS exceeded the ERL for copper, and one sample each exceeded the ERLs for PAHs, pesticides, and PCBs; however, none of the samples exceeded any ERM values.

Sediments at the Niantic Bay and Cornfield Shoals Alternatives were medium to fine grained. None of the metals or organic compound concentrations exceeded the ERL or ERM values.

**Project Name:** LIS-USACOE RIM DREDGE  
**Project Number:** Not Specified

**Lab Number:** L1503503  
**Report Date:** 03/16/15

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEX data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

---

**Project Name:** LIS-USACOE RIM DREDGE  
**Project Number:** Not Specified

**Lab Number:** L1503503  
**Report Date:** 03/16/15

### Case Narrative (continued)

#### Report Submission

This report replaces the one issued on March 11, 2015. The report was amended to correct the grain size results.

#### Semivolatile Organics

##### PAHs and PCBs by GC/MS-SIM

Sample L1503503-01 was inadvertently spiked with twice the concentration of internal standard for Cl2-BZ#15-C13 and CL17BZ#180-C13. The concentration was adjusted on the quantitation report in order to perform an accurate calculation of the sample results. This is evident in on the quantitation report in the data deliverable package as well as on Form 8 of the CLP-package.

The WG766025-6 Laboratory Duplicate RPD, performed on L1503503-07, is outside the acceptance criteria for several compounds. The elevated RPDs have been attributed to the non-homogeneous nature of the sample utilized as the sample duplicate.

The standard reference material (SRM) WG766025-7 has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

#### Pesticides

The Pesticide analysis was performed utilizing dual column confirmation with the higher of the two values reported. If the relative percent difference (RPD) was above the acceptance criteria the compound is reported with a "P" qualifier. Technical judgment was employed in the case of an observed interference. In the case that interference was observed on one column, the lower value is reported and qualified with an "I".

The opening continuing calibration standard WG766870-1, associated with samples L1503503-01 through -06, WG766032-1, -2 and -3, had the response for Hexachlorobenzene (15.2%D-column B) and alpha-Chlordane (19.7%D-column B) outside the individual acceptance criteria but within method allowance, therefore no further action was taken.

**Project Name:** LIS-USACOE RIM DREDGE  
**Project Number:** Not Specified

**Lab Number:** L1503503  
**Report Date:** 03/16/15

### Case Narrative (continued)

The continuing calibration standard WG766870-2, which is the closing standard for samples L1503503-01 through -06, WG766032-1, -2 and -3 and the opening standard for samples L1503503-08 through -12, had the response for alpha-Chlordane (18.2%D-column B) outside the individual acceptance criteria but within method allowance, therefore no further action was taken.

The closing continuing calibration standard WG766870-3, associated with samples L1503503-08 through -12, had the response for alpha-Chlordane (18.1%D-column B) outside the individual acceptance criteria but within method allowance, therefore no further action was taken.

The closing continuing calibration standard WG766870-5, associated with samples L1503503-13 through -20, -07, WG766032-5, -6 and -7D, had the response for gamma-BHC (15.1%D-column A), Aldrin (15.3%D-column A) and 4,4'-DDD (16.5%D-column A) outside the individual acceptance criteria but within method allowance, therefore no further action was taken.

The opening continuing calibration standard WG766870-6, associated with sample WG766032-4, had the response for gamma-BHC (15.4%D-column A), Aldrin (15.3%D-column A) and 4,4'-DDD (15.7%D-column A) outside the individual acceptance criteria but within method allowance, therefore no further action was taken.

The closing continuing calibration standard WG766870-7, associated with sample WG766032-4, had the response for gamma-BHC (16.4%D-column A), Aldrin (16.5%D-column A) and Dieldrin (15.1%D-column A) outside the individual acceptance criteria but within method allowance, therefore no further action was taken.

The performance evaluation mixture (PEM) (R7447821-1) was inadvertently analyzed after the continuing calibration standard (WG766870-1) after instrument maintenance was performed. The breakdown was within criteria for the PEM and the all of the monitored compounds were within acceptance criteria for the associated standard WG766870-1, therefore no further action was taken.

