Great Lakes Coastal Forecasting System

GLCFS

- Computer models that predict:
 - waves, temperature, currents, water levels, ice
- Nowcast every 6 hours
- 5-day forecast every 12 hours
- Scales of 0.5 km to 10 km

Great Lakes Forecasting System

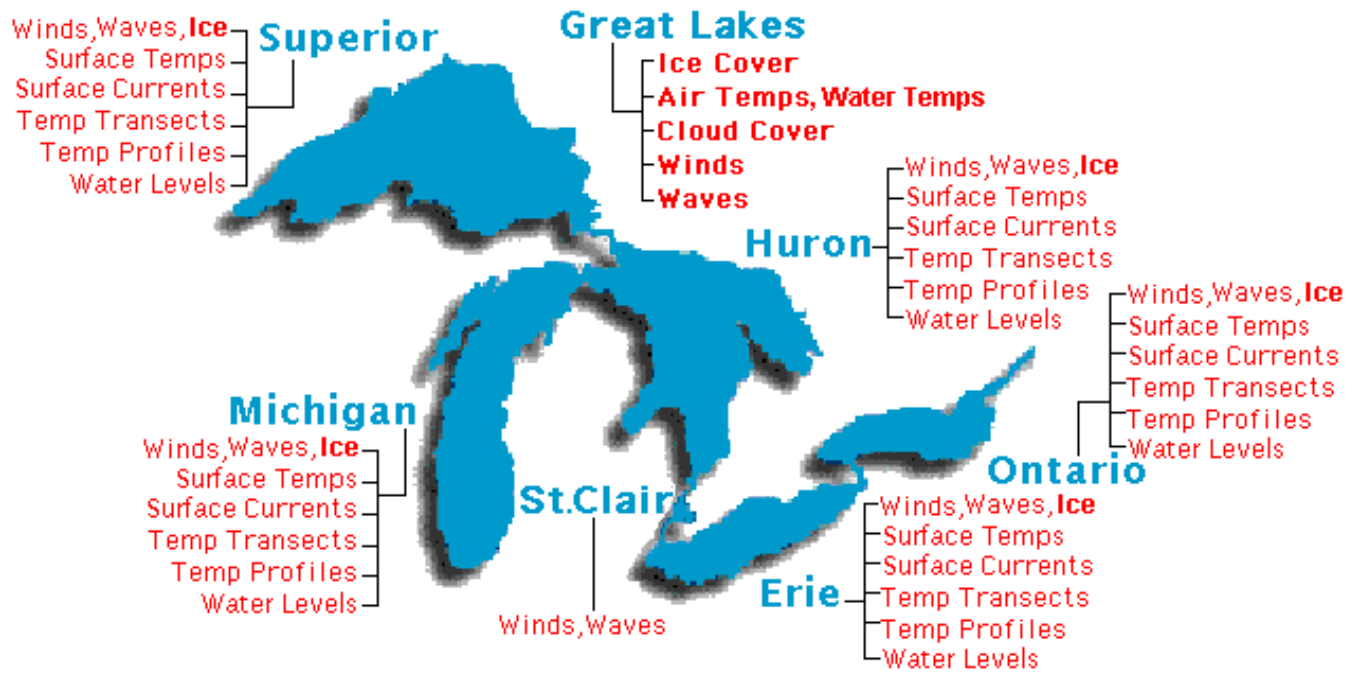

Nowcast every 6 hours
Forecast (5-day) every 12 hours

National Oceanic and Atmospheric Administration
Great Lakes Environmental Research Laboratory

Great Lakes Coastal Forecasting System, GLCFS

GLCFS NOWCAST: 08/07/2014 (DOY 219) 0000 GMT

Nowcasts are generally posted by about 0032, 0632, 1232, and 1832 GMT (subtract 4 for EDT, 5 for EST)

NOAA/GLERL Great Lakes Surface Currents Map

See Additional Currents: [Latest Depth-Averaged](#) | [3hrs Previous Depth-Averaged](#) | [Latest Surface](#) | [3hrs Previous Surface](#)
Updated four times per day at 3 and 9 Eastern Time

Valid:
2014-08-07
12:00 GMT

top speed: **28.3 cm/s**
average: **8.9 cm/s**

Monthly Depth-Averaged Currents for 2010-2013

Click on map to zoom; click and drag to pan. This animation may not work on all browsers.

The flow patterns depicted in these visualizations of lake currents are based on simulations from the [Great Lakes Coastal Forecasting System](#) operated by [NOAA's Great Lakes Environmental Research Laboratory](#).

The "Latest" and "3hrs Previous" visualizations depict water motion corresponding to a **snapshot** of lake currents at the present time and three hours previous to the present time. Lake currents can change rapidly with changing wind conditions.

