TREATMENT OF RAINWATER CONTAMINATED BY #6 FUEL OIL FROM BASEMENT BUNKER

DEMOLITION OF 300 MERRIMACK STREET LAWRENCE, MA

JTS Group, Inc. has been retained by S&R Corporation of Lowell Massachusetts to provide the design and implementation of a treatment system to manage the water from the basement of 300 Merrimack Street in Lawrence, MA which is undergoing demolition.

Site Owner: 300 Merrimack Street LLC
354 Merrimack Street
Lawrence, MA 01848

Contact: Donald Rist Facilities Manager
978-681-7777

Contract is funded by the City of Lawrence

Contract Name: Riverwalk Abatement, Demolition and Backfill
280-350 Merrimack Street, Lawrence

History:

The site was developed as a textile mill in the 1800's along with the buildings to the east along the Merrimack River. The concrete structure at 300 Merrimack Street was erected to store coal to fire the boilers in the building abutting to the west, 280 Merrimack Street. The bunkers were converted to store #6 fuel oil. The bunkers were emptied of the fuel oil leaving a skim on the concrete walls, floor and support columns. A thin non contiguous film of fuel oil appears on the surface of the rain water which has collected in the bunkers as the roofing has been deteriorating for several years. The bunkers have been divided into three oil storage tanks. Two measure approximately 45 feet by 90 feet and the third approximately 45 feet by 75 feet. Each has a storage capacity of 550,000 gallons and 450,000 respectively. The larger tanks calculate at 35,000 gallons per vertical foot and the smaller tank 28,000 gallons per vertical foot. Water measured in the three bunkers calculated to a total of 160,000 gallons.

The water was sampled from the bunkers, and submitted to Geolabs, Inc of Braintree, MA for analysis of the Appendix III parameters.

Notable responses were for TPH as #6 oil, PAHs, Phthalate esters and PCB. The PCB was reported as Aroclor 1016/1242 at 4.72 ug/L. It is from an unidentified source. The

phthalate esters are consistent with the textile industry and the TPH and PAH are likely from the #6 Fuel oil.

Other contaminants include copper, lead, arsenic and iron.

The Treatment system design includes a 5 micron bags filter located before the 22,000 gallon feed tank. The bag is designed to control particulates and heavy fuel oil.

The frac tank will store the feed water and separate any fuel oil which passes through the bag filter. The water will be passed through two 1000 pound Granulated Activated Carbon (GAC) filters to remove the petroleum hydrocarbons, the poly aromatic hydrocarbons, the phthalate esters, the polychlorinated biphenyls (PCB) and to a lesser extent the metals.

The flow rate will be 40-45 gallons per minute yielding a retention time of greater than 10 minutes in the Activated Carbon tanks.

The water will then be stored in 22,000 gallon frac tanks pending laboratory analysis for the contaminants of concern; TPH, PCB, PAH Iron, lead and copper. Once the lab results report the water meets or exceeds discharge standards it will be released in a batch to the storm drain which discharges to the Merrimack River <100 feet to the north.

Merrimack River:

Flow rate dilution factor is 4140 times at the Lowell Station. Flow rates past the subject site will be higher.

Endangered species include the Sturgeon. No impact from the treated water is anticipated as the water will be cleaner than the river water.

B. Suggested Form for Notice of Intent (NOI) for the Remediation General Permit

1. General site information. Please provide the following information about the site:

a) Name of facility/site: 300 Merrimack Street LLC		Facility/site address: 300 Merrimack Street	
Location of facility/site: longitude: -71.147215 latitude: 42.704430	Facility SIC code(s): n/a	Street: 300 Merrimack Street	
b) Name of facility/site owner: 300 Merrimack Street LLC		Town: Lawrence	
Email address of owner: slupoli@sals-pizza.com	State: MA	Zip: 01848	Co
Telephone no. of facility/site owner: 978-681-7777			
Fax no. of facility/site owner:		Owner is (check one): 1. Federal ___ 2. State/Tribal ___	
Address of owner (if different from site):		3. Private ☒ 4. other, if so, describe:	
Street: 354 Merrimack Street			
Town: Lawrence	State: MA	Zip: 01848	County: Essex
c) Legal name of operator: JTS Group, Inc.		Operator telephone no: 508-791-3775	
		Operator fax no.: 508-798-9134	Operator email: jtsdill@c
Operator contact name and title: Jeffery L. Dill CHMM - President			
Address of operator (if different from owner):		Street: 74 William Street	
Town: Worcester	State: MA	Zip: 01609	County: Worcester
d) Check "yes" or "no" for the following:			
1. Has a prior NPDES permit exclusion been granted for the discharge? Yes ___ No ☒ , if "yes," number:			
2. Has a prior NPDES application (Form 1 & 2C) ever been filed for the discharge? Yes ___ No ☒ , if "yes," date and tracking #:			
3. Is the discharge a "new discharge" as defined by 40 CFR 122.2? Yes ☒ No ___			
4. For sites in Massachusetts, is the discharge covered under the MA Contingency Plan (MCP) and exempt from state permitting? Yes ___ No ☒			