The standard reference material (SRM) WG766032-7 had the compound trans-Nonachlor recovered above

**Project Name:** LIS-USACOE RIM DREDGE  
**Project Number:** Not Specified

**Lab Number:** L1503503  
**Report Date:** 03/16/15

### Case Narrative (continued)

the acceptance criteria at 316% due to matrix interference. All other monitored compounds were recovered within acceptance criteria. In addition the SRM has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

#### Total Organic Carbon

Samples L1503503-02, -05: The Sample Replicate RPD is outside the acceptance criteria of 30%. A double-burn re-analysis was performed with confirming results. The results of the original analysis are reported. The elevated RPD has been attributed to the non-homogeneous nature of the sample.

The WG766621-4/-5 MS/MSD recoveries for Total Organic Carbon (Rep1 - 60%/65%) and (Rep2 - 136%), performed on L1503503-07, are outside the 75-125% acceptance criteria, possibly due to sample matrix. The associated SRM recoveries are within criteria indicating the sample batch was in control, and all sample results were accepted.

#### Grain Size Analysis

The WG766710-1 Laboratory Duplicate RPD, performed on L1503503-07, is outside the acceptance criteria for Percent Total Gravel (38%) and Percent Total Fines (29%). The elevated RPD has been attributed to the non-homogeneous nature of the sample utilized for the laboratory duplicate.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

## GLOSSARY

### Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

### Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

### Terms

**Total:** With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

### Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

**Report Format:** Data Usability Report

**Project Name:** LIS-USACOE RIM DREDGE  
**Project Number:** Not Specified

**Lab Number:** L1503503  
**Report Date:** 03/16/15

#### **Data Qualifiers**

- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the reporting limit (RL) for the sample.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

**Table II-1: Completeness Checklist**

<b>Quality Assurance/Quality Control Questions</b>	<b>Yes/No? Comments?</b>
1. Was the report signed by the responsible applicant approved representative?	Yes
2. Were the methods for sampling, chemical and biological testing described in the Sampling and Analysis Plan (SAP) and the Laboratory QA Plan (LQAP) followed?	Yes
3. If not, were deviations documented?	Yes
4. Was the SAP approved by the New England District?	
5. Did the applicant use a laboratory with a LQAP on file at the New England District?	Yes
6. Did the samples adequately represent the physical/chemical variability in the dredging area?	
7. Were the correct stations sampled (include the precision of the navigation method used)?	
8. Were the preservation and storage requirements in Chapter 8 of the EPA/Corps QA/QC Manual (EPA/USACE 1995) and EPA (2001d) followed?	Yes
9. Were the samples properly labeled?	Yes
10. Were all the requested data included?	Yes
11. Were the reporting limits met?	Yes
12. Were the chain-of-custody forms properly processed?	Yes
13. Were the method blanks run and were the concentration below the acceptance criteria?	Yes
14. Was the MDL study performed on each matrix (with this data submission) or within the last 12 months?	Yes
15. Were the SRM/CRM analyses within acceptance criteria?	No – see Narrative
16. Were the matrix spike/matrix spike duplicates run at the required frequency and was the percent recovery/RPD within the acceptance criteria?	No – see Narrative
17. Were the duplicate samples analyzed and were the RPDs within the required acceptance criteria?	No –see Narrative
18. For each analytical fraction of organic compounds, were recoveries for the internal standard within the acceptance criteria?	Yes
19. Were surrogate recoveries within the required acceptance criteria?	Yes

**Table II-1 (Continued): Completeness Checklist**

<b>Quality Assurance/Quality Control Questions</b>	<b>Yes/No? Comments?</b>
20. Were corrective action forms provided for all non-conforming data?	Yes
21. Were all the species-specific test conditions in Appendix V met?	
22. Were the test-specific age requirements met for each test species?	
23. Was the bulk physical/chemical testing performed on the sediments/composites that were biologically tested?	
24. Were the mortality acceptance criteria met for the water column and sediment toxicity tests?	
25. Were the test performance requirements in Table 11.3 of EPA (1994a) met?	

**Table II-2: Quality Control Summary for Analyses of Polyaromatic Hydrocarbons (PAHs) and other base-neutrals in Sediment and Tissue Matrices**