Great Lakes Ice Classification

Parameter: Lake ice type and location
Decision Support: Safety of lake transportation

Lake Superior Research Ice Classification

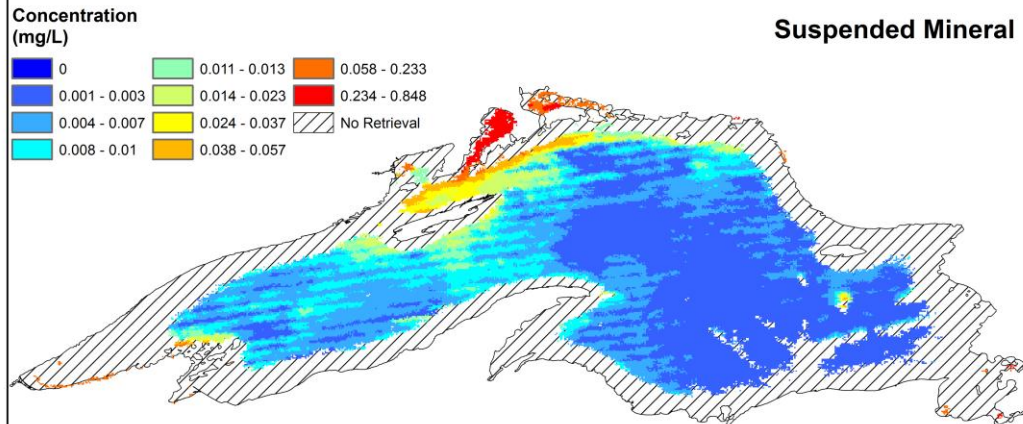

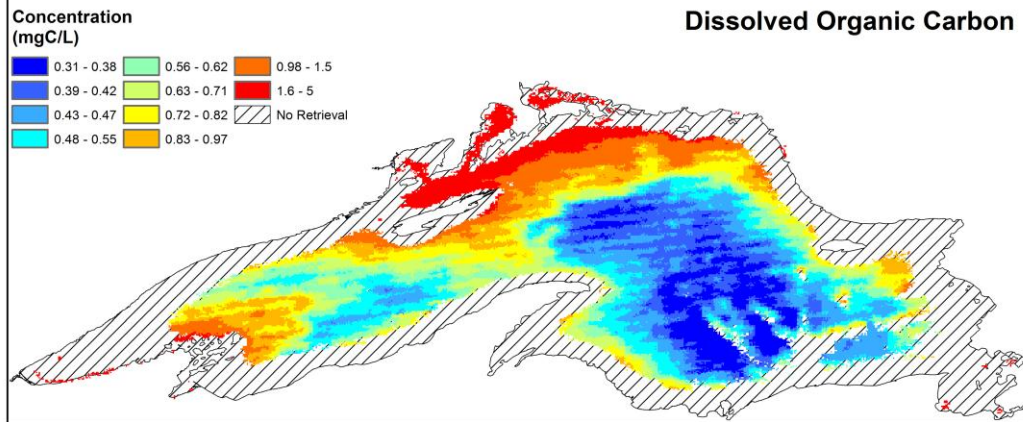

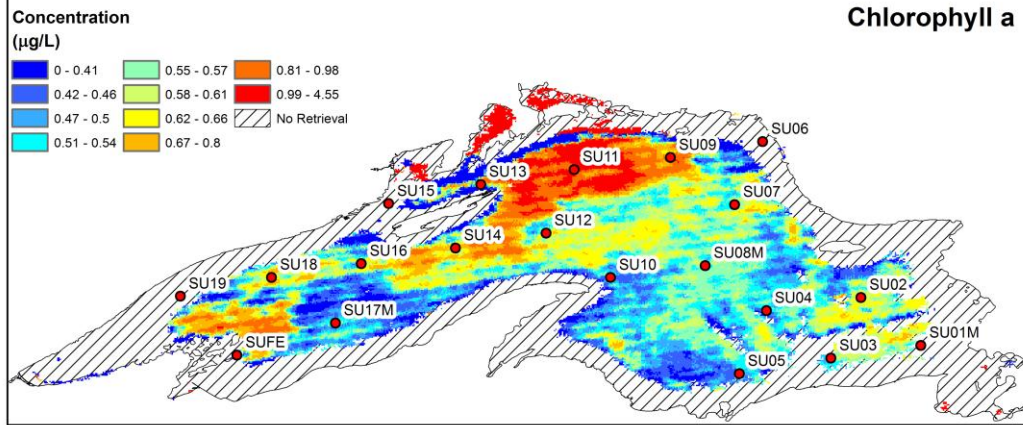

- | | | | |
|--|--|---|--|
|  New lake ice |  Consolidated ice floes |  Stratified ice |  Pancake ice |
|  Lake ice with crusted snow |  Brash ice |  Noise ($<-20\text{dB}$) |  Unclassified |
