# Breaking the LFGTE Permit Log Jam

Federal Combustion Rules put States on Shaky Ground

#### 16th Annual LMOP Conference and Project Expo

Presented by Matt Lamb, Sr. Scientist

January 31, 2013

SMITH+GARDNER

### State of LFGTE Permitting in North Carolina

Log Jam at Taylors Falls 1884

# Who is affected?

- Private developers seeking to permit gensets
- Universities pursuing carbon footprint reduction
- County governments scrambling to meet ARRA deadlines
- State Energy agency administering EECBG funds
- Private landfill operators facing NSPS deadlines

# What is Solid Waste?

### What is Contained Gaseous Material?

#### SMITH+GARDNER

# What is Solid Waste?

- Commercial and Industrial Solid Waste Incineration (CISWI) and Non-Hazardous Secondary Materials (NHSM) Rule amendments:
  - Deleted exemptions for generators
  - Redefined the term "contained gaseous materials"
  - Comments, rule stays, reconsiderations, lawsuits, and court orders
  - Amended rules remained in effect
  - Unattainable CO limit of 157 ppm SMITH+GARDNER

# Conflicting Comfort

- **EPA** issued several "comfort" letters
  - American Forest and Paper Assoc. (May 2011)
  - Waste Management, Inc. (August, 2011)
  - "burning of gaseous material... does not involve treatment or other management of a solid waste"

### BUT

- "Landfill gas is not a traditional fuel"
- NC DAQ confused by conflicting guidance
- Burden of proof on permittee SMITH+GARDNER

# Two Paths to Permits

# 1. Schedule of Compliance

- DAQ offered "Schedule of Compliance"
  - DAQ issues permit but considered permit holder non-compliant with CISWI
  - Offers SOC generous enough to allow reconsideration to become final
  - Risk borne by permittee
  - Difficult to finance a project that is noncompliant from day one

# 2. Force EPA Determination

#### **DAQ issued CISWI permit for an LFG flare**

DAQ hopes during EPA review CISWI would be determined non-applicable

#### OOPS

EPA issued permit as written, with CISWI conditions intact

# A Third Way

- Legitimacy Test
  - Demonstrate that landfill gas:
    - 1. Remains in control of the "generator"

#### OR

- 2. Is managed as a valuable commodity
- 3. Has significant heat content
- 4. Has contaminant levels comparable to traditional fuel

## **Cooperative Effort with DAQ**

#### Natural gas contaminants are difficult to identify/quantify

#### Evaluation of LFG contaminants against emission limits/factors

ppmv (unless otherwise noted)	Source	ppmv (unless otherwise noted)	Source	MW	CFM	lb/hr	tpy	EPA de minimis (tpy unless otherwise noted)	Notes

### Success!

- Three landfill gas to energy projects permitted
  - Developer
  - University
  - County
- All three are currently under construction

# **CISWI/NHSM Reconsideration Status**

- December 21, 2012: Reconsideration Rules are finalized
- Previous definition of "contained gaseous fuels" reinstated as:

"...gases that are in a container when the container is combusted"

SMITH+GARDNFR

# NC DAQ Status

- Rule implementation within 60 days of publish date
- To date, no notice has been published in the Federal Register