Method Reference Number: 8270D

<b>Quality Control (QC) Element</b>	<b>Acceptance Criteria*</b>	<b>Criteria Met? Yes/No</b>	<b>List results outside criteria (Cross-reference results table in data report)</b>	<b>Location of Results (Retained at Lab or in Data Package)</b>
Initial Calibration	Must be performed prior to the analysis of any QC sample or field sample (<20 % RSD for each compound)	YES		Retained at Lab
Calculation of Method Detection Limits (MDLs)	For each matrix, analyzed once per 12 month period (see Section 5.2 for MDL procedure)	YES		Retained at Lab and On file at USACoE-NED
Calibration Verification (Second Source)	Once, after initial calibration (80 to 120% recovery of each compound)	YES		Retained at Lab
Continuing Calibration	At the beginning of every 12 hour shift ( $\pm 15\%$ D)	YES		Retained at Lab
Standard Reference Materials	Within the limits provided by vendor	YES	In House Limits 40%-140%	In Data Package
Method Blank	No target analytes > RL	YES		In Data Package
Matrix Spike/Matrix Spike Duplicate (MS/MSD)	One set (MS/MSD) per group of field samples. Must contain all target analytes. (Recovery Limits 50 to 120%; RPD <30%)	YES		In Data Package
Analytical Replicates	Analyze one sample in duplicate for each group of field samples (RPD < 30%)	NO	Acenaphthylene (58%), Phenanthrene (61%), Anthracene (44%), Fluoranthene (59%), Pyrene (52%), Benz(a)anthracene (65%), Chrysene (51%), Benzo(b)fluoranthene (68%), Benzo(k)fluoranthene (41%), Benzo(a)pyrene (57%), Indeno(1,2,3-cd)pyrene (55%), Dibenz(a,h)anthracene (64%), Benzo(ghi)perylene (58%).	In Data Package
Surrogate Recoveries	Calculate % recovery (30 to	YES		In Data Package

M:\Report\QC Summary Tables\2015\UCONN\L1503503.doc

	150% recovery)			
Internal Standard Areas	Within 50 to 200% of internal standards in continuing calibration check	YES		Retained at Lab

\* The Quality Control Acceptance Criteria are general guidelines. If alternate criteria are used, they must be documented in this table.

**Table II-3: Quality Control Summary for the Analyses of Pesticides in Sediment, Tissue, and Water Matrices**

Method Reference Number: 8081B

<b>Quality Control (QC) Element</b>	<b>Acceptance Criteria*</b>	<b>Criteria Met? Yes/No</b>	<b>List results outside criteria (Cross-reference results table in data report)</b>	<b>Location of Results (Retained at Lab or in Data Package)</b>

Regional Implementation Manual for the Evaluation of Dredged Material Proposed for Disposal in New England Waters, U.S. EPA and U.S. Army Corps of Engineers, New England District, April 2004.

## Certification Information

Last revised December 16, 2014

---

**The following analytes are not included in our NELAP Scope of Accreditation:**

### Westborough Facility

**EPA 524.2:** Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.

**EPA 8260C:** 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.

**EPA 8270D:** 1-Methylnaphthalene, Dimethylnaphthalene, 1,4-Diphenylhydrazine.

**EPA 625:** 4-Chloroaniline, 4-Methylphenol.

**SM4500:** Soil: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

**EPA 9071:** Total Petroleum Hydrocarbons, Oil & Grease.

### Mansfield Facility

**EPA 8270D:** Biphenyl.

**EPA 2540D:** TSS

**EPA TO-15:** Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

---

**The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:**

### Drinking Water

**EPA 200.8:** Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7:** Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;

**EPA 300.0:** Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**

**EPA 332:** Perchlorate.

**Microbiology:** **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

### Non-Potable Water

**EPA 200.8:** Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;

**EPA 200.7:** Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;

**EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, EPA 350.1:** Ammonia-N, **LACHAT 10-107-06-1-B:** Ammonia-N, **SM4500NO3-F, EPA 353.2:** Nitrate-N, **SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**

**EPA 624:** Volatile Halocarbons & Aromatics,

**EPA 608:** Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

**EPA 625:** SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045:** PCB-Oil.

**Microbiology:** **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF.**

### Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

#### HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

**Project Number:** Not Specified

**Lab Number:** L1503772  
**Report Date:** 03/16/15

### Case Narrative (continued)

#### Report Submission

This report replaces the one issued on March 12, 2015. The report was amended to correct grain size analysis results.

#### Semivolatile Organics

##### PAHs and PCBs by GC/MS-SIM

The surrogate recovery for sample L1503772-13 is outside the individual acceptance criteria for 2-Methylnaphthalene-d10 (27%), but within the overall method allowances.

The WG766355-4 Standard Reference Material is outside the QC limits for CL3-BZ#28 (33%).

The WG766355-6 /-7MS/MSD RPD(s), associated with samples L1503772-13 through -22, are above the acceptance criteria for Benzo(b)fluoranthene (31%).