e) Is site/facility subject to any State permitting or other action which is causing the generation of discharge? Yes <u> </u> No <u> </u> ☒ If "yes," please list: 1. site identification # assigned by the state of NH or MA: 2. permit or license # assigned: 3. state agency contact information: name, location, and telephone number:	f) Is the site/facility covered by any other EPA permit, including: 1. multi-sector storm water general permit? Y <u> </u> N <u> </u> ☒, if Y, number: 2. phase I or II construction storm water-general permit? Y <u> </u> N <u> </u> ☒, if Y, number: 3. individual NPDES permit? Y <u> </u> N <u> </u> ☒, if Y, number: 4. any other water quality related permit? Y <u> </u> N <u> </u> ☒, if Y, number:
--	---

2. Discharge information. Please provide information about the discharge, (attaching additional sheets as needed) including:

a) Describe the discharge activities for which the owner/applicant is seeking coverage: Treatment of rainwater from the basement of the structures undergoing demolition. The basement was originally coal bunkers used to feed the adjacent boiler plant. The coal bunkers were converted to store #6 fuel oil which is contaminating the rainwater.	
b) Provide the following information about each discharge:	1) Number of discharge points: one 2) What is the maximum and average flow rate of discharge (in cubic feet per second, ft³/s)? Max. flow <u>0.223</u> Average flow <u>0.05</u> Is maximum flow a design value? Y <u> </u> N <u> </u> ☒ For average flow, include the units and appropriate notation if this value is a design value or estimate if not available.
3) Latitude and longitude of each discharge within 100 feet: pt.1: long. <u>-71.147215</u> lat. <u>42.704430</u>; pt.2: long. <u> </u> lat. <u> </u>; pt.3: long. <u> </u> lat. <u> </u>; pt.4: long. <u> </u> lat. <u> </u>; pt.5: long. <u> </u> lat. <u> </u>; pt.6: long. <u> </u> lat. <u> </u>; pt.7: long. <u> </u> lat. <u> </u>; pt.8: long. <u> </u> lat. <u> </u>; etc.	
4) If hydrostatic testing, total volume of the discharge (gals): 5) Is the discharge intermittent ☒ or seasonal <u> </u>? Is discharge ongoing Yes <u> </u> No <u> </u> ☒ ? <u> </u>	
c) Expected dates of discharge (mm/dd/yy): start <u>07/21/09</u> end <u>08/31/09</u>	
d) Please attach a line drawing or flow schematic showing water flow through the facility including: 1. sources of intake water, 2. contributing flow from the operation, 3. treatment units, and 4. discharge points and receiving waters(s).	

3. Contaminant information. In order to complete this section, the applicant will need to take a minimum of one sample of the untreated water and have it analyzed for **all** of the parameters listed in Appendix III. Historical data, (i.e., data taken no more than 2 years prior to the effective date of the permit) may be used if obtained pursuant to:
i. Massachusetts' regulations 310 CMR 40.0000, the Massachusetts Contingency Plan ("Chapter 21E"); ii. New Hampshire's Title 50 RSA 485-A: Water Pollution and Waste Disposal or Title 50 RSA 485-C: Groundwater Protection Act; or iii. an EPA permit exclusion letter issued pursuant to 40 CFR 122.3, provided the data was analyzed with test methods that meet the requirements of this permit. Otherwise, a new sample shall be taken and analyzed.

a) Based on the analysis of the sample(s) of the untreated influent, the applicant must check the box of the sub-categories that the potential discharge falls within.

Gasoline Only	VOC Only	Primarily Metals	Urban Fill Sites	Contaminated Sumps	Mixed Contaminants	Aquifer Testing
Fuel Oils (and Other Oils) only	VOC with Other Contaminants	Petroleum with Other Contaminants ☒	Listed Contaminated Sites	Contaminated Dredge Condensates	Hydrostatic Testing of Pipelines/Tanks	Well Development or Rehabilitation

b) Based on the analysis of the untreated influent, the applicant must indicate whether each listed chemical is **believed present** or **believed absent** in the potential discharge. Attach additional sheets as needed.

