RE: Radiological Survey of Right-of-Way Utility Excavation
Permit No.: DOT605528
Permit Address: 338 Lower North Michigan Avenue
AECOM Project No. 60494019

Dear Mr. Castanoli:

AECOM Technical Services, Inc. (AECOM) conducted radiological surface gamma survey of a trench excavation located at 338 Lower North Michigan Avenue, Chicago, Illinois. The survey was completed on April 12, 2016. The attached figure and sketch provide the approximate location and outline of the area surveyed.

Surveying was performed on the soil removed from a trench to address an upgrade to Michigan Avenue irrigation system. The excavation was a combination of two adjoining trenches with total approximate dimensions of 14-feet long, 6 to 10-feet wide, and 4 to 7-feet deep (refer to sketch).

The monitoring did not indicate that the fill soils were above the removal action level established by the U.S. Environmental Protection Agency (USEPA) for the Streeterville area of Chicago. The USEPA removal action level for Chicago's Streeterville area is 7.1 picocuries per gram (pCi/g) total radium (Ra-226 + Ra-228). Gamma radiation count measurements for the project were made using Ludlum Model 2221 survey meter and an unshielded 2 x 2 inch NaI probe (Model 44-10). The gamma count threshold indicative of the 7.1 pCi/g removal action level is 18,278 counts per minute (cpm) unshielded.

The field gamma measurements during the excavation process did not exceed the instrument threshold previously stated. During the excavation the gamma survey reading of the ranged from a minimum of 6,200 cpm to a maximum of 7,600 cpm unshielded. Thus, there was no indication of the presence of radiologically-contaminated material and/or an exceedance of the USEPA removal action level of 7.1 pCi/g total radium. A copy of the permit and a field sketch documenting the area where work was performed, have been included as attachments.

As part of the permit conditions, this letter has been forwarded to:

Chicago Department of Public Health