#### Pesticides

The Pesticide analysis was performed utilizing dual column confirmation with the higher of the two values reported. If the relative percent difference (RPD) was above the acceptance criteria the compound is reported with a "P" qualifier. Technical judgment was employed in the case of an observed interference. In the case that interference was observed on one column, the lower value is reported and qualified with an "I".

The laboratory control sample duplicate WG766344-3 recoveries, associated with L1503772-01 through -07, are above the acceptance criteria for 4,4'-DDD (135%) and Methoxychlor (128%); however, the associated samples are non-detect for these target compounds. The LCS recoveries were within criteria therefore no action was required.

The standard reference material (SRM) WG766345-4 had the compound trans-Nonachlor at 270%, and the Surrogate BZ #198 at 169% for Column B, recovered above the acceptance criteria, due to matrix interference. All other monitored compounds and surrogates were recovered within acceptance criteria. In addition the SRM

### Case Narrative (continued)

has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

The continuing calibration standard WG766869-1, associated to samples L1503772-08 through -12 and WG766345-5, had the response for Hexachlorobenzene (15.4%D - column B) and alpha-Chlordane (20.3%D-column B) outside the individual acceptance criteria but within allowance. The compound alpha-Chlordane was not detected above the reporting limit for column A; therefore no further action was taken.

The continuing calibration standard WG766869-2, associated to samples L1503772-08 through -19, WG766345-1, -2, -3 and -5, had the response for Hexachlorobenzene (19.2%D - Column B), Heptachlor (17.6%D-Column B), Heptachlor epoxide (B) (16.3%D-Column B), Oxychlordane (17.8%D-Column B), gamma-Chlordane (16.3%D-Column B), Endosulfan I (16.5%D-Column B), alpha-Chlordane (25.1%D-Column B), trans-Nonachlor (17.5%D-Column B), Endrin (18.6%D-Column B) and Endosulfan II (15.6%D-Column B) outside the individual acceptance criteria but within method allowance. The compound alpha-Chlordane was not detected above the reporting limit for column A; therefore no further action was taken.

The continuing calibration standard WG766869-3, associated to samples L1503772-13 through -22 as well as the associated QC WG766345-1, -2, -3, -4, -6 and -7 had the response for TMX (17.9%D-Column B), Hexachlorobenzene (19.1%D - Column B), Heptachlor (18.3%D-Column B), Heptachlor epoxide (B) (15.6%D-Column B), Oxychlordane (16.8%D-Column B), gamma-Chlordane (15.8%D-Column B), Endosulfan I (15.4%D-Column B), alpha-Chlordane (24.1%D-Column B), trans-Nonachlor (16.1%D-Column B), Endrin (19.4%D-Column B), Methoxychlor (17.4%D-Column B) and DCB (17.2%D-Column B) outside the individual acceptance criteria but within method allowance. The compound alpha-Chlordane was not detected above the reporting limit for column A; therefore no further action was taken.

The continuing calibration standard WG766869-4, associated to samples L1503772-20 through -22, WG766345-4, -6 and -7 had the response for Hexachlorobenzene (15.3%D - Column B), alpha-Chlordane (20.8%D-Column B), Endrin (15.8%D-Column B) and DCB (15.2%D-Column B) outside the individual

### Case Narrative (continued)

acceptance criteria but within method allowance. The compound alpha-Chlordane was not detected above the reporting limit for column A; therefore no further action was taken.

The continuing calibration standard WG766869-7, associated to samples L1503772-01 through -07 had the response for gamma-BHC (15.1%D-Column A), Aldrin (15.3%D-Column A) and 4,4'-DDD (16.5%D-Column A) outside the individual acceptance criteria but within method allowance, therefore no further action was taken.

The continuing calibration standard WG766869-8, associated to samples L1503772-01 through -07 had the response for gamma-BHC (15.4%D-Column A), Aldrin (15.4%D-Column A), Dieldrin (15.3%D-Column A) and 4,4'-DDD (15.7%D-Column A) outside the individual acceptance criteria but within method allowance, therefore no further action was taken.

#### Metals

The CCB has a concentration above the reporting limit for Arsenic. Since the associated sample concentrations are greater than 10x the blank concentration for this analyte, no corrective action is required.

The WG766043-3 Laboratory Duplicate RPD, performed on L1503772-01, is above the acceptance criteria for Cadmium (34%); however, the sample and duplicate results are less than five times the reporting limit. Therefore, the RPD is valid.