PARAMETER	Believe Absent	Believe Present	# of Samples (1 minimum)	Type of Sample (e.g., grab)	Analytical Method Used (method #)	Minimum Level (ML) of Test Method	Maximum daily value		Avg. daily value

Other (describe):										

c) For discharges where **metals** are believed present, please fill out the following:

Step 1: Do any of the metals in the influent have a reasonable potential to exceed the effluent limits in Appendix III (i.e., the limits set at zero to five dilutions)? Y ☒ N ☐	If yes, which metals? copper, lead, iron
Step 2: For any metals which have reasonable potential to exceed the Appendix III limits, calculate the dilution factor (DF) using the formula in Part I.A.3.c) (step 2) of the NOI instructions or as determined by the State prior to the submission of this NOI. What is the dilution factor for applicable metals? Metals: copper 2070, lead 430, iron 5000 DF: 4142	Look up the limit calculated at the corresponding dilution factor in Appendix IV . Do any of the metals in the influent have the potential to exceed the corresponding effluent limits in Appendix IV (i.e., is the influent concentration above the limit set at the calculated dilution factor)? Y ☒ N ☐ If "Yes," list which metals: iron

4. Treatment system information. Please describe the treatment system using separate sheets as necessary, including:

a) A description of the treatment system, including a schematic of the proposed or existing treatment system:					
b) Identify each applicable treatment unit (check all that apply):	Frac. tank ☒	Air stripper	Oil/water separator	Equalization tanks	Bag filter ☒
	Chlorination	Dechlorination	Other (please describe):		
c) Proposed average and maximum flow rates (gallons per minute) for the discharge and the design flow rate(s) (gallons per minute) of the treatment system: Average flow rate of discharge 40 Maximum flow rate of treatment system 50 Design flow rate of treatment system 40					
d) A description of chemical additives being used or planned to be used (attach MSDS sheets): none					

5. Receiving surface water(s). Please provide information about the receiving water(s), using separate sheets as necessary:

a) Identify the discharge pathway:	Direct	Within facility	Storm drain ☒	River/brook	Wetlands	Other (describe):
b) Provide a narrative description of the discharge pathway, including the name(s) of the receiving waters: Storm drain on property to Merrimack River <100 feet to north						
c) Attach a detailed map(s) indicating the site location and location of the outfall to the receiving water: 1. For multiple discharges, number the discharges sequentially. 2. For indirect discharges, indicate the location of the discharge to the indirect conveyance and the discharge to surface water The map should also include the location and distance to the nearest sanitary sewer as well as the locus of nearby sensitive receptors (based on USGS topographical mapping), such as surface waters, drinking water supplies, and wetland areas.						
d) Provide the state water quality classification of the receiving water Merrimack River Class SB						
e) Provide the reported or calculated seven day-ten year low flow (7Q10) of the receiving water 930 cfs Please attach any calculation sheets used to support stream flow and dilution calculations.						
f) Is the receiving water a listed 303(d) water quality impaired or limited water? Yes No ☒ If yes, for which pollutant(s)? Is there a TMDL? Yes No ☒ If yes, for which pollutant(s)?						

6. Results of Consultation with Federal Services: Please provide the following information according to requirements of Part I.B.4 and Appendices II and VII.

- a) Are any listed threatened or endangered species, or designated critical habitat, in proximity to the discharge? Yes ☒ No ☐
Has any consultation with the federal services been completed? Yes ☒ No ☐ or is consultation underway? Yes ☐ No ☒
What were the results of the consultation with the U.S. Fish and Wildlife Service and/or National Marine Fisheries Service (check one):
a "no jeopardy" opinion? ☐ or written concurrence ☐ on a finding that the discharges are not likely to adversely affect any endangered species or critical habitat?
- b) Are any historic properties listed or eligible for listing on the National Register of Historic Places located on the facility or site or in proximity to the discharge?
Yes ☐ No ☒ Have any state or tribal historic preservation officer been consulted in this determination (Massachusetts only)? Yes ☐ No ☒

7. Supplemental information :

Please provide any supplemental information. Attach any analytical data used to support the application. Attach any certification(s) required by the general permit.

