The data in this file are from monitoring conducted by the Bay Area Air Quality Management District. While EPA's monitoring at this school has ended, the BAAQMD has agreed to continue studying in Cupertino because of community concerns about emissions from a local cement plant. The BAAQMD will continue monitoring for hexavalent chromium at the school for a full year. Data from that monitoring will be posted on this site. The air district will also be initiating further studies of air pollution in Cupertino, closer to the cement plant. Results from these additional studies will be available at the air district Web site (<http://www.baaqmd.gov/>)