The WG766048-3 Laboratory Duplicate RPD, performed on L1503772-22, is outside the acceptance criteria for Arsenic (27%) and Chromium (26%). The elevated RPD has been attributed to the non-homogeneous nature of the sample utilized for the laboratory duplicate.

#### Total Organic Carbon

The WG767492-4 MS recovery for Total Organic Carbon (Rep2 - 73%), performed on L1503772-10, is outside the 75-125% acceptance criteria, possibly due to sample matrix. The associated SRM recoveries are within criteria indicating the sample batch was in control, and all sample results were accepted.

**Project Name:** LIS-USACOE RIM DREDGE  
**Project Number:** Not Specified

**Lab Number:** L1503772  
**Report Date:** 03/16/15

### Case Narrative (continued)

The WG767492-5 MS recovery for Total Organic Carbon (Rep2 - 192%), performed on L1503772-13, is outside the 75-125% acceptance criteria, possibly due to sample matrix. The associated SRM recoveries are within criteria indicating the sample batch was in control, and all sample results were accepted.

The WG767511-5 MSD recovery for Total Organic Carbon (Rep1 - 141%), performed on L1503772-22, is outside the 75-125% acceptance criteria, possibly due to sample matrix. The associated SRM recoveries are within criteria indicating the sample batch was in control, and all sample results were accepted. In addition, the WG767511-4/-5 MS/MSD RPD for Total Organic Carbon (Rep2 - 39%) is above the acceptance criteria.

#### Grain Size Analysis

The WG767551-1 Laboratory Duplicate RPD, performed on L1503772-01, is outside the acceptance criteria for Percent Total Gravel (119%), Percent Coarse Sand (48%) and Percent Medium Sand (27%). The elevated RPD has been attributed to the non-homogeneous nature of the sample utilized for the laboratory duplicate.

The WG767555-1 Laboratory Duplicate RPD, performed on L1503772-22, is outside the acceptance criteria for Percent Total Gravel (25%). The elevated RPD has been attributed to the non-homogeneous nature of the sample utilized for the laboratory duplicate.

## GLOSSARY

### Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

### Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

### Terms

**Total:** With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

**Analytical Method:** Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

### Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

Report Format: Data Usability Report

**Project Name:** LIS-USACOE RIM DREDGE  
**Project Number:** Not Specified

**Lab Number:** L1503772  
**Report Date:** 03/16/15

#### Data Qualifiers

- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.
- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the reporting limit (RL) for the sample.

## LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

**Table II-1: Completeness Checklist**

<b>Quality Assurance/Quality Control Questions</b>	<b>Yes/No? Comments?</b>
1. Was the report signed by the responsible applicant approved representative?	Yes
2. Were the methods for sampling, chemical and biological testing described in the Sampling and Analysis Plan (SAP) and the Laboratory QA Plan (LQAP) followed?	Yes
3. If not, were deviations documented?	Yes
4. Was the SAP approved by the New England District?	
5. Did the applicant use a laboratory with a LQAP on file at the New England District?	Yes
6. Did the samples adequately represent the physical/chemical variability in the dredging area?	
7. Were the correct stations sampled (include the precision of the navigation method used)?	
8. Were the preservation and storage requirements in Chapter 8 of the EPA/Corps QA/QC Manual (EPA/USACE 1995) and EPA (2001d) followed?	Yes
9. Were the samples properly labeled?	Yes
10. Were all the requested data included?	Yes
11. Were the reporting limits met?	Yes
12. Were the chain-of-custody forms properly processed?	Yes
13. Were the method blanks run and were the concentration below the acceptance criteria?	Yes
14. Was the MDL study performed on each matrix (with this data submission) or within the last 12 months?	Yes
15. Were the SRM/CRM analyses within acceptance criteria?	No – see Narrative
16. Were the matrix spike/matrix spike duplicates run at the required frequency and was the percent recovery/RPD within the acceptance criteria?	No – see Narrative
17. Were the duplicate samples analyzed and were the RPDs within the required acceptance criteria?	No –see Narrative
18. For each analytical fraction of organic compounds, were recoveries for the internal standard within the acceptance criteria?	Yes
19. Were surrogate recoveries within the required acceptance criteria?	No – see Narrative

**Table II-1 (Continued): Completeness Checklist**

<b>Quality Assurance/Quality Control Questions</b>	<b>Yes/No? Comments?</b>
20. Were corrective action forms provided for all non-conforming data?	Yes
21. Were all the species-specific test conditions in Appendix V met?	
22. Were the test-specific age requirements met for each test species?	
23. Was the bulk physical/chemical testing performed on the sediments/composites that were biologically tested?	
24. Were the mortality acceptance criteria met for the water column and sediment toxicity tests?	
25. Were the test performance requirements in Table 11.3 of EPA (1994a) met?	