8. Signature Requirements: The Notice of Intent must be signed by the operator in accordance with the signatory requirements of 40 CFR Section 122.22, including the following certification:

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, I certify that the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I certify that I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Massachusetts Funding Cuts Will Lead to Loss of Critical Streamflow Information

In response to recent budget reductions for the Commonwealth of Massachusetts for fiscal year 2010, the Massachusetts Department of Conservation and Recreation (DCR) will be reducing their support for the USGS streamgaging program in many basins across Massachusetts. As a result, 18 of the 93 streamgages funded by DCR in Massachusetts will be discontinued. On July 1, 2009, data collection at 13 of the 18 streamgages was discontinued. The USGS will continue to collect data at five of the most critical of the 18 streamgages while alternative sources of funding are sought. However, these five streamgages will be discontinued in 2010 if no other funding sources are secured.

If any Federal, State or local agencies are interested in providing additional funds to operate any of these stations, please contact: Wayne Sonntag, Director, Massachusetts-Rhode Island Water Science Center, at 508-490-5002 or by e-mail at wsonntag@usgs.gov or Gardner Bent at (508) 490-5041 or by e-mail at gbent@usgs.gov

Further detailed information on the loss of critical streamflow information is available in a Congressional Notification letter at: [Notification MA streamgages 06.09.pdf](#)

Discontinued July 1, 2009

USGS 01100000 MERRIMACK RIVER BL CONCORD RIVER AT LOWELL, MA PROVISIONAL DATA SUBJECT TO REVISION

Available data for this site Time-series: Real-time data

GO

LOCATION--Lat 42° 38'45", long 71° 17'56", Middlesex County, Hydrologic Unit 01070002, on right bank at Lowell, 1,100 ft downstream from Concord River.

DRAINAGE AREA--Total above gage, 4,635 mi²; net above gage, 4,421 mi²--excludes 214 mi² for use of Boston metropolitan district and city of Worcester.

PERIOD OF RECORD--Discharge: June 1923 to current year. Water-quality records: Water years 1954, 1966-74, 1999.

GAGE--Water-stage recorder with satellite telemeter. Datum of gage is 5.18 ft above National Geodetic Vertical Datum of 1929. Prior to Mar. 7, 1934, at Boot Mills, 1,800 ft upstream and 700 ft above mouth of Concord River, in same gage pool and at same datum; gage-height record (provided by Proprietors of the Locks and Canals on Merrimack

River) was indicative of flow including that of Concord River.

REMARKS--Daily discharge includes water released from 210 mi² in basins of Sudbury and Nashua Rivers and Lake Cochituate. Flow regulated by powerplants, by Franklin Falls Reservoir since 1942, and by Squam, Newfound, Winnepesaukee, Winnisquam, and other lakes and reservoirs upstream.

COOPERATION BY--Massachusetts Department of Environmental Protection, Division of Watershed Management, Massachusetts Department of Conservation and Recreation, and U.S. Geological Survey Federal Network

This station managed by the Northborough, MA Field Office.

FAX: (508) 798-9134

Project: 300 Merrimack St-Sal's
Location:

Order No.: 0906393

Dear Jeff Dill:

GeoLabs, Inc. received 1 sample(s) on 6/26/2009 for the analyses presented in the following report.

This report is being re-issued with TBA, TAME, 1,4-Dioxane, and 13 PPM. All data for associated QC met method or laboratory specifications, except when noted in the Case Narrative.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Charles Morrow
Laboratory Director

For current certifications, please visit our website at www.geolabs.com

Certifications:

CT (PH-0148) - MA (M-MA015) - NH (2508) - NJ (MA009) - NY (11796) - RI (LA000252)
Accredited in Accordance with NELAC

Date: 13-Jul-09

CLIENT: JTS Group, Inc.
Project: 300 Merrimack St-Sal's
Lab Order: 0906393

CASE NARRATIVE

Physical Condition of Samples

The project was received by the laboratory in satisfactory condition. The sample(s) were received undamaged, in appropriate containers with the correct preservation.

Project Documentation

The project was accompanied by satisfactory Chain of Custody documentation.

Analysis of Sample(s)

All extractable samples were extracted and analyzed and any Volatile samples were analyzed within method specified holding times and according to GeoLabs documented Standard Operating Procedure. No analytical anomalies or non-conformances were noted by the laboratory during the processing of these samples. Prep Comments for 3510_PCB, Sample 0906393-001A: 40% emulsion

ANALYTICAL REPORT

Reported Date: 07-Jul-09

CLIENT: JTS Group, Inc.
 Lab Order: 0907041
 Project: Sal's - 300 Merrimack St
 Lab ID: 0907041-001

Client Sample ID: Bunker #6 Oil
 Collection Date: 7/2/2009 1:01:00 PM
 Date Received: 7/3/2009
 Matrix: WASTE WATER
