Montrose TGRS System Construction Update #4

Work Completed in June: The major work this month was completion of the treatment plant pad backfill and compaction on the Montrose property. The excavation for the bore pit on Montrose property began. The pipeline will need run underneath the railroad tracks along Normandie Ave. and the bore pit is needed for the installation procedure. The pipeline and well head installation has been completed at Del Amo and Vermont Streets. Montrose received a permit from the County of Los Angeles to proceed with pipeline installation in the Javelin St residential area. It is important that the work be completed in this area during non-school days. EPA went door-to-door in the residential area prior to start of excavation to inform nearby residents of Construction.

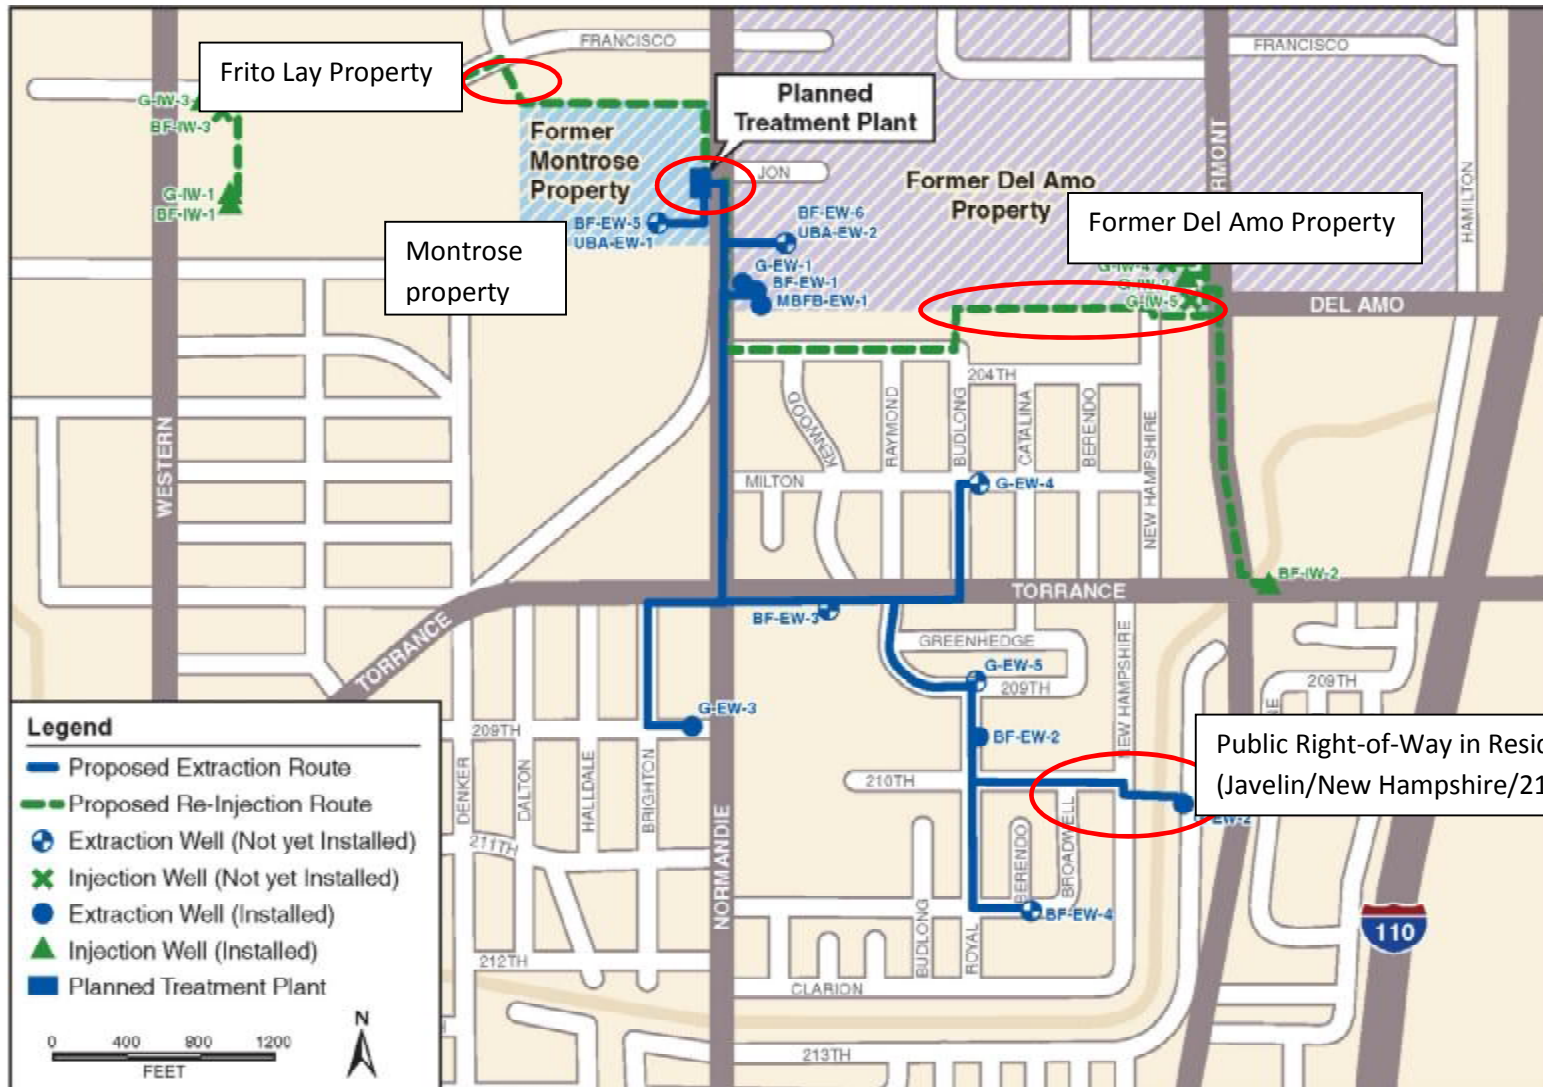

EPA conducted five work inspections and found all work was conforming to approved design, and good construction practices were being used. There were no exceedances of noise levels outside the Montrose property. The dust monitoring was comprehensive and, with a few minor exceptions, was in compliance with project requirements.