**Table II-2: Quality Control Summary for Analyses of Polyaromatic Hydrocarbons (PAHs) and other base-neutrals in Sediment and Tissue Matrices**

Method Reference Number: 8270D

<b>Quality Control (QC) Element</b>	<b>Acceptance Criteria*</b>	<b>Criteria Met? Yes/No</b>	<b>List results outside criteria (Cross-reference results table in data report)</b>	<b>Location of Results (Retained at Lab or in Data Package)</b>
Initial Calibration	Must be performed prior to the analysis of any QC sample or field sample (<20 % RSD for each compound)	Yes		Retained at Lab
Calculation of Method Detection Limits (MDLs)	For each matrix, analyzed once per 12 month period (see Section 5.2 for MDL procedure)	Yes		Retained at Lab and On file at USACoE-NED
Calibration Verification (Second Source)	Once, after initial calibration (80 to 120% recovery of each compound)	Yes		Retained at Lab
Continuing Calibration	At the beginning of every 12 hour shift ( $\pm 15\%$ D)	Yes		Retained at Lab
Standard Reference Materials	Within the limits provided by vendor	Yes	In house limit 40%-140%	In Data Package
Method Blank	No target analytes > RL	Yes		In Data Package
Matrix Spike/Matrix Spike Duplicate (MS/MSD)	One set (MS/MSD) per group of field samples. Must contain all target analytes. (Recovery Limits 50 to 120%; RPD <30%)	No	MS/MSD RPD for Benzo(b)fluoranthene (31%)	In Data Package
Analytical Replicates	Analyze one sample in duplicate for each group of field samples (RPD < 30%)	Yes		In Data Package
Surrogate Recoveries	Calculate % recovery (30 to 150% recovery)	No	Sample L1503772-13 recovery out for 2-Methylnaphthalene-d10 (27%)	In Data Package
Internal Standard Areas	Within 50 to 200% of internal standards in continuing calibration check	Yes		Retained at Lab

\* The Quality Control Acceptance Criteria are general guidelines. If alternate criteria are used, they must be documented in this table.

**Table II-3: Quality Control Summary for the Analyses of Pesticides in Sediment, Tissue, and Water Matrices**

Method Reference Number: 8081B

<b>Quality Control (QC) Element</b>	<b>Acceptance Criteria*</b>	<b>Criteria Met? Yes/No</b>	<b>List results outside criteria (Cross-reference results table in data report)</b>	<b>Location of Results (Retained at Lab or in Data Package)</b>

## Certification Information

Last revised December 16, 2014

### The following analytes are not included in our NELAP Scope of Accreditation:

#### Westborough Facility

**EPA 524.2:** Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.

**EPA 8260C:** 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.

**EPA 8270D:** 1-Methylnaphthalene, Dimethylnaphthalene, 1,4-Diphenylhydrazine.

**EPA 625:** 4-Chloroaniline, 4-Methylphenol.

**SM4500:** Soil: Total Phosphorus, TKN, NO<sub>2</sub>, NO<sub>3</sub>.

**EPA 9071:** Total Petroleum Hydrocarbons, Oil & Grease.

#### Mansfield Facility

**EPA 8270D:** Biphenyl.

**EPA 2540D:** TSS

**EPA TO-15:** Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

### The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

#### Drinking Water

**EPA 200.8:** Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7:** Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;

**EPA 300.0:** Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**

**EPA 332:** Perchlorate.

**Microbiology:** **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

#### Non-Potable Water

**EPA 200.8:** Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;

**EPA 200.7:** Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;

**EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, EPA 350.1:** Ammonia-N, **LACHAT 10-107-06-1-B:** Ammonia-N, **SM4500NO3-F, EPA 353.2:** Nitrate-N, **SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**

**EPA 624:** Volatile Halocarbons & Aromatics,

**EPA 608:** Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

**EPA 625:** SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045:** PCB-Oil.

**Microbiology:** **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF.**
